

Data

Data is a collection of information. This can be numbers, words, or descriptions of something. Data can be of two types:

1. Description of an object.
Example: The giraffe is the **tallest land animal**.
2. Information in a number form.
Example: There are **10 apples** in the basket.

Data Visualisation

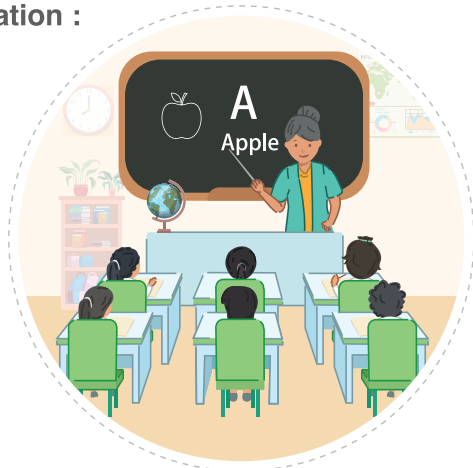

This a process in which we visualise the data. It is usually in the form of a picture.

13. Pictograph

Data :

A teacher is in a class with 6 students. She is teaching the alphabet.

Visualisation :

Through this picture, we understand:

1. There is 1 teacher in the class.
2. Teacher is teaching the alphabet.
3. There are total of 6 students in the class.
4. Students are learning about the alphabet.

Exercise

Fill in the blanks

- 1 A collection of information, such as numbers, words, or descriptions of things is called _____.
- 2 _____ is a process in which we visualise the data in the form of a picture.

Pictograph

- A pictograph is a way to show data with pictures.
- It is easy to read as we can understand it when we look at it.

Example 1:

Washroom doors have signs on them. These indicate if the washroom is for women, men, or People of Determination. This is one type of Pictograph.

Example 2:

Data:

Here is a pictograph of the number of apple boxes sold at a shop over 3 months. In which month has the shop sold the maximum number of boxes?

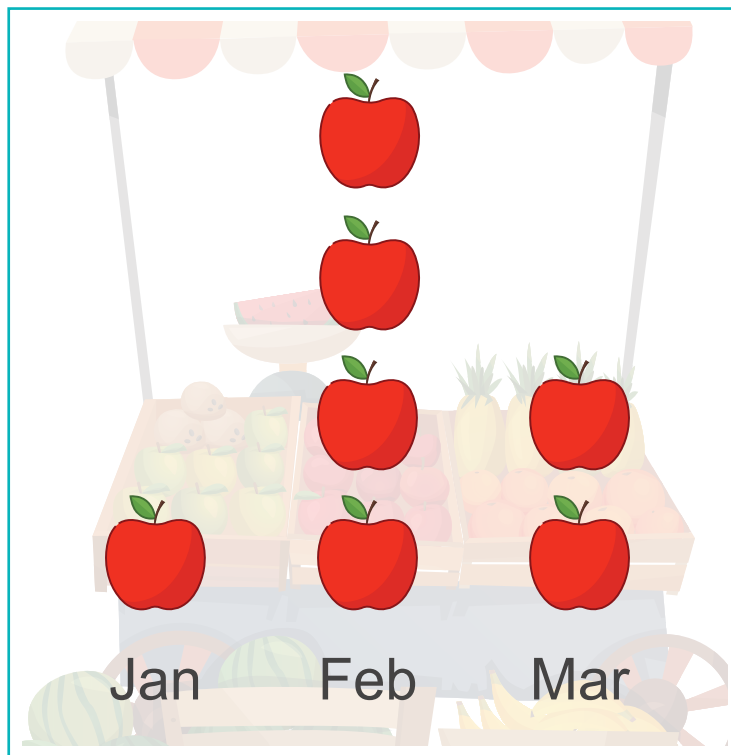

Note:

Each  = 1 box of apple.

As per the pictograph:

- In **January**, **1 apple box** was sold.
- In **February**, **4 apple boxes** were sold.
- In **March**, **2 apple boxes** were sold.

It can easily be seen from the above pictograph that the shop sold maximum number of apple boxes in February.

Activity

The students picked their favourite fruit. Their responses are given below. It is difficult to look at this and find the most popular fruit. So, we will arrange this data to build a pictograph. Given below are the responses of students of their favourite fruits:

Which fruit is most popular?

Students' responses:

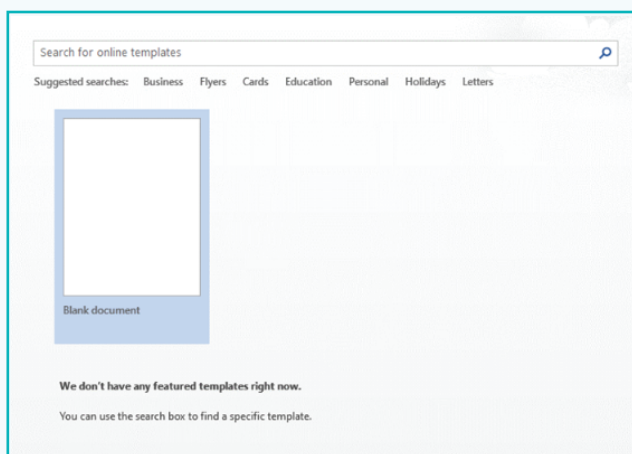

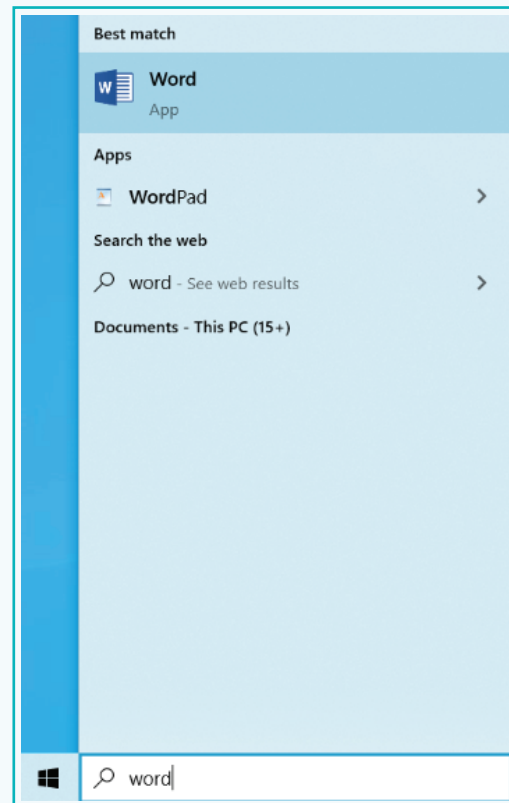

Apple, Apple, Orange, Banana, Apple, Banana, Orange, Apple, Apple, Banana, Banana, Orange, Banana, Apple, Orange, Orange, Orange, Apple, Apple, Banana, Banana, Apple, Banana, Orange, Orange, Banana, Banana, Banana, Banana, Apple.

To simplify the data, we will use MS Word. First, we will insert pictures of fruits as per the sequence. Then, we will arrange them in different lines as per their names.

Activity

An active internet connection is required for this activity because we are inserting online images in document.

- 1 Type **Word** in the search bar. Click on the **Word** application.

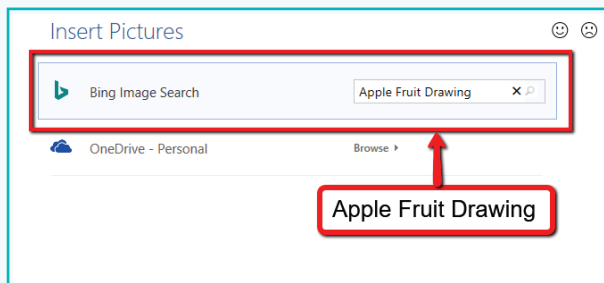

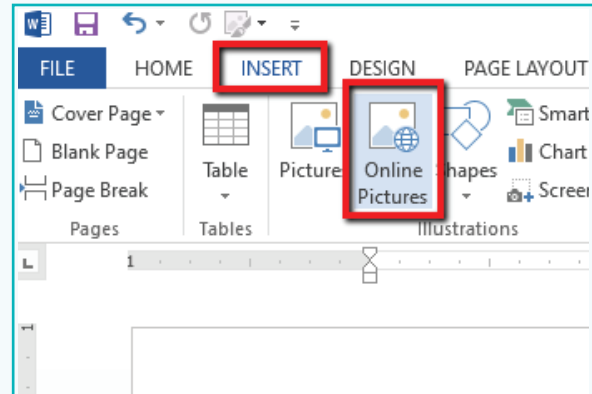

- 2 Type **Word** in the search bar. Click on the **Word** application.

Activity

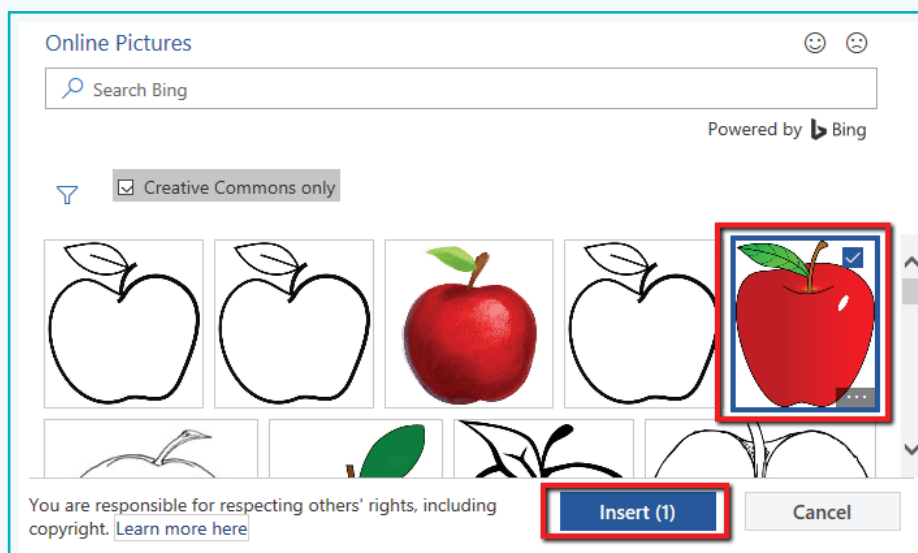

- 3 Create a visual sequence of fruit. Insert pictures of those fruits in the document.

- a. Go to **INSERT** and click **Online Picture**.
Search and insert pictures from the internet.

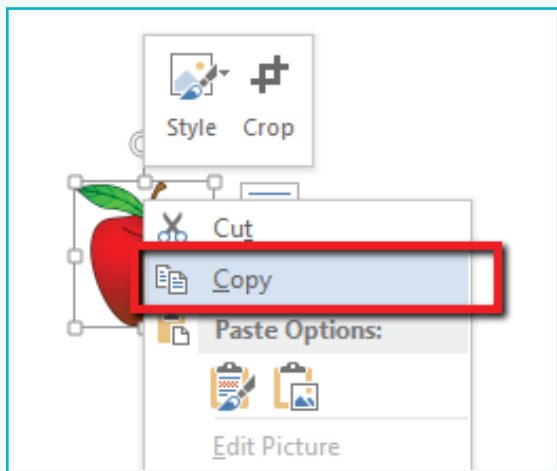

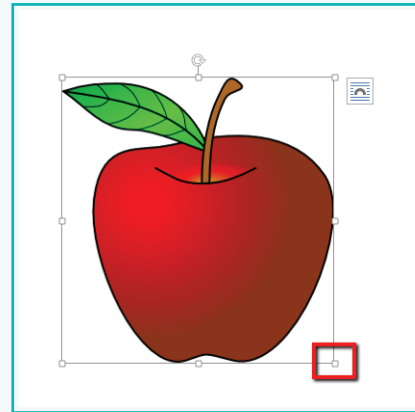

- b. In the search option, type **Apple Fruit Drawing** to search for an apple picture.

- c. Select the apple picture and click **Insert (1)**.

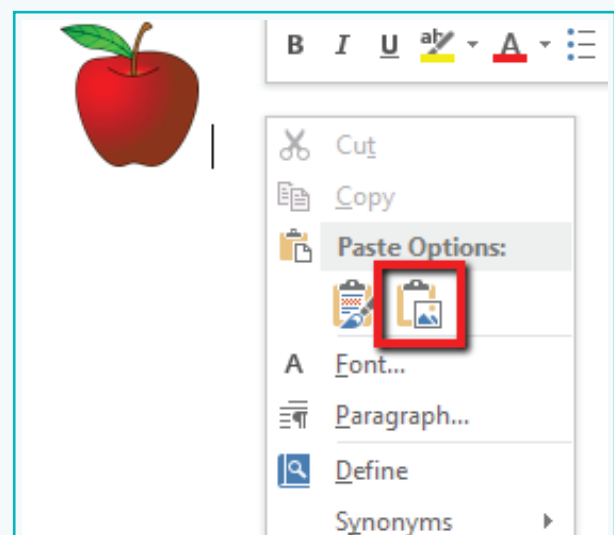

Activity

- d. Select the apple picture. Drag the **corner point** inside to reduce its size.

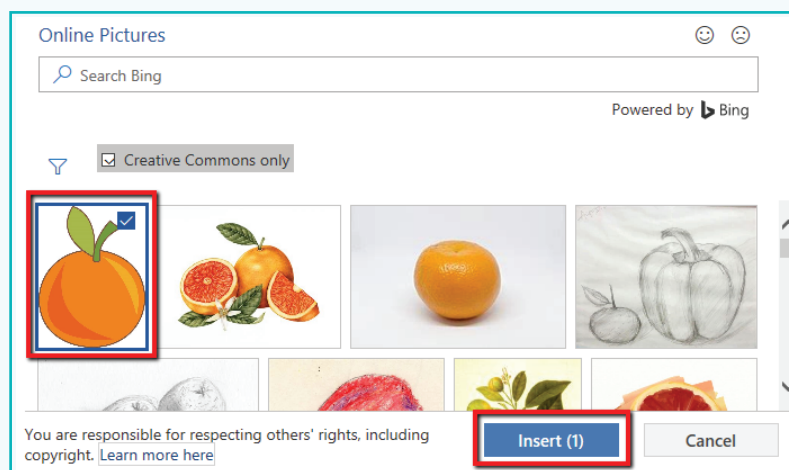

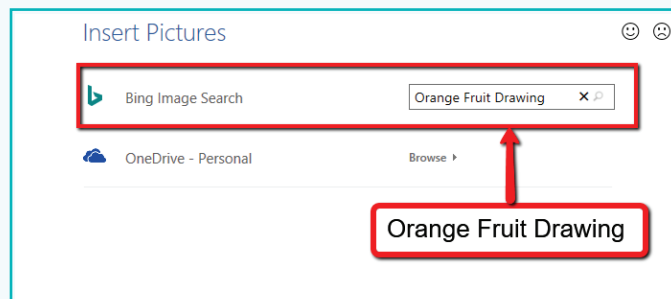

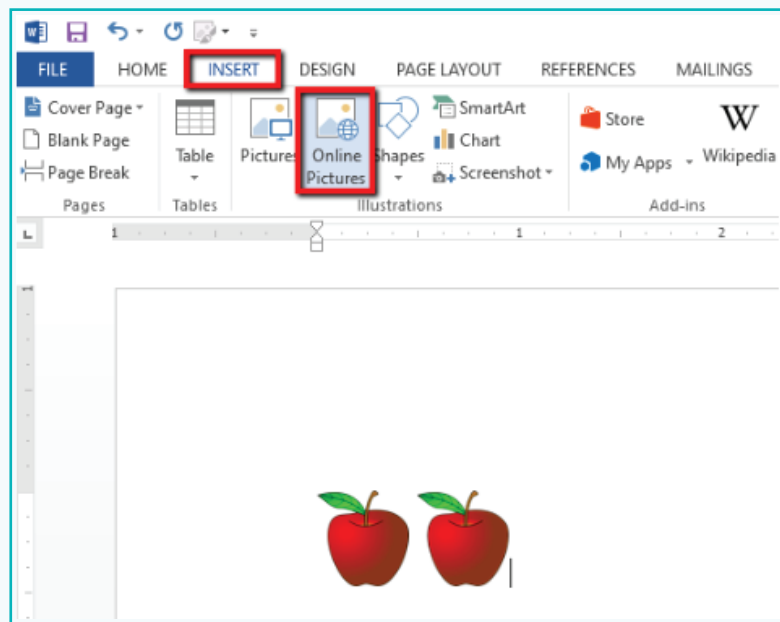

- e. We have two apples in the fruit sequence. Copy and paste the apple picture. Right click on it and select copy option to **copy** the picture.

- f. Select paste option to **paste** the picture.

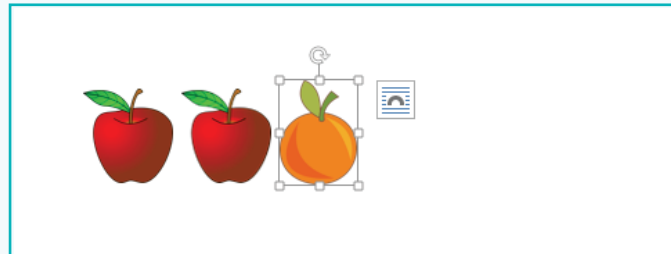

Activity

g. Use Online Picture to insert a picture of an orange fruit. Search for **Orange Fruit Drawing**.

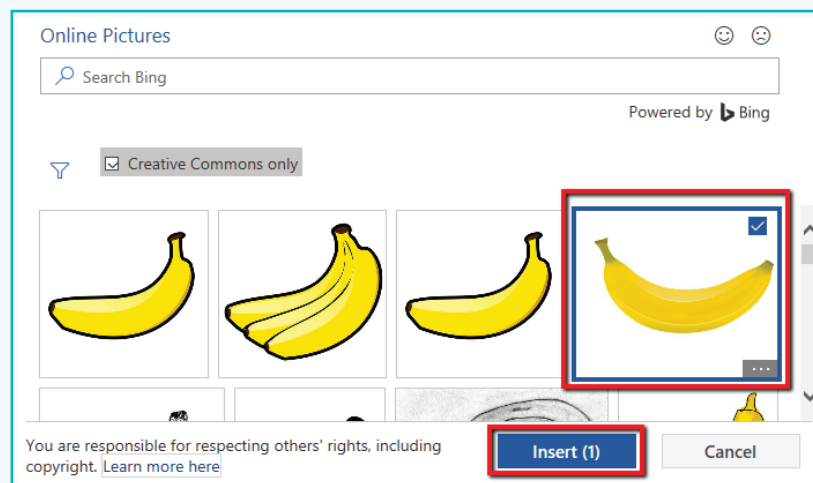

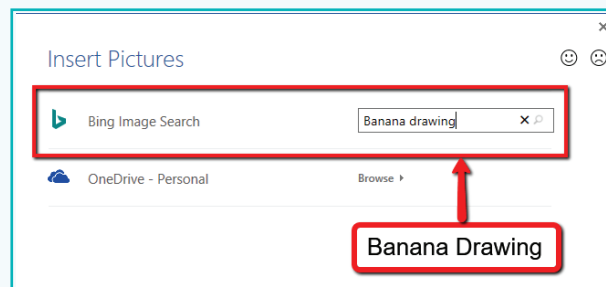

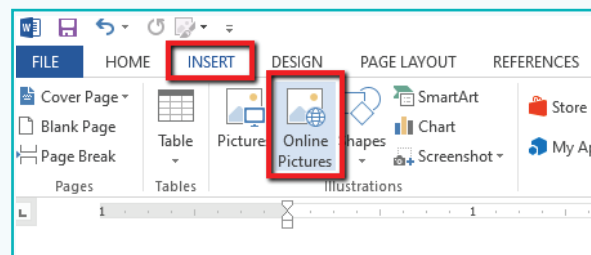

Activity

h. Resize the orange picture like the apple.

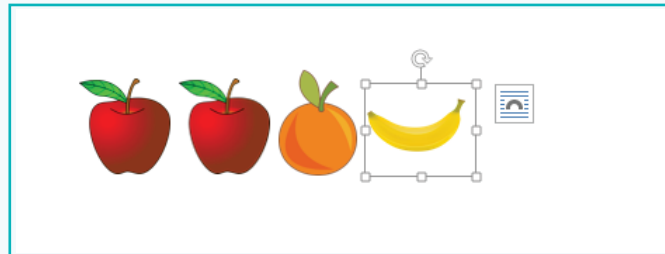

i. Insert a picture of a banana fruit from Online Picture. Search for **Banana Drawing**.

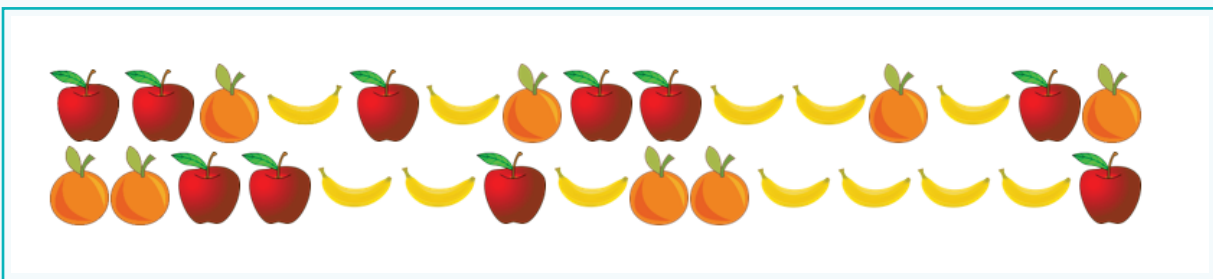

Activity

j. Resize the banana picture like the other fruits.

k. Copy and paste the all the fruits as per the fruit sequence.

4 Arrange different types of fruit in different lines. This will help us find which fruit has the maximum count.

Data Sorting is a process to arrange the data in a meaningful order.

a. Type the names of fruit in different lines.

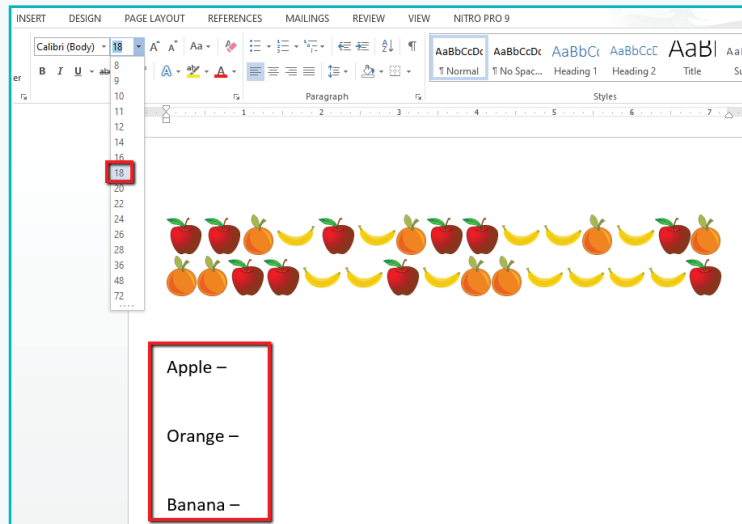

Apple –

Orange –

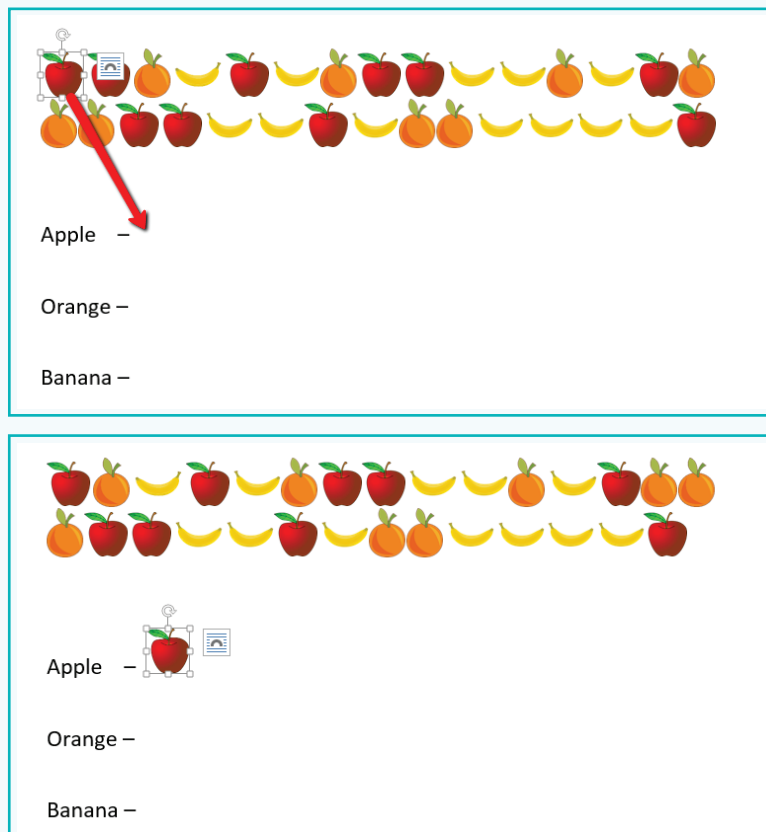

Banana –

Activity

b. Increase the font size of the names to 18.

c. Drag the picture of an apple fruit in front of its name as shown below

Activity

d. Drag all the pictures of Apple in front of its name

Apple – 

Orange –

Banana –

e. Similarly, drag all the pictures of oranges and bananas in front of their names

Apple – 

Orange – 

Banana – 

f. Count each fruit. Write the number of fruits in front of the line. And find out which fruit has the maximum count.

Apple –  = 10

Orange –  = 8

Banana –  = 12

- With the above pictograph we can say that the banana is the most popular fruit among the student

Exercise

State whether True or False

3 A pictograph is **NOT** a way of showing data using pictures.

4 We can search and insert pictures in MS word file from the internet. To do this, we click on the **INSERT** option and then click **Online Picture**.

Miss, it is so much easier to understand data with pictures.

Yes, it definitely is!

Tech Flash

1. **Data** : A collection of information, such as numbers, words, or descriptions of things.
2. **Data Visualisation** : A process in which we visualise the data in the form of picture.
3. **Pictograph** : A way to present data with pictures.
