

Digital Essentials: Files and Folders

A guide to understanding and organizing your digital world.

What are different types of files?

Your computer holds many different types of information. Text, photos, music, and videos are all stored as distinct items called Files.

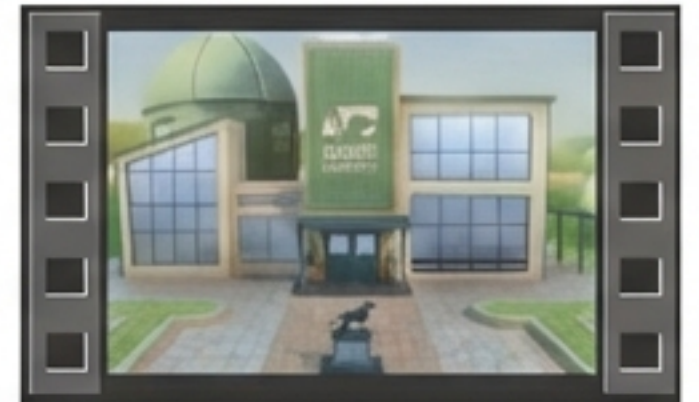

Text Document

Photo

Music

Video

Icons tell you what is inside.

You don't need to open a file to know what it is. The picture on the icon gives you a clue.

A musical note indicates a song or sound file.

The blue 'W' indicates a written document.

“What are these yellow colored icons?”

I see them everywhere.

You will see these yellow icons frequently on your screen. They are not files—they are something different.

These are called Folders.

Folders are used to store different types of files. Just like a physical backpack or a desk drawer, they keep your digital items together in one place.

Empty Folder

Folder with Files

Why do we use Folders?

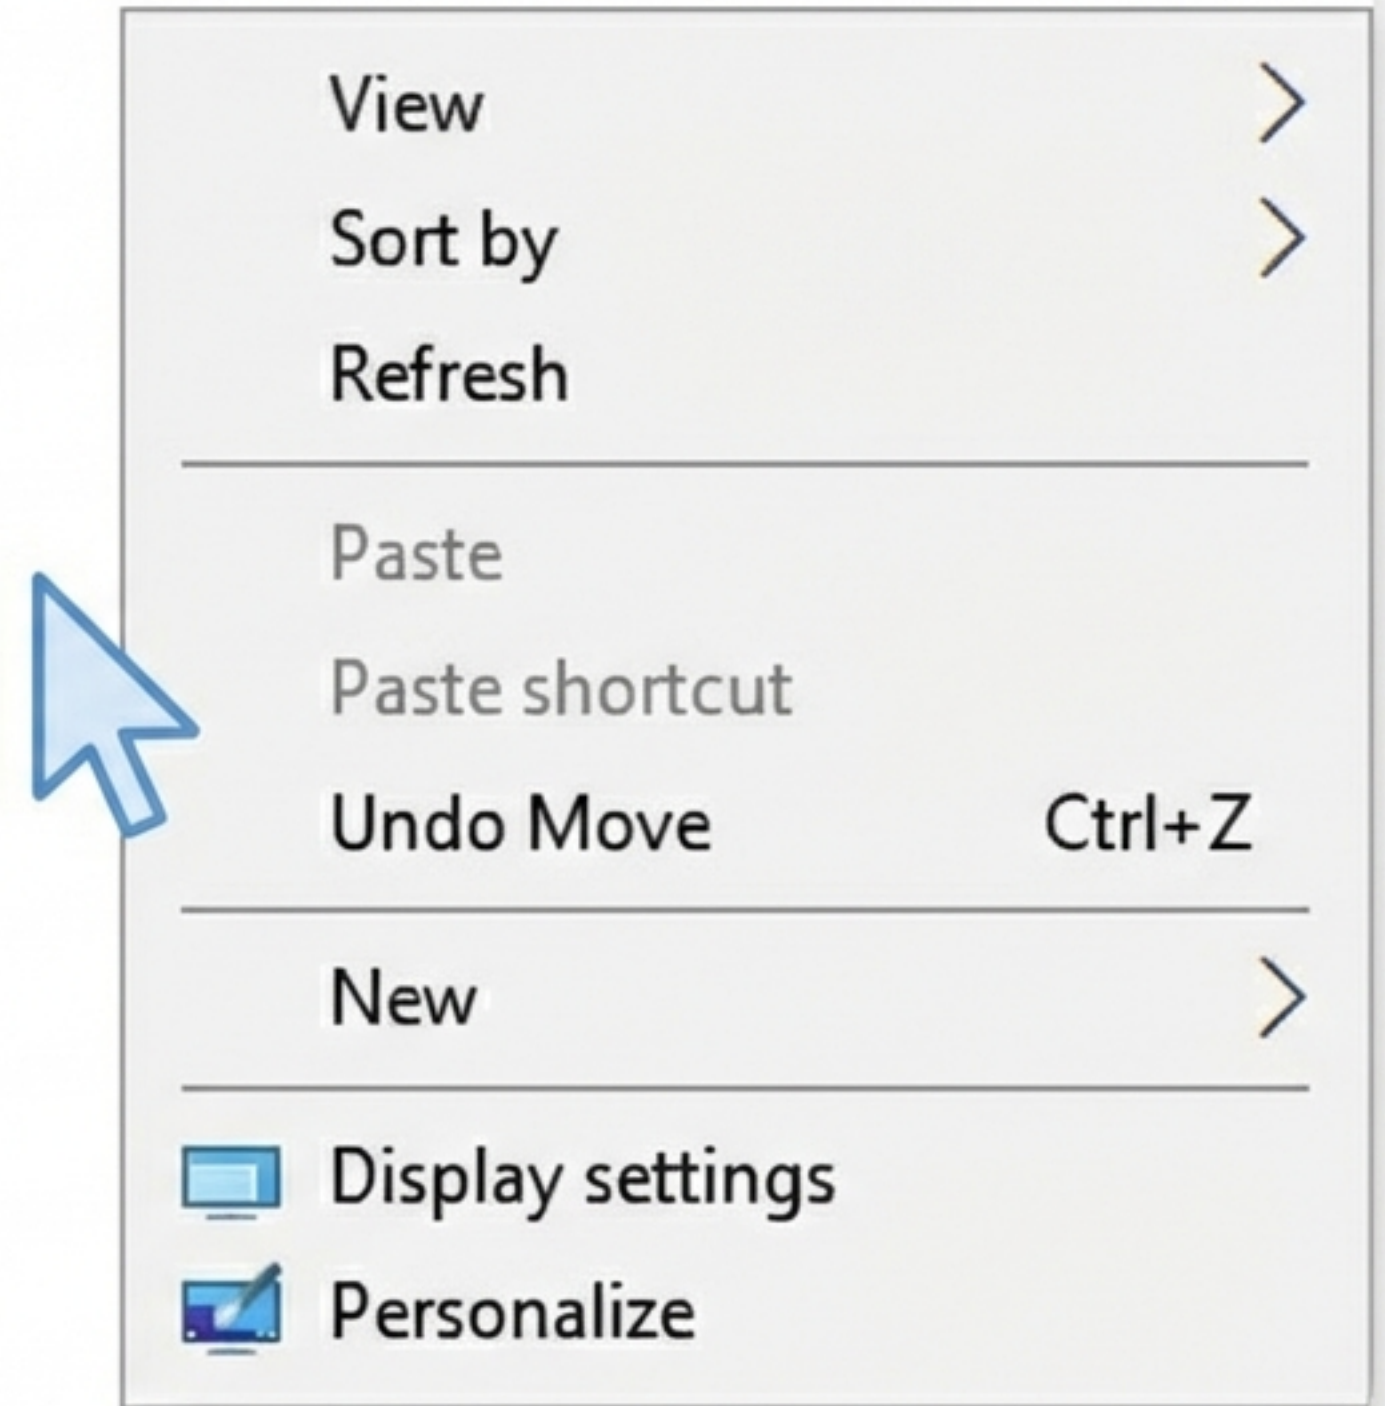

"This will also help you to find them easily."

Without folders, your files would be scattered across your screen. By grouping similar items together, you keep your computer organized.

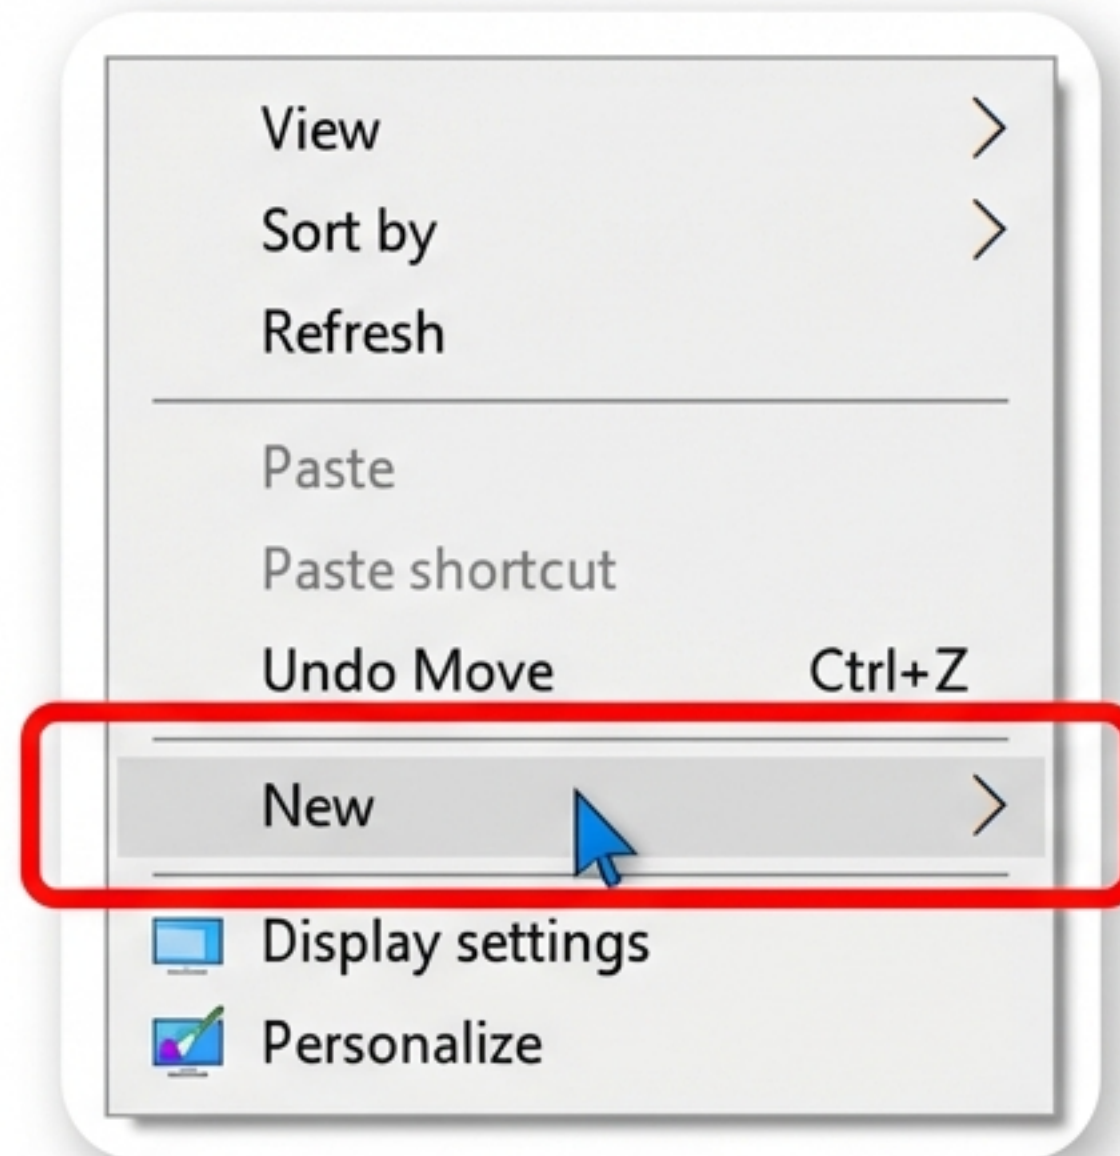

Step 1: Open the Menu

To create a new folder, find a blank space on your screen and Right-Click your mouse. A menu list will appear.

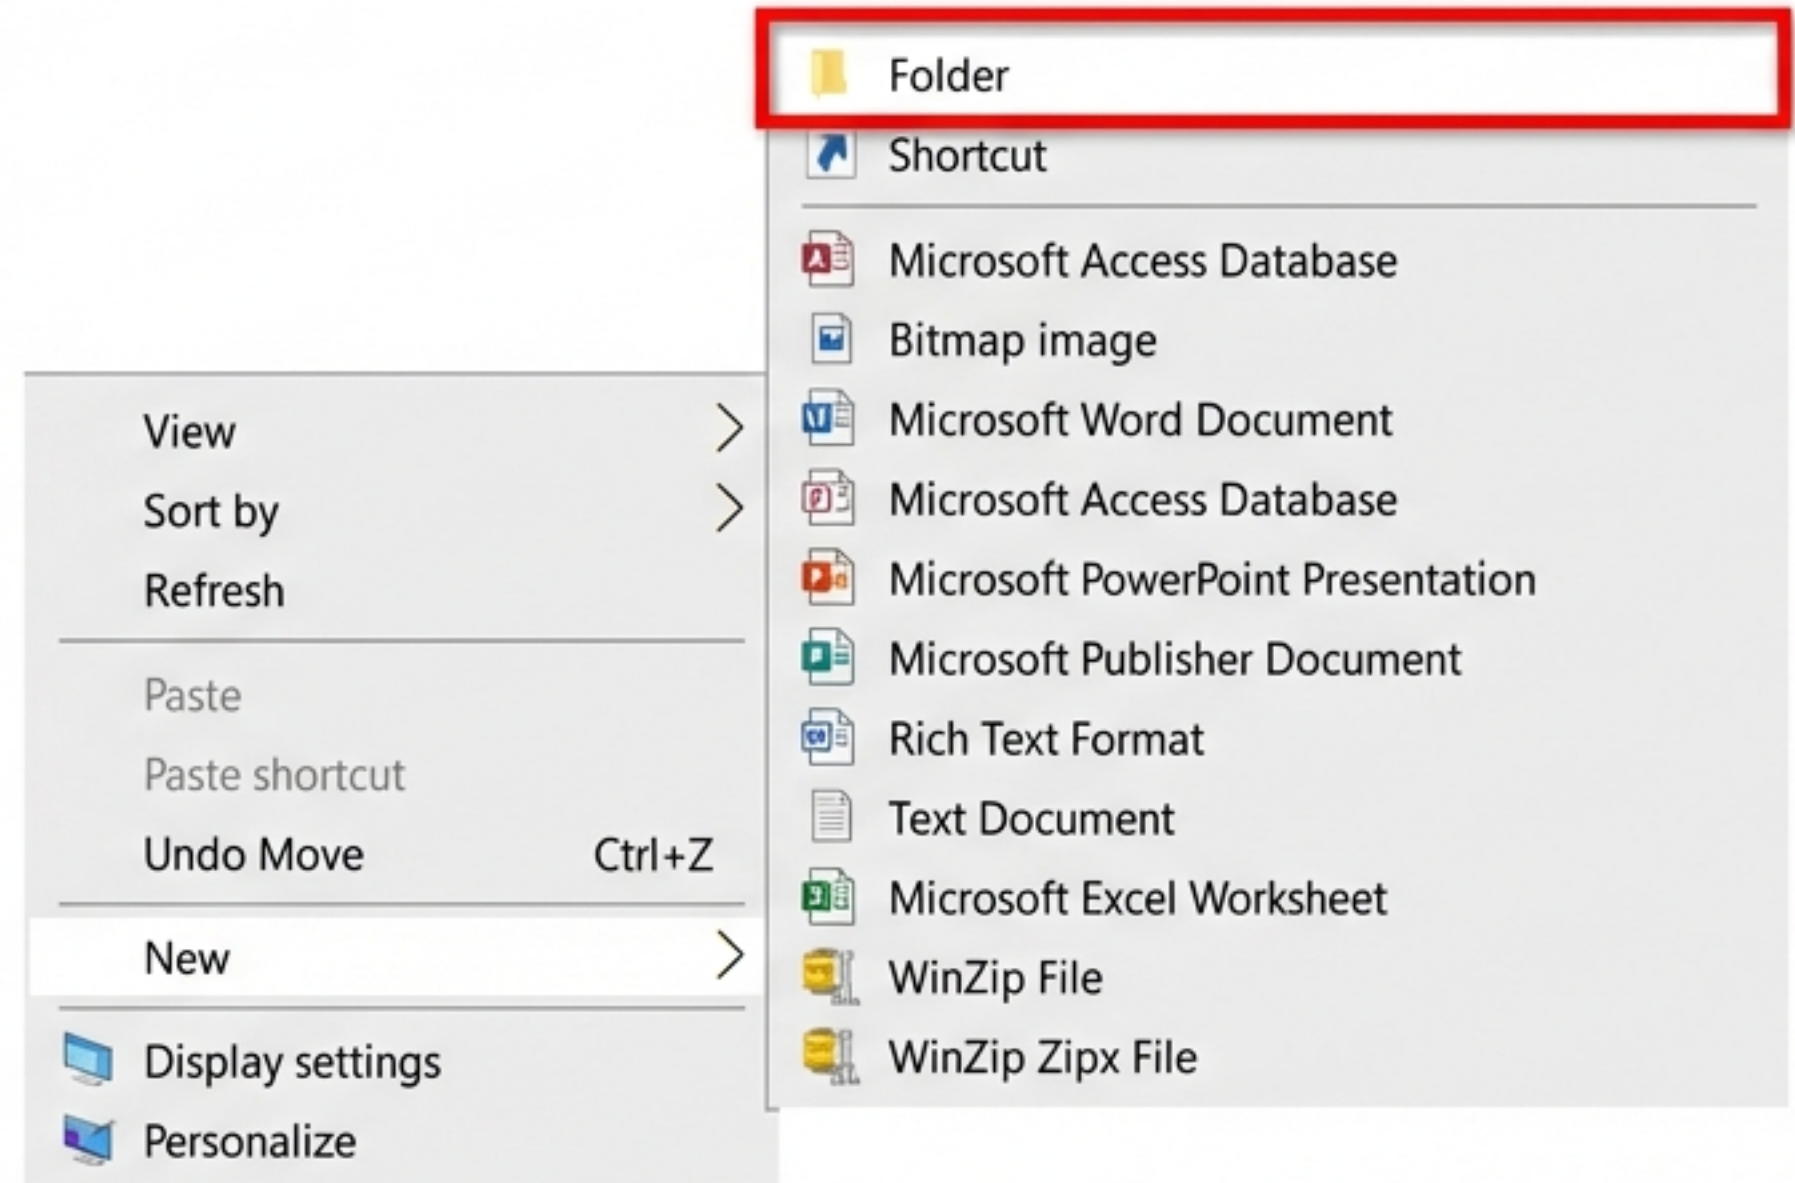

Step 2: Select "New"

Move your mouse cursor down the list. Hover over the word New.

Step 3: Choose 'Folder'

A second menu will slide out to the right. Click on the Folder option at the very top of this new list.

Step 4: The New Folder Appears

A folder icon will appear on your screen titled "New folder". The text is highlighted in blue, which means it is waiting for you to name it.

Step 5: Name Your Folder

Type the name you want (for example, 'Homework') and press the Enter key. Your folder is now ready to use!

Homework

You are ready to organize!

"Oh! So, I can make different folders to keep my files."

- ✓ - Files contain your information.
- ✓ - Folders keep files organized.
- ✓ - Right-Click > New > Folder to create your own.
