

Manage Files and Folders

01

Dad, you do all the work on your laptop. Do you have a lot of files?

Yes Ryan, I have many files on my laptop.

I save my files in different folders and drives. Let me show you.

But your desktop looks so clean. Where do you keep your files?

Just like the shelf is used to keep the books properly, same way we can use folders on the computer to keep files properly.

Bytes

A file or folder can be saved anywhere in the computer. Two or more files or folders with same name can not be saved in the same location.

1. Manage Files and Folders

Recall:

Create a new file in Notepad:

1. Open Notepad with Windows search box.
2. Type in the notepad.
3. Click on File and then Save As.
4. Give the file a proper name.

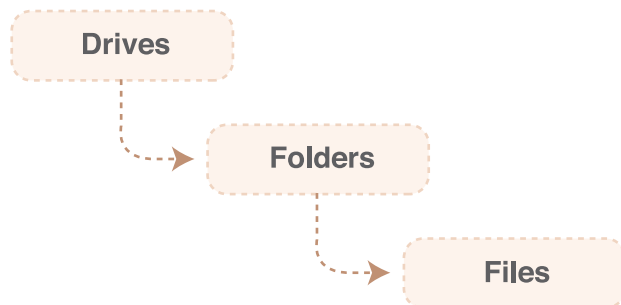

Create a new folder:

1. Right click on the empty space where you want to create a folder.
2. A box will appear, click on New.
3. Click on create New Folder.
4. Give a name to the folder.

A **File System** is the computer's way to organise files and folders. A file system has :

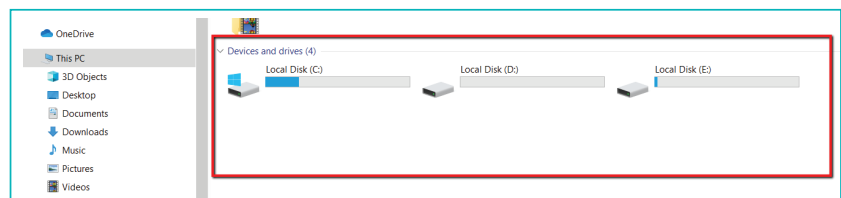

- Drives
- Folders
- Files

We need to manage Data properly, just like objects in our daily life. We must save everything in the correct location with a proper name. So that we can find our data easily when we want to.

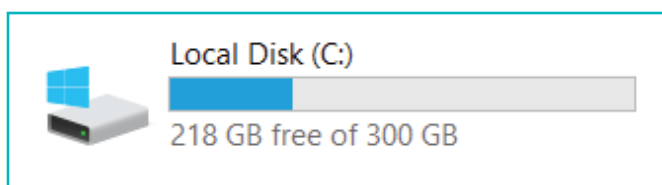

Drives

- Files are stored in Folders. The folders are stored in Drives.
- We can see the drives when we open **This PC** from the Desktop.

Drives are usually named **Local Disk** followed by an English alphabet label, such as (C:), (D:), and (E:). Some computers may have just one drive (only C: drive).

C: Drive

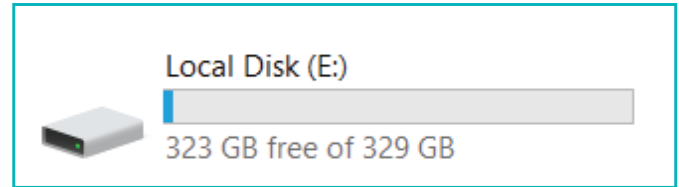

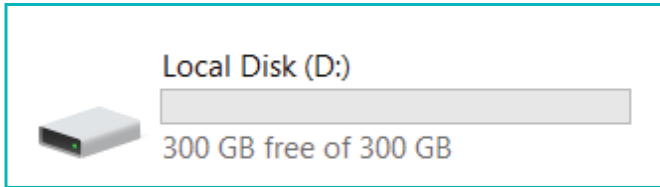

C: Drive is the most important drive in the computer. It is present in all Windows-based computers. All the software are saved in C: drive.

For example, Notepad, Sketchbook.

1. Manage Files and Folders

Other Drives

Some computers may have other drives. They can be identified by label (D:), (E:), or any other alphabet except (C:).

Hard Disk

All the drives are part of the computer's Hard Disk. Hard disk is a memory device used as a storage.

Bytes

A **Memory Device** is a computer hardware that saves information.
