

A computer works as a combination of **Hardware and Software**. **Hardware** are the parts that we can see and touch, like a keyboard, mouse, monitor, etc.

Software is the program that runs on the computer and is used to operate the computer hardware.

Software Icons

All software have different identities. We can identify software by their **icons**.

Paint

Notepad

Sketchbook

Software are of two types:

- Application Software
- System Software

Application Software are used by the users to achieve specific tasks. We can paint, watch movies, draw, play games, etc. with application software.

Examples: Applications

Groove Music is used to play music

Edge Browser is used to browse the internet

Sketchbook is used to draw and paint

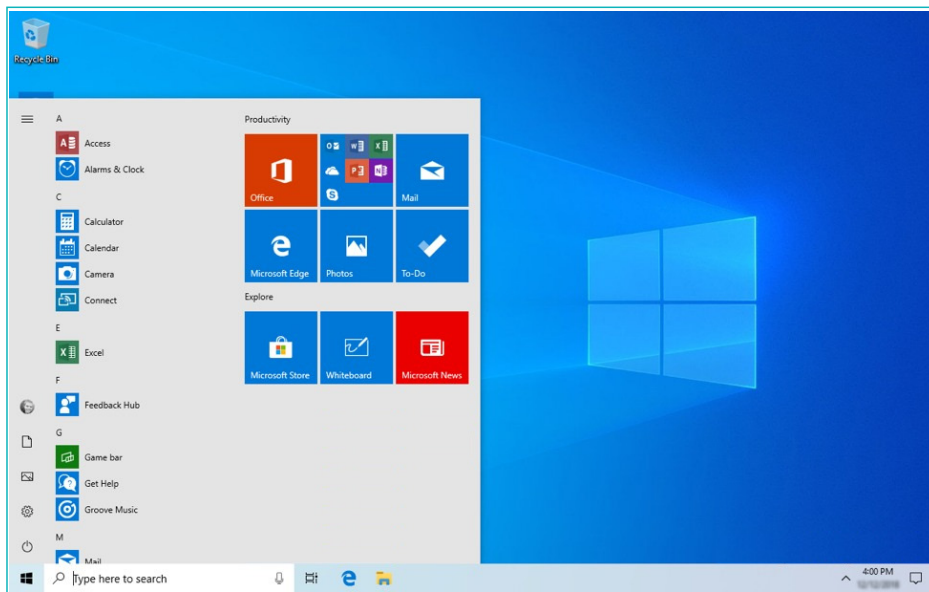

Bytes

Each software has a different icon unlike the default icons for files and folders.

System Software are used by the computers to run their hardware on different devices. All application software are run by the system software.

Examples: Operating Systems

An Operating System (OS) acts as an interface to connect a user with the computer's hardware. An operating system is a system software that performs all the fundamental tasks like file management, memory usage, etc.

Microsoft Windows 10 Operating System

Apple Mac OS Catalina

Software Versions

All software have different versions. The reasons for this are:

- Software need to be improved over time. New features are added in the new versions.
- New versions keep track of these improvements.
- A new software version indicates that some changes or updates have been made in the previous version.
- In most cases, all known problems in a version are solved in the next version.

The software version can have a unique number, word, or both assigned to it.

For example: Software name: Microsoft Windows 10 (Version 1909) is better than Microsoft Windows 10 (Version 1903)

Exercise

 **Tick Mark ☒ the correct answer**

1 Which of the following has an icon?

- a. Hardware ☐ b. Software ☐ c. Both ☐

Software on Smartphones:

- Smartphones also work with the combination of hardware and software, just like desktop and laptop computers.
- Application software in a smartphone are called Apps.

For example:

Calendar

Music Player

Gallery/Photos

- Smartphones also use an operating system (OS) as a system software.

For example:

Android

iOS

Exercise

2 Which software will you use?

 Answer the following questions in one line.

3 What is a software?

 _____

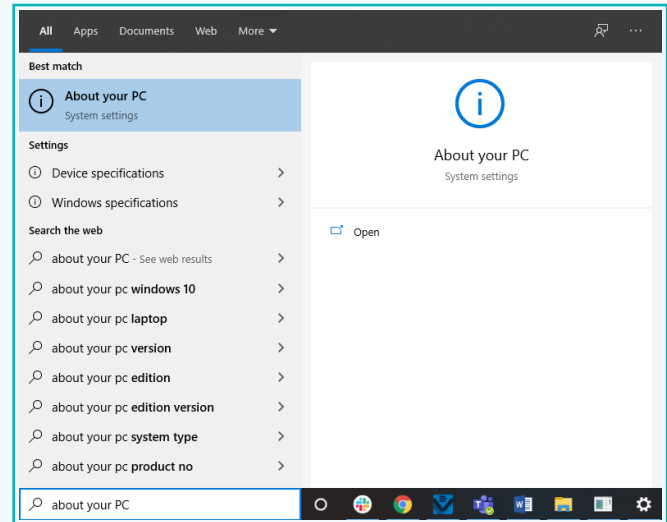

4 What is an application software?

 _____

Activity

Find the version of Windows 10 operating system.

- 1 In the search bar, type **About your PC**.

About

Device specifications

Inspiron 3542

Device name	IOT-Developmet
Processor	Intel(R) Core(TM) i3-4005U CPU @ 1.70GHz 1.70 GHz
Installed RAM	8.00 GB
Device ID	FB04BA3F-BE08-4FDC-8E69-44C3E8506931
Product ID	00327-30339-11251-AAOEM
System type	64-bit operating system, x64-based processor
Pen and touch	No pen or touch input is available for this display

Rename this PC

Windows specifications

Edition	Windows 10 Home Single Language
Version	1903
Installed on	8/30/2019
OS build	18362.720

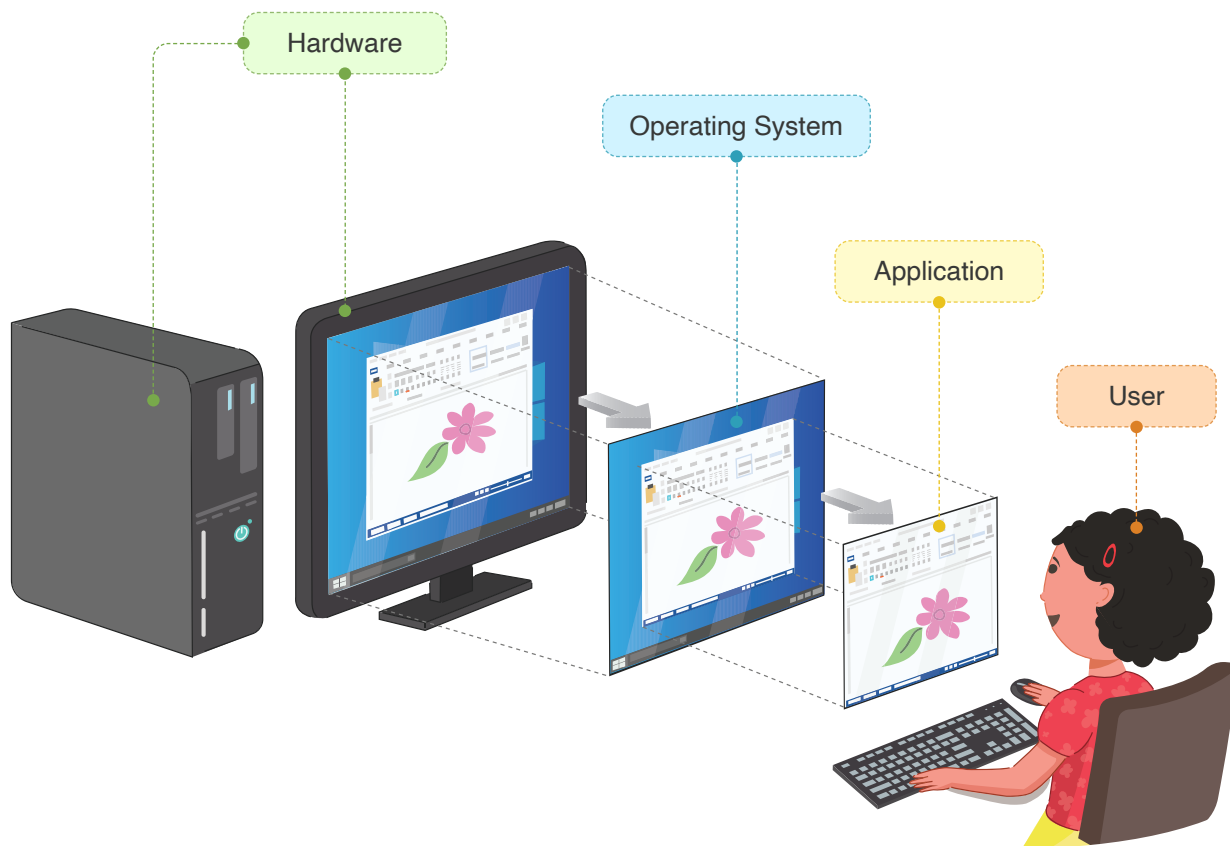

- 2 A window will appear with the details of your PC. This also includes the windows OS version.

Bytes

All the computer games that we play are Application Software.

How does a user operate a computer?

- The user gives a command to the application software.
- The application software runs on the operating system (system software).
- The operating system controls the hardware to perform some specific tasks.
- Users can also directly interact with the operating system.

Tech Flash
