

Part 1 – Switch on the Desktop

For a desktop computer to switch on the CPU:

Step 1: Devices are connected to the CPU with wires. All the wires must be connected properly.

Step 2: Switch on the main power plug connection.

Note: Do this only under elder's supervision.

Step 3: On the CPU, we can see a button with a 'power sign' on it. This looks like a 1 with a 0 around it. Press the 'Power' button once gently. This will turn on the computer.
