Pictograms:

Visual Data Storytelling

Welcome to our journey into the world of pictograms! **Today**, we'll discover how pictures can tell powerful data stories that are easy to understand at a glance.

What We'll Learn Today

1 What is a pictogram?

Understanding the definition and purpose of pictograms

2 Key components

Learning the essential parts that make up an effective pictogram

3 Real-world examples

Discovering pictograms in our everyday lives

4 Creating our own

Designing and interpreting pictograms with our class data

What Is a Pictogram?

A pictogram is a **chart that uses pictures or symbols** to represent data instead of just numbers.

Pictograms make information:

- Easy to understand at a glance
- Visually engaging and interesting
- Accessible to everyone, even if they're not strong readers
- More memorable than tables of numbers

Do you know the
meaning of this sign?

Think carefully

Exercise

Page Number 04

Essential Components of a Pictogram

Title

Tells us what the pictogram is about (e.g., "Our Favorite Sports")

Symbols

Simple icons that represent the data (e.g., ⚽ for soccer)

Key

Explains what each picture is worth (e.g., ⚽ = 2 students)

Labels

Names for each category (Soccer, Swimming, etc.)

Pictograms in Our Daily Life

We see pictograms everywhere, even if we don't realize it!

- Road signs (No Parking, No Entry)
- Restroom symbols for men and women
- Weather symbols on forecasts
- Safety instructions on airplanes
- App icons on your tablet

These all use simple pictures to communicate important information **quickly and clearly**.

Reading a Pictogram

Step 1: Read the title

Understand what information the pictogram is showing

Step 2: Check the key

See how many items each symbol represents (e.g., 🍎 = 5 students)

Step 3: Count the symbols

Calculate the total for each category by multiplying

Step 4: Compare the data

Look for patterns, highest/lowest values, and differences

Let's practice with an example on the next slide!

Sps and iiras favorite book genres

Clear in car tea 5 pleased ladedet + + 5 stuanturs lby (Guribelly = 4 stuace nirl 5 studentes.
5, the coas by flections in coar buier cash ector enaledet with 5, fennat ared and movofacted born sated each
For cabrons book, Peedes by plion to wch is ster an books nlatory.

Practice: Class Favorite Book Genres

Look at this pictogram and answer:

1. What is the most popular book genre?
2. How many students prefer history books?
3. What is the total number of students surveyed?
4. How many more students prefer adventure books than history books?

Remember: Count the icons and multiply by the key value!

Let's Create Our Own Pictogram!

Here's our data about favorite colors in our class:

- Red: 8 students
- Blue: 12 students
- Green: 6 students

To create our pictogram:

1. Choose a symbol (e.g., ❤️ for all colors)
2. Decide what each symbol represents (e.g., ❤️ = 2 students)
3. Calculate how many symbols to draw for each color
4. Add a title, labels, and key

Pictograms vs. Tables

Pictograms

- Visual and engaging
- Easy to understand at a glance
- Good for comparing amounts
- Perfect for presenting to others
- Makes data more memorable

Tables

- More precise with exact numbers
- Can show more detailed information
- Good for recording raw data
- Easier to show very large numbers
- Takes longer to understand

Both have their uses! The best choice depends on your purpose and audience.

What We've Learned

- Pictograms use symbols to show data
They make information visual and easy to understand
- Every pictogram needs 4 key parts
Title, symbols, key, and labels
- We see pictograms everywhere
From road signs to weather forecasts
- Creating pictograms is fun and useful
A skill you'll use in many subjects and real life!

Quick Check:

If the key of a pictogram is 🍎 = 4 students, how many students does 🍎🍎🍎 represent?

❓ Think about it... then raise your hand to answer!

Next class: We'll learn about bar graphs and how they compare to pictograms!
