The Puzzle

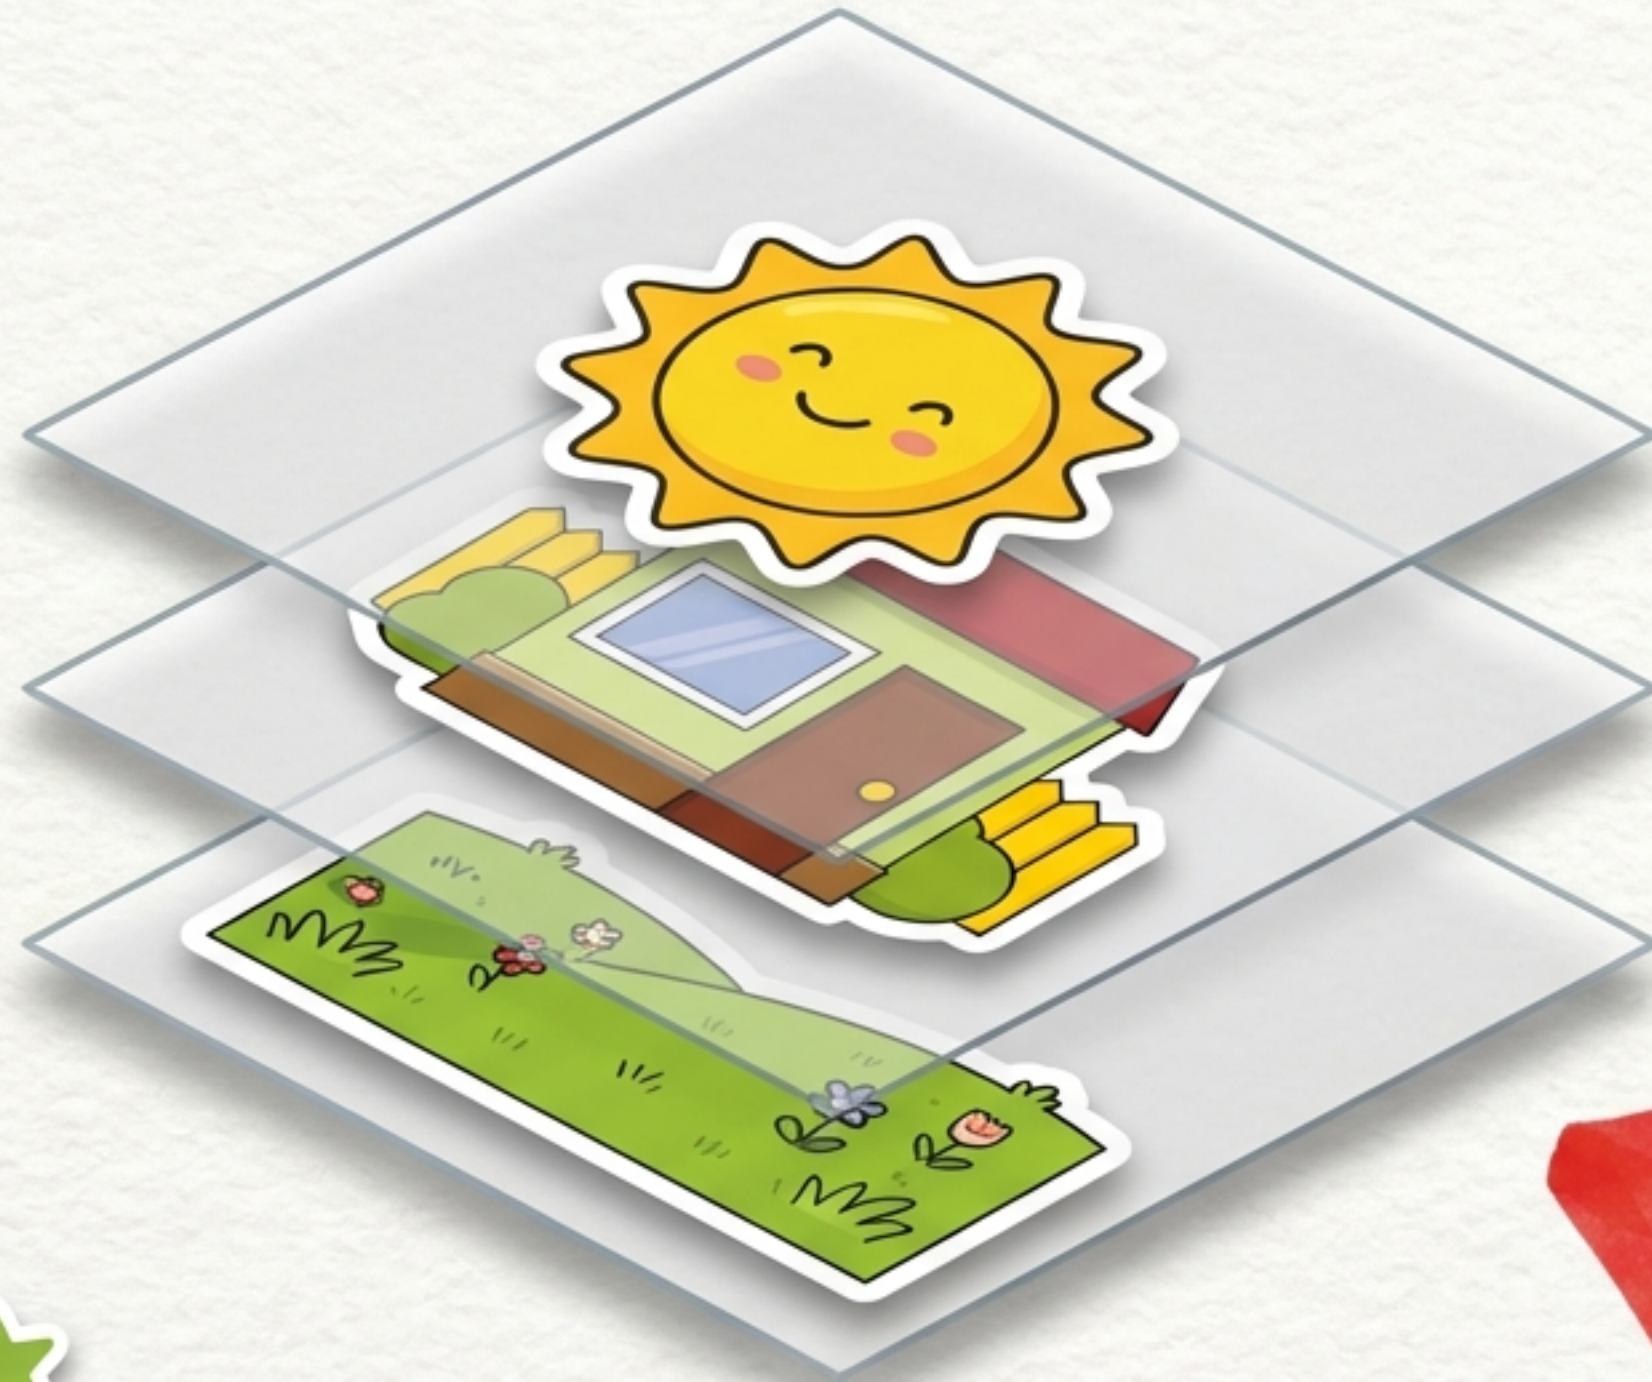

I drew a sun, but I
want to hide it
behind the house!
If I draw over it,
it looks messy.

How do we fix
this?

The Answer:
Layers

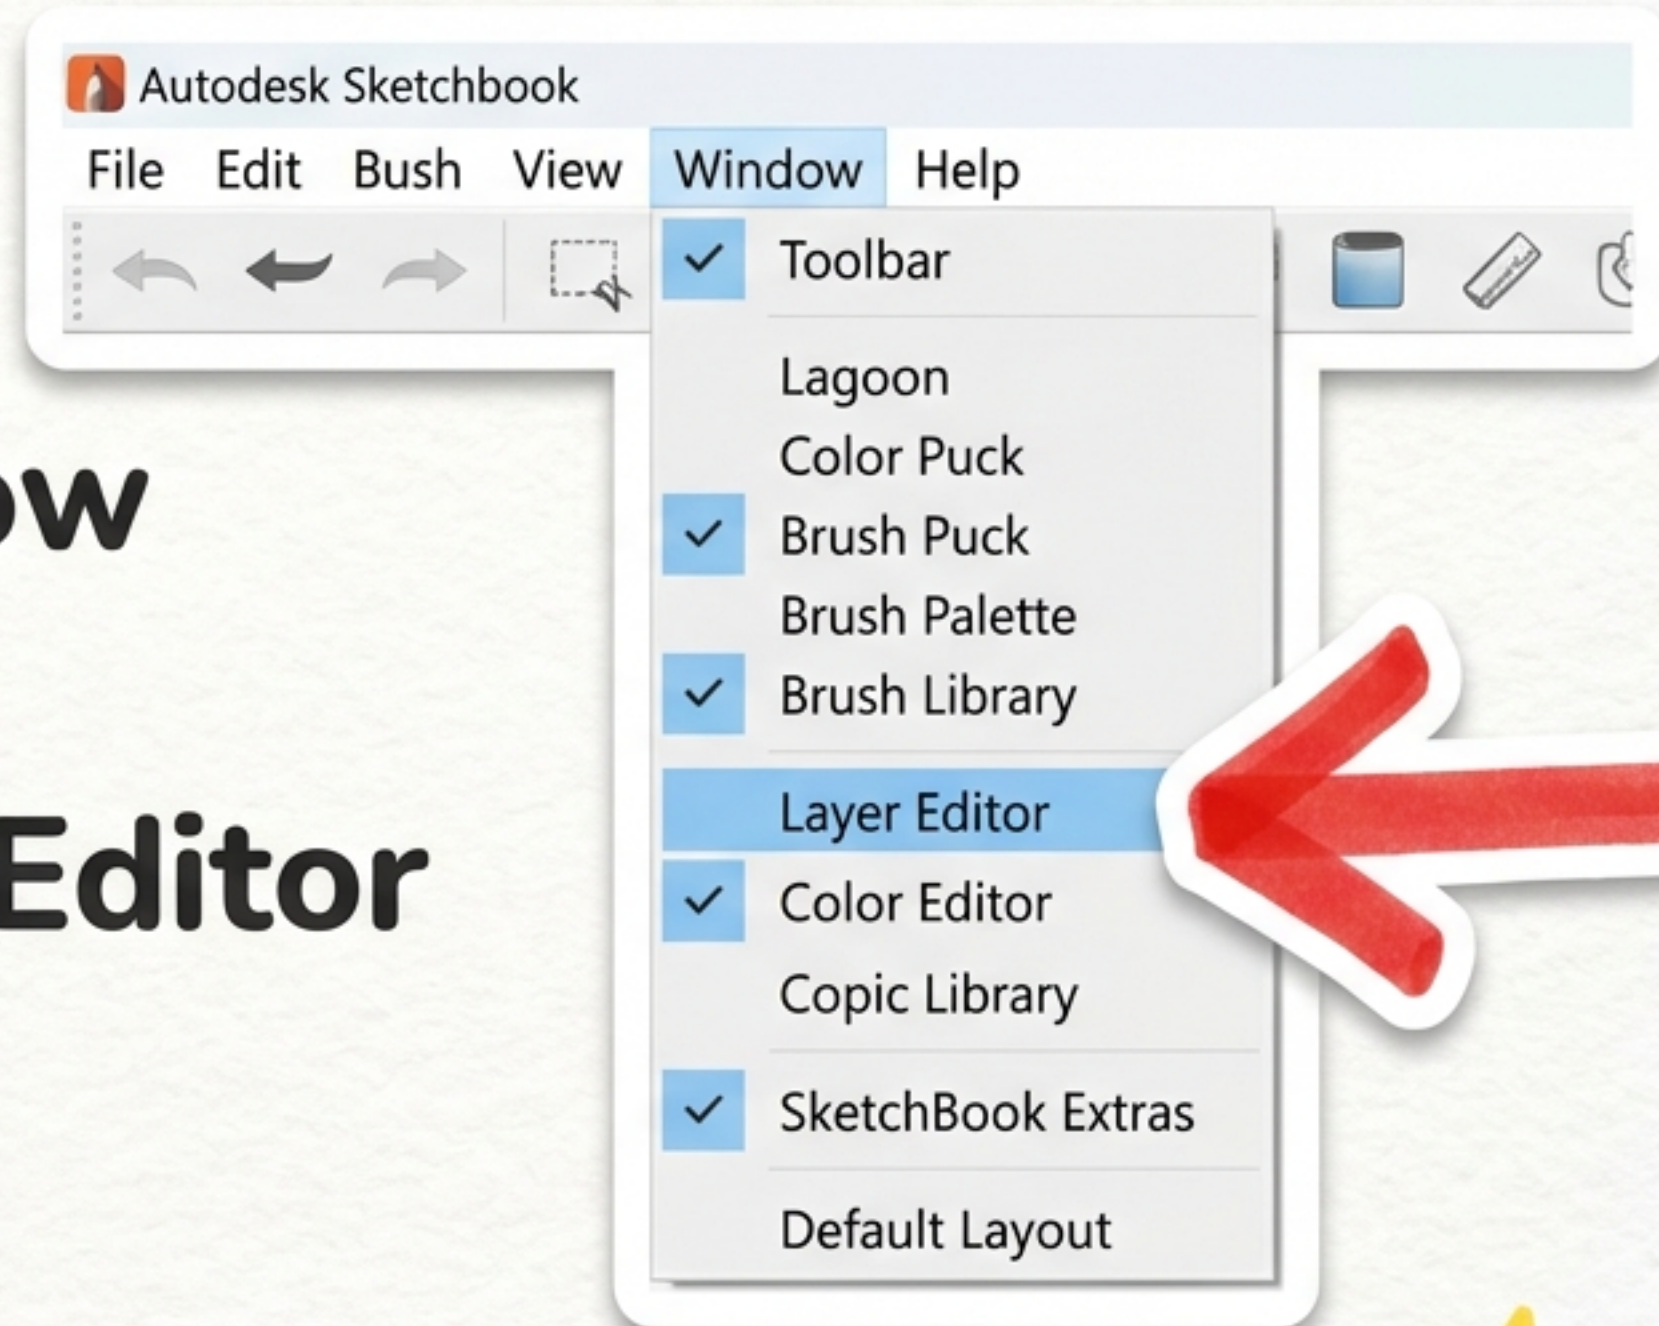

What is a Layer?

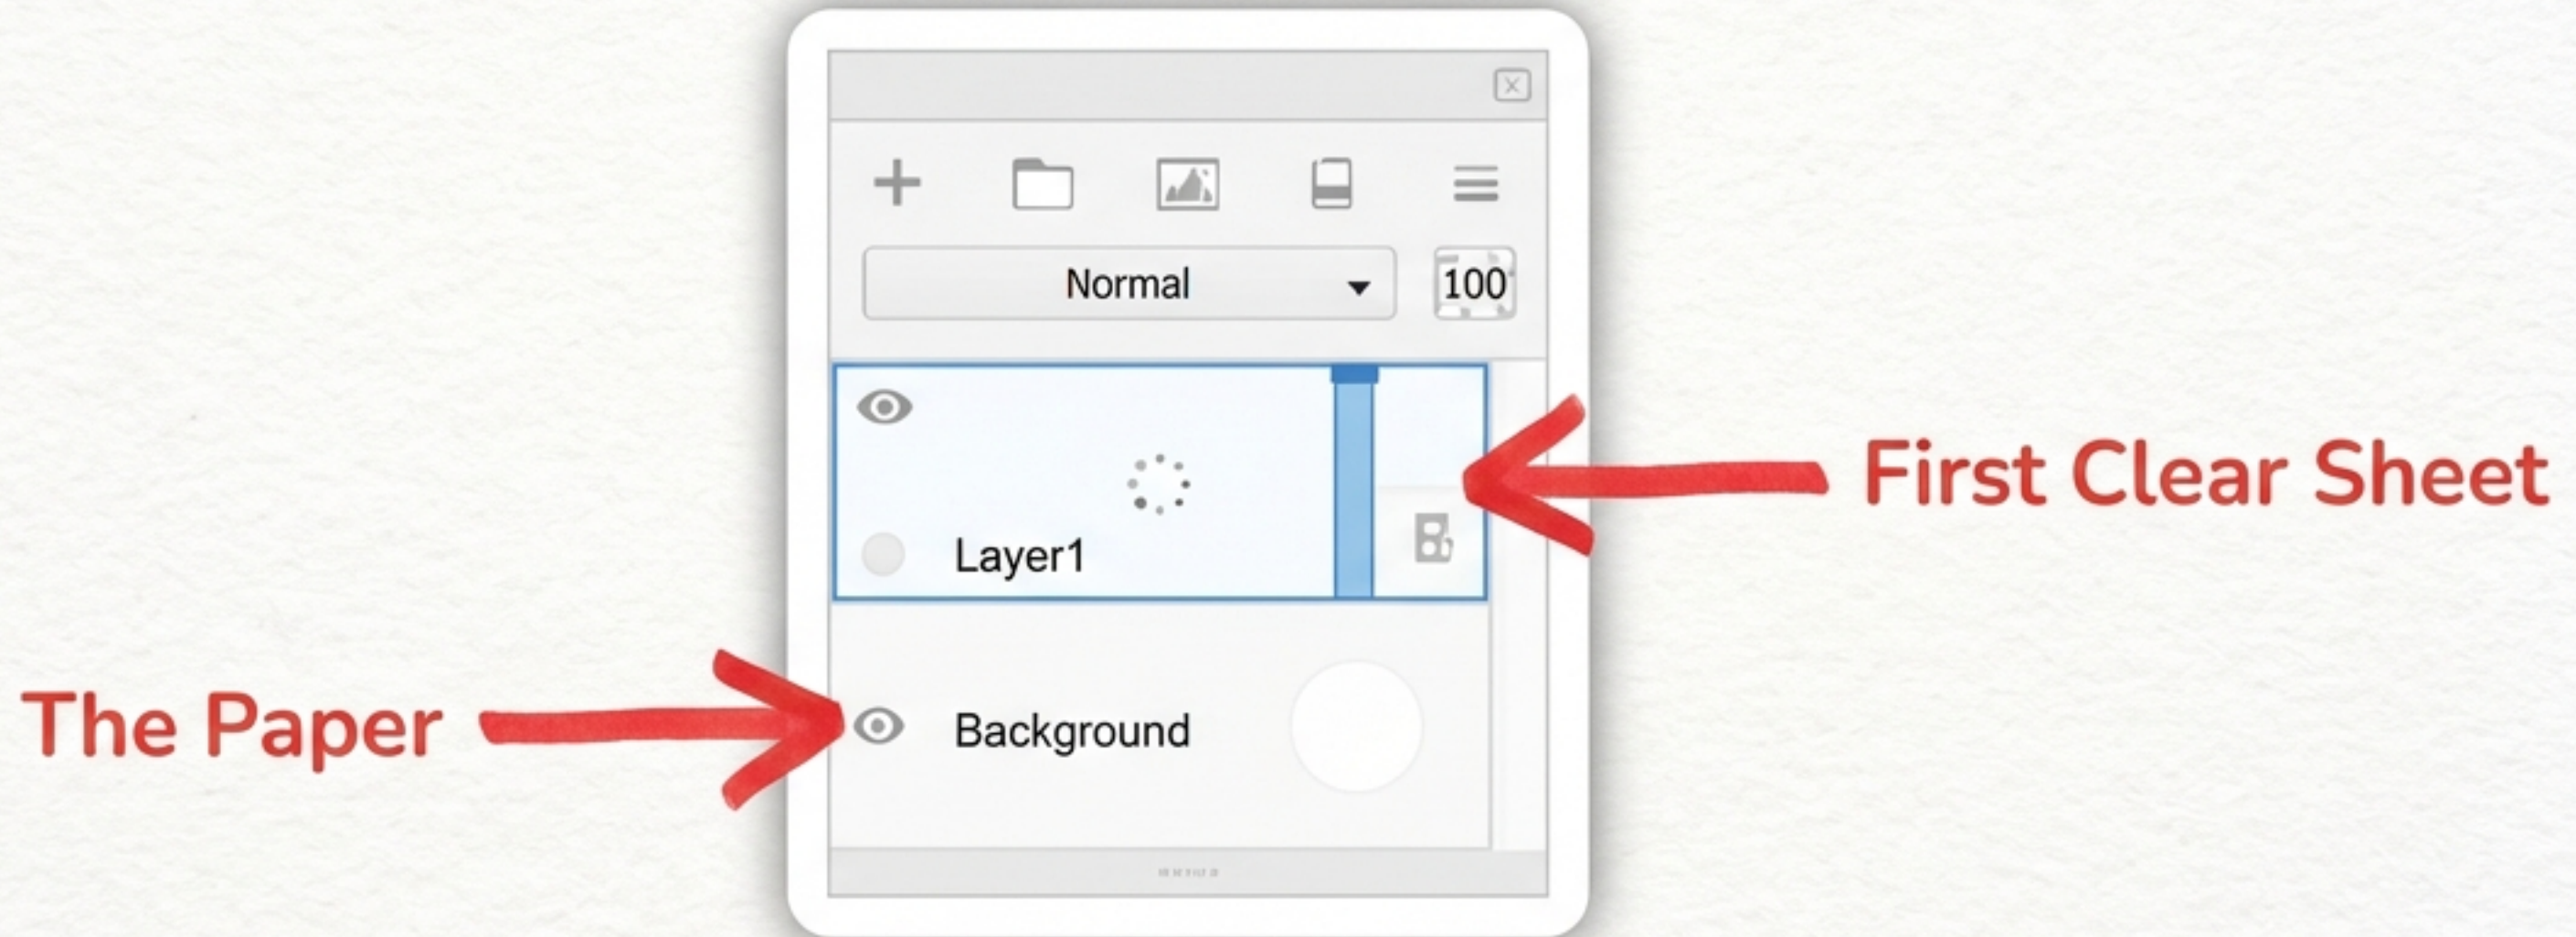

Imagine drawing on clear sheets of plastic. You can stack them like a sandwich! You can draw on the top sheet without touching the bottom sheet.

Finding Your Tool Box

1. Click on **Window**
2. Click on **Layer Editor**

The Control Center

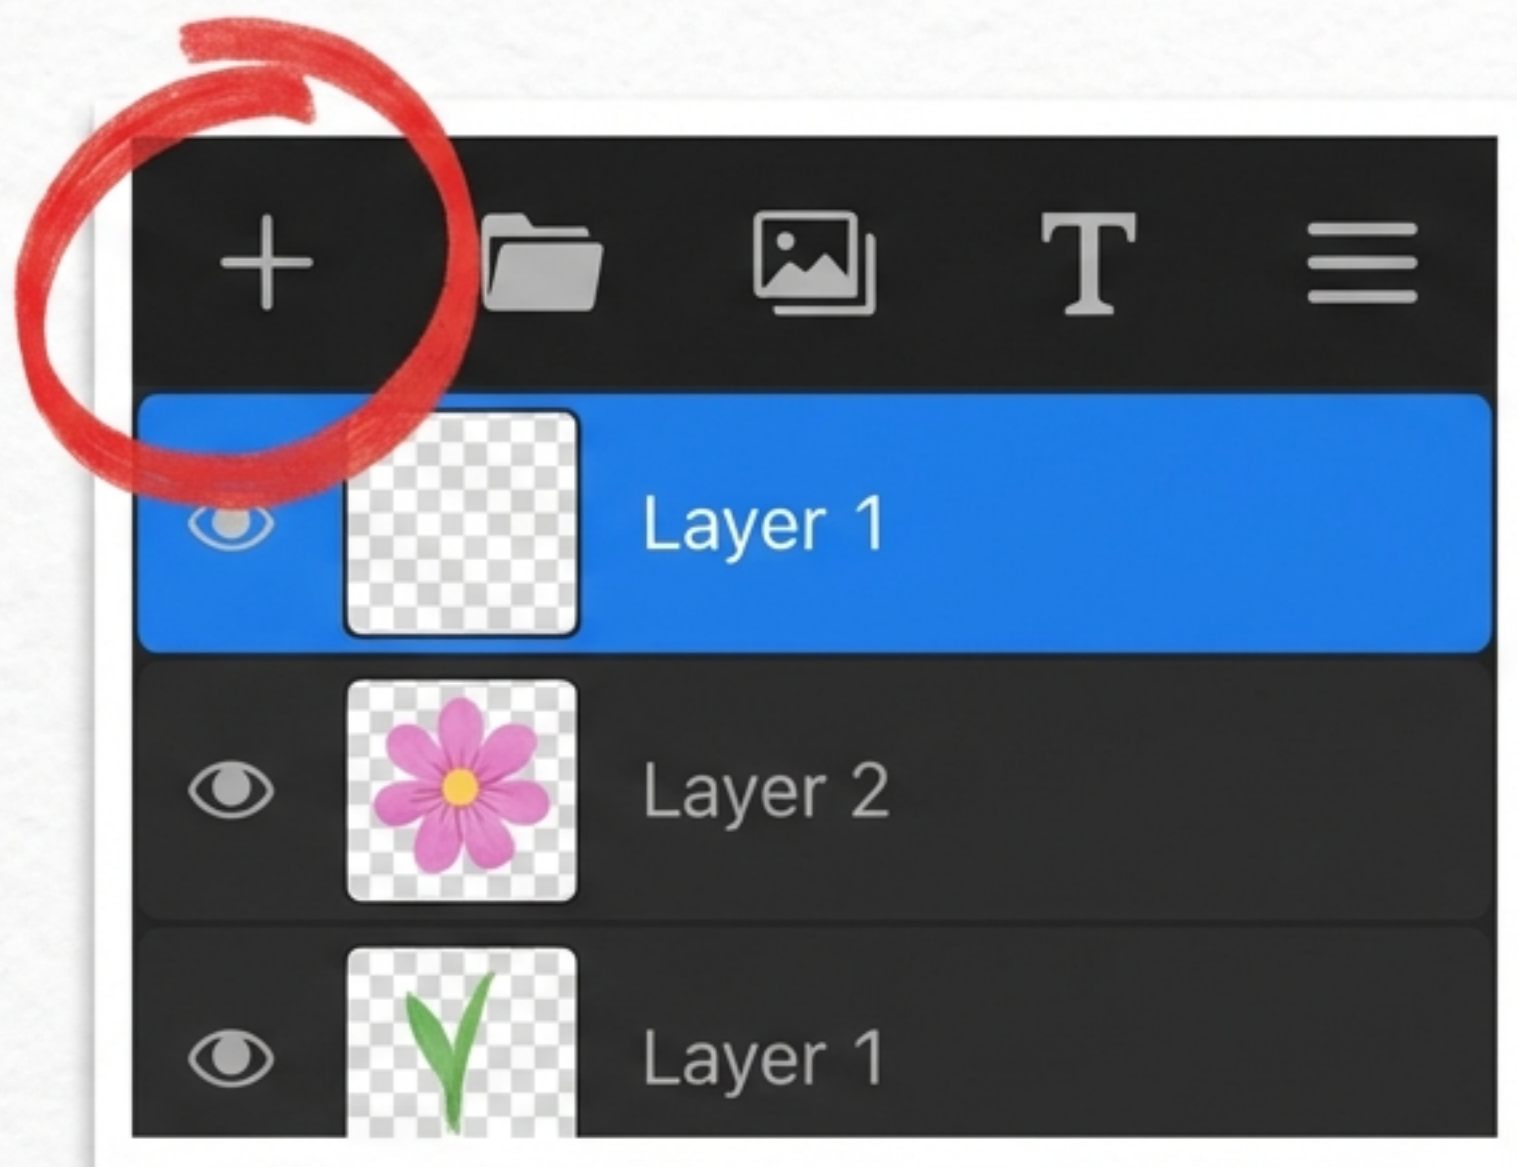

This box helps us control our clear sheets.
We call them Layers.

Step 1: Draw the Flower

Draw a beautiful flower on the first layer. This is our bottom sheet.

Step 2: Add a New Layer

Click the Plus (+) button. Now you have a clear sheet on top of your flower!

Step 3: Draw the Butterfly

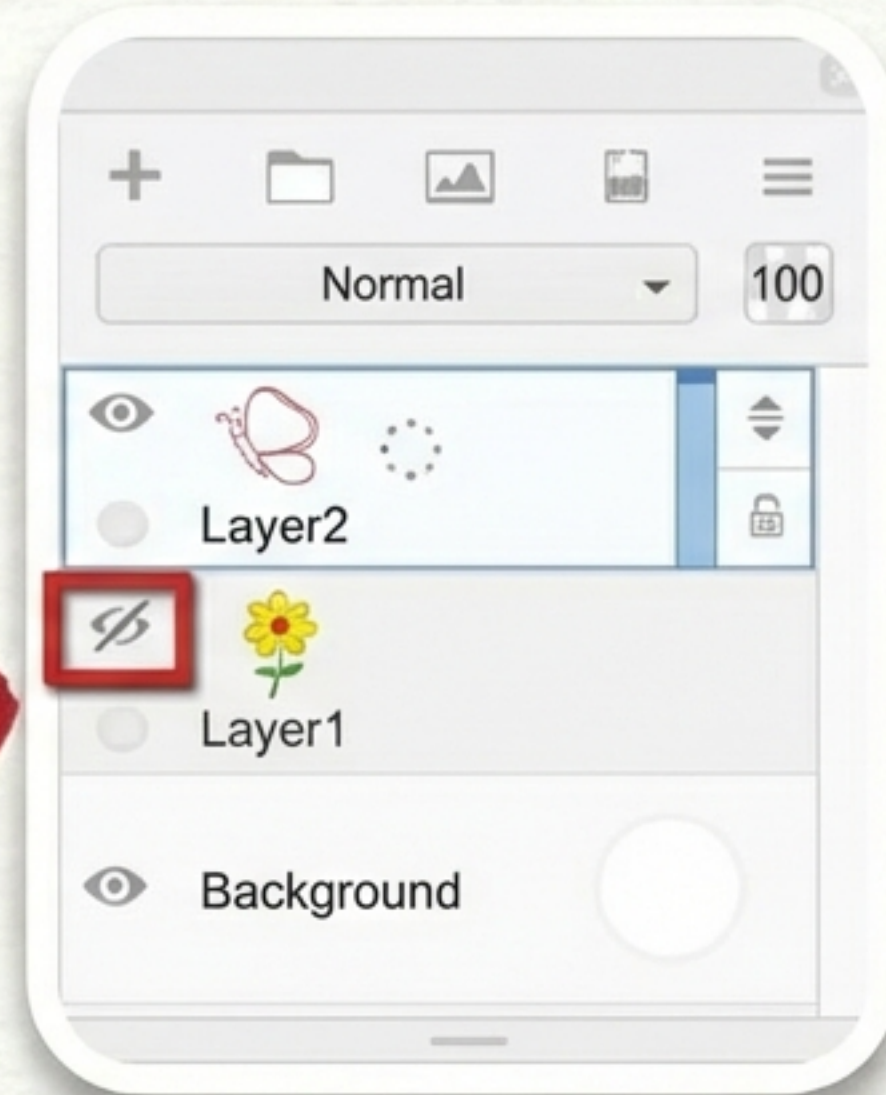

Layer 2

Layer 1

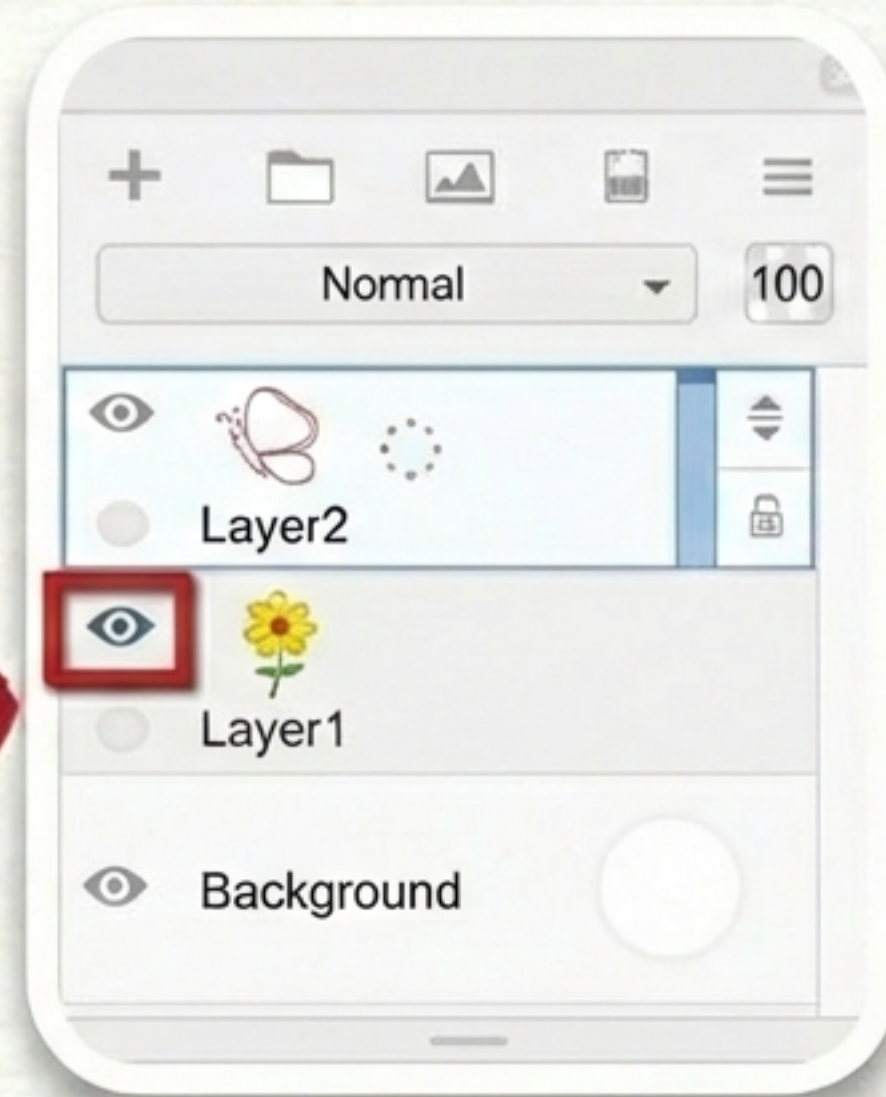

Draw a butterfly on the new layer. It looks like it is sitting on the flower, but it is actually floating above it!

The Magic Eye

Click the Eye icon on the flower layer. Poof! The flower
is hidden, but the butterfly stays.

Peek-a-Boo!

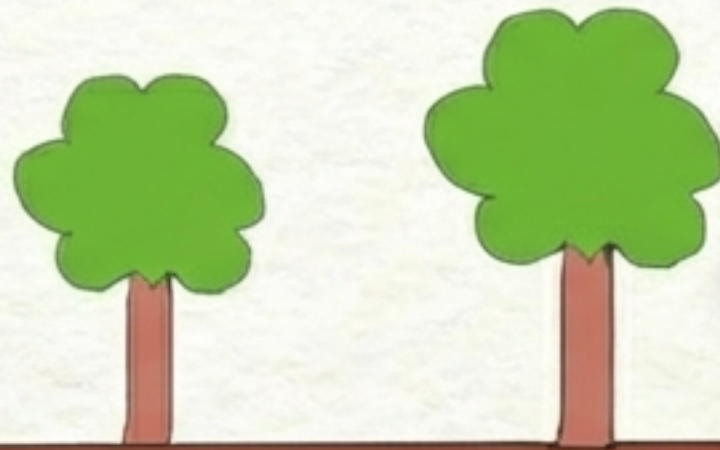

Click the Eye again to bring the flower back.
You are in total control.

A New Challenge: The Storm

I want to make a big storm with lots of clouds. Do I have to draw every single cloud? That takes too long!

The Copy Cat Trick

Don't draw it again!

1. Click the menu lines.
 2. Click **Duplicate**.
- This means “**Copy**”.

New Layer

Add Image

Clear

Duplicate

Instant Storm!

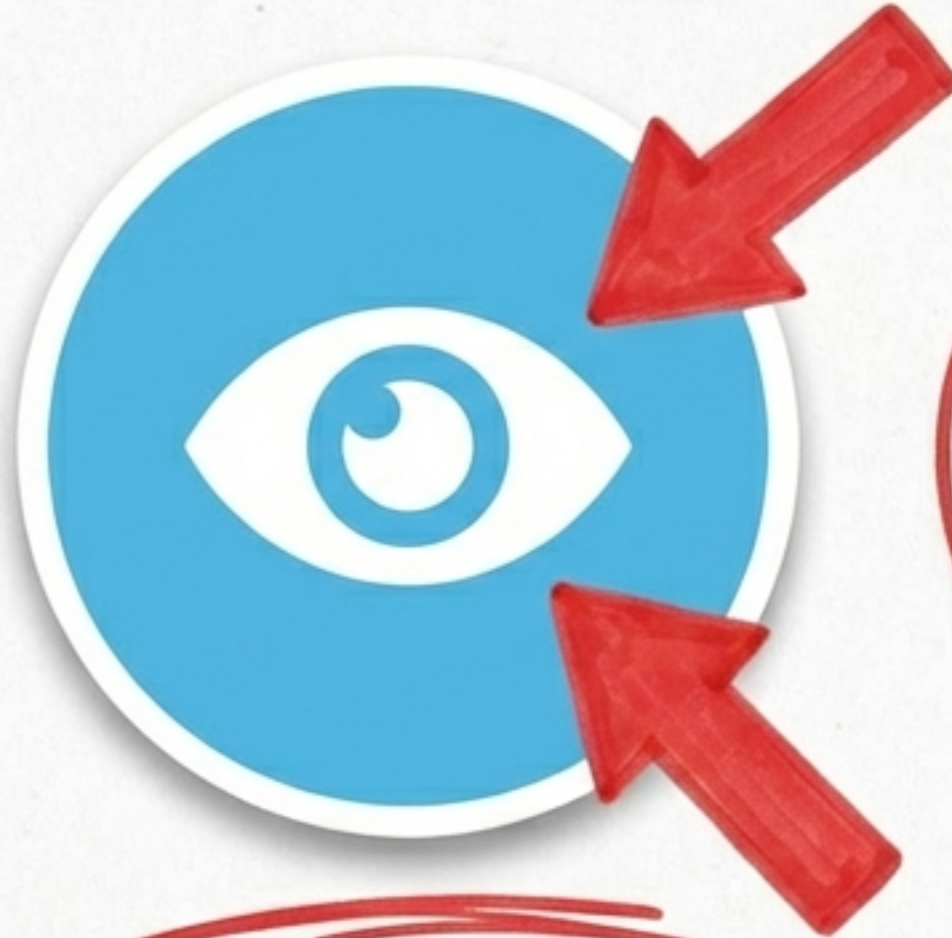

Now we have many cloud layers without drawing them all. It's **magic!**
