

Basic Troubleshooting

14

Troubleshooting:

- Troubleshooting is the process where we identify and fix problems.

Hardware problems and troubleshooting:

1. No display on the monitor

- Press the **power button** on the CPU and the monitor, if the light on the CPU and the monitor is On there should be a display on the monitor.
- If the light on the CPU or the monitor is still Off, it means that the main power supply is Off, call your teacher or parent to switch it On.
- If the light on the CPU or the monitor is On and there is still no display, call your teacher or parent for help.

2. Keyboard does not work

- If the letters are not getting typed on the screen, it means the keyboard USB cable is not plugged into the CPU cabinet.
- Call your teacher or parent to plug it properly.

3. Cursor does not move with the mouse

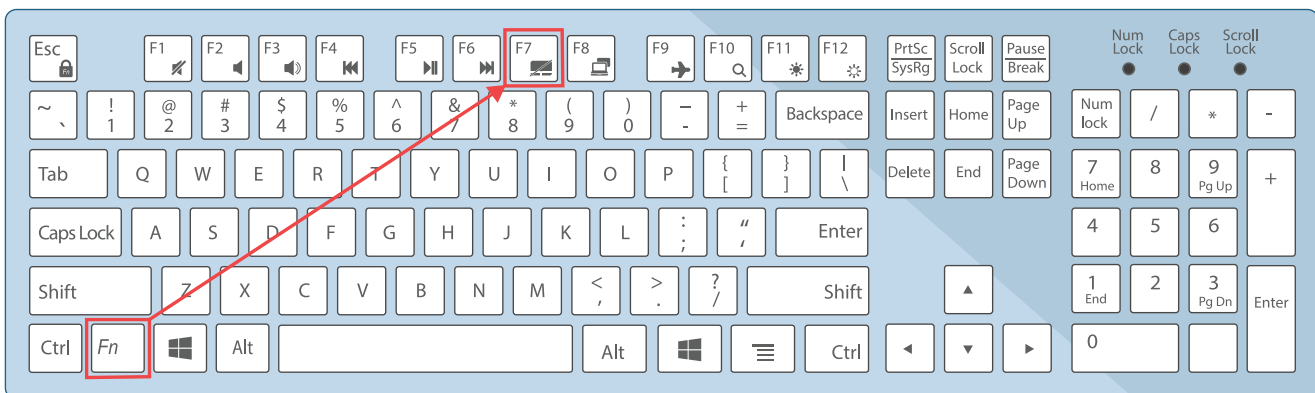

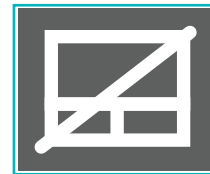

- If the cursor is not moving with the mouse, it means the mouse USB cable is not plugged into the CPU cabinet.

- Call your teacher or parent to plug it properly.

4. Touchpad on the laptop does not work

- Some laptops have a button to lock the touchpad.
- It is located with the function keys.
- To unlock the touchpad, **press the button that looks like this:**
- In some laptops, the **touchpad lock button** needs to be used together with **Fn** button. This is how we **lock** or **unlock** the touchpad.

Function keys:

Function keys are the "F" keys along the top of the computer keyboard.
