Do you all have plants at home?
Have you seen how they grow?

Yes Miss. We plant seeds and
then small stems and leaves
appear. Then it grows into a plant.

Correct! Look at this sapling that I've
brought today. This will be our class plant.
We'll water it and take a picture of it every
week. So, we can watch it grow into a plant.

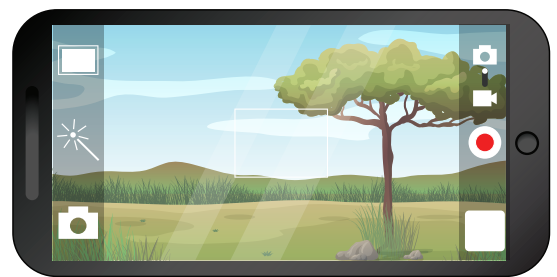

To capture an image is an art. This art is called photography. We can use many devices to capture images. For example, a **Webcam**, **Digital Camera**, and **Smartphone**.

Webcam

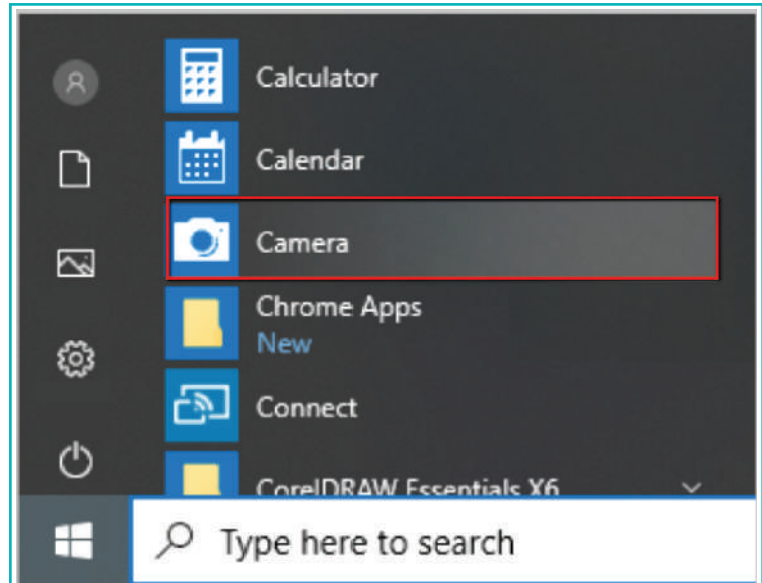

Digital Camera

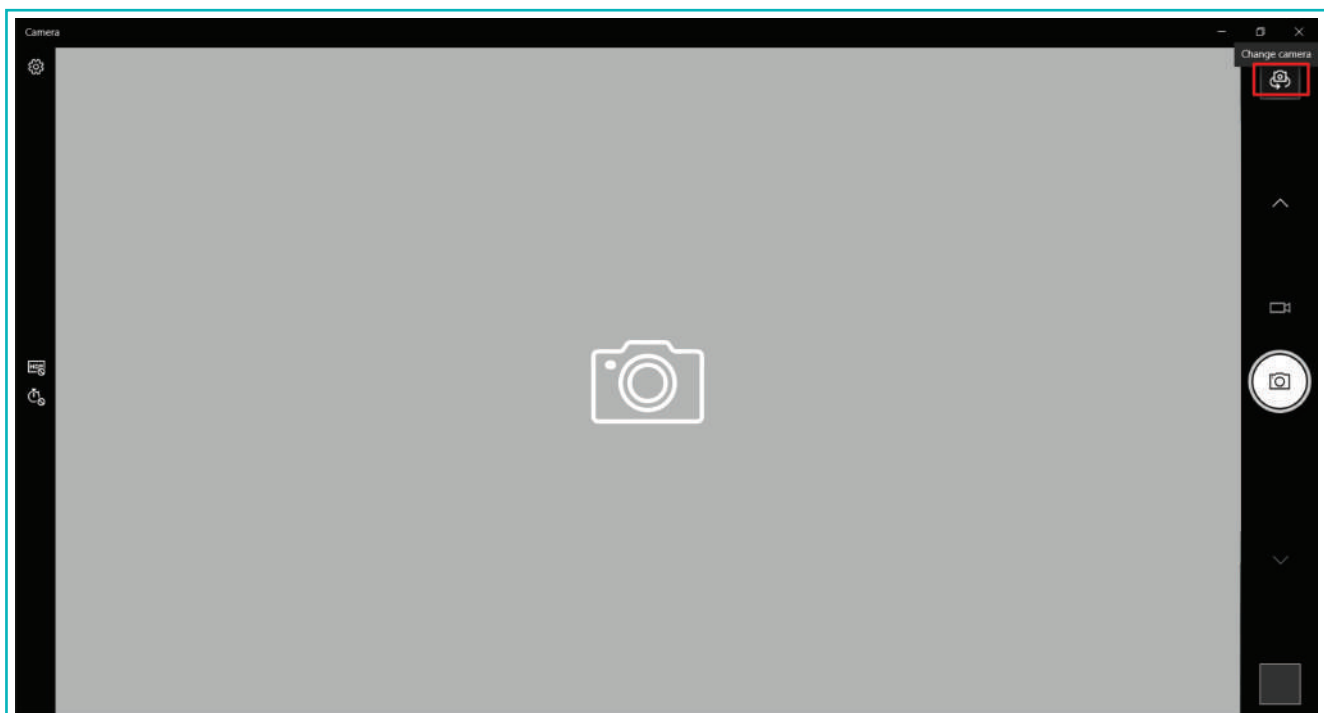

Smartphone

Let us look at how to use a webcam to capture an image.

- Click on the **windows icon**.
- Click on “**Camera**”

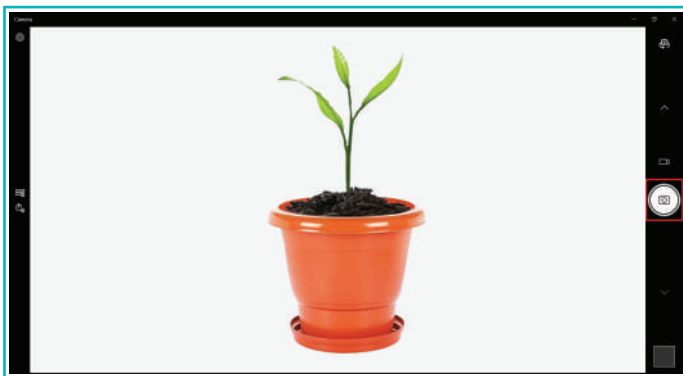

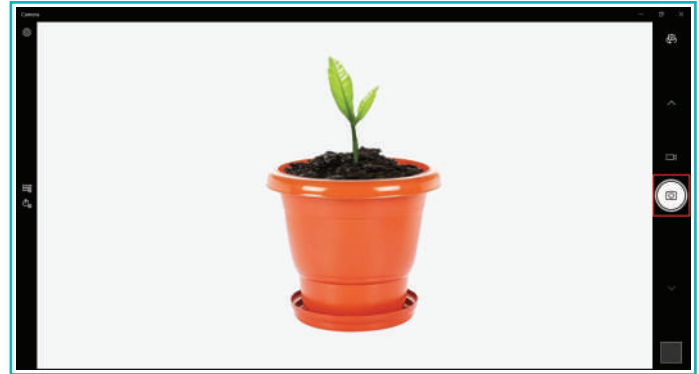

- When you click on **Camera**, you may see the following window.
- Click on “**Change Camera**” to choose any external camera.

9. Photo Gallery

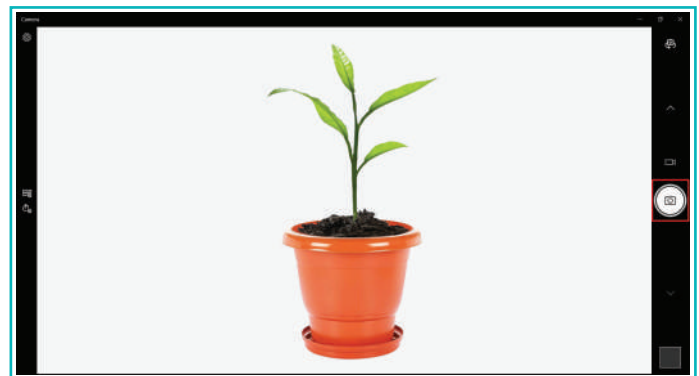

- Click on the **camera** icon to **capture the image**.

Day 1

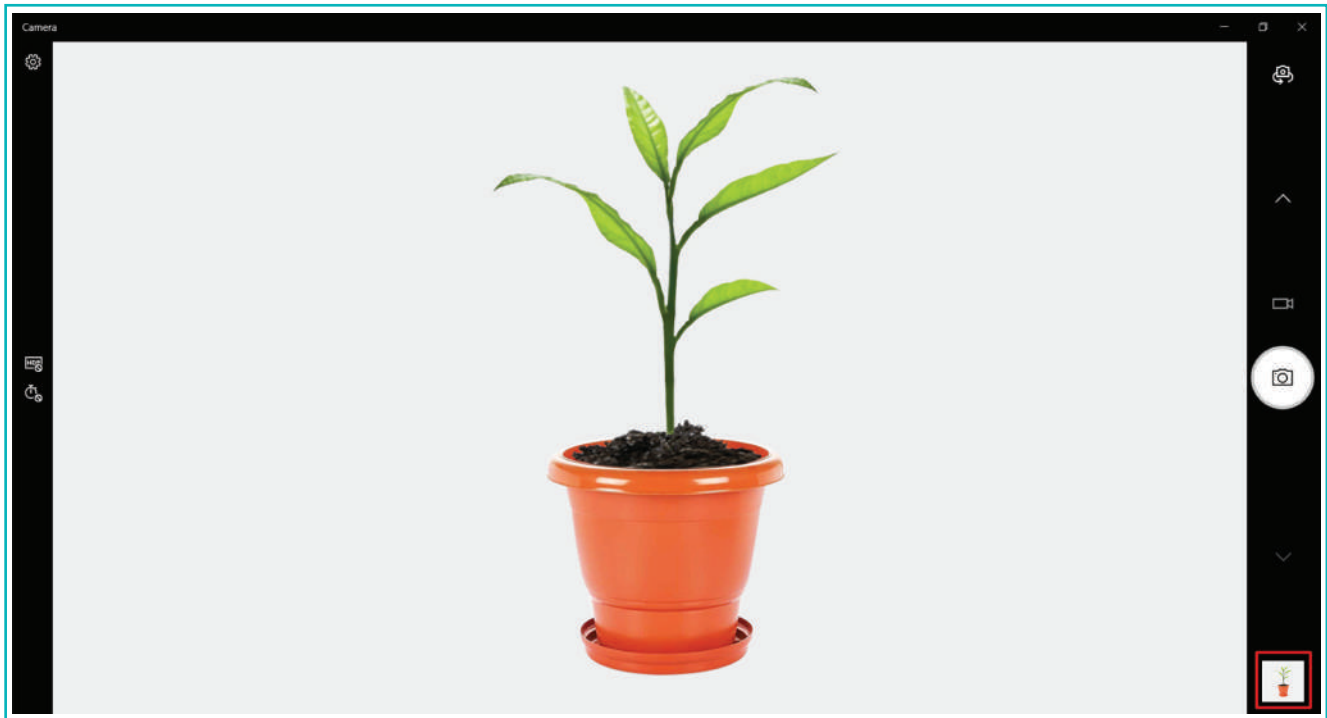

One week later

Two weeks later

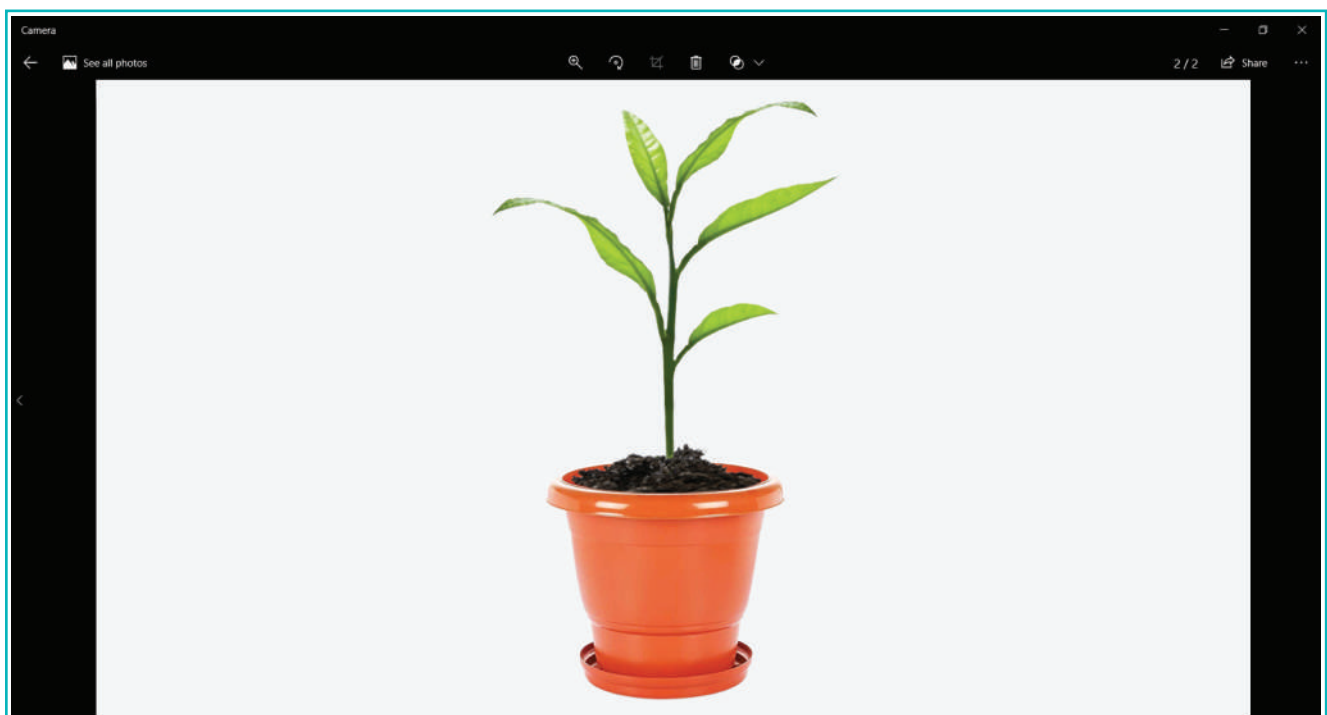

Three weeks later

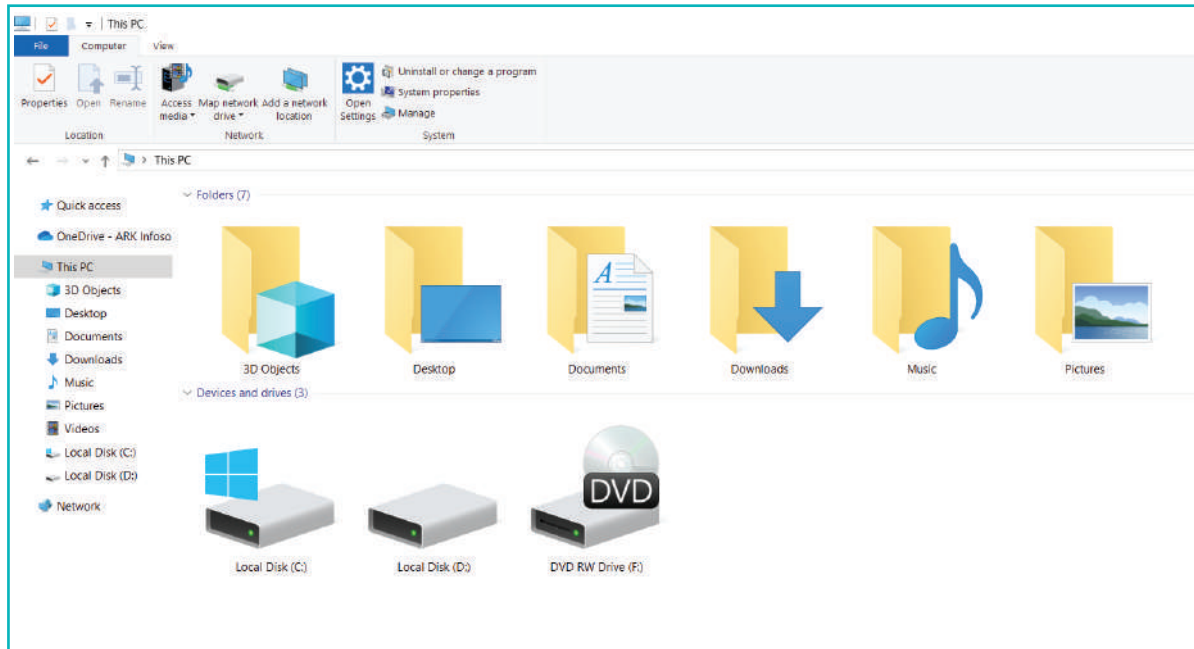

- A small version of the **captured image** can be seen in the **lower right corner**.

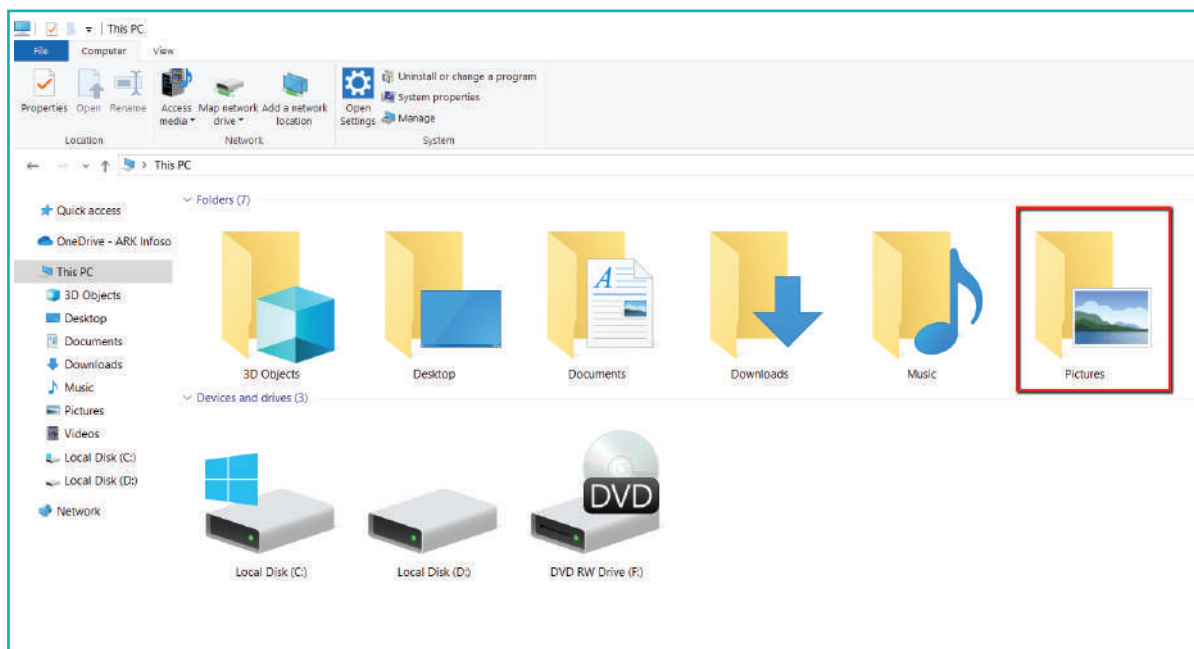

- When we click on it, the **image opens** in a **Photo software**.

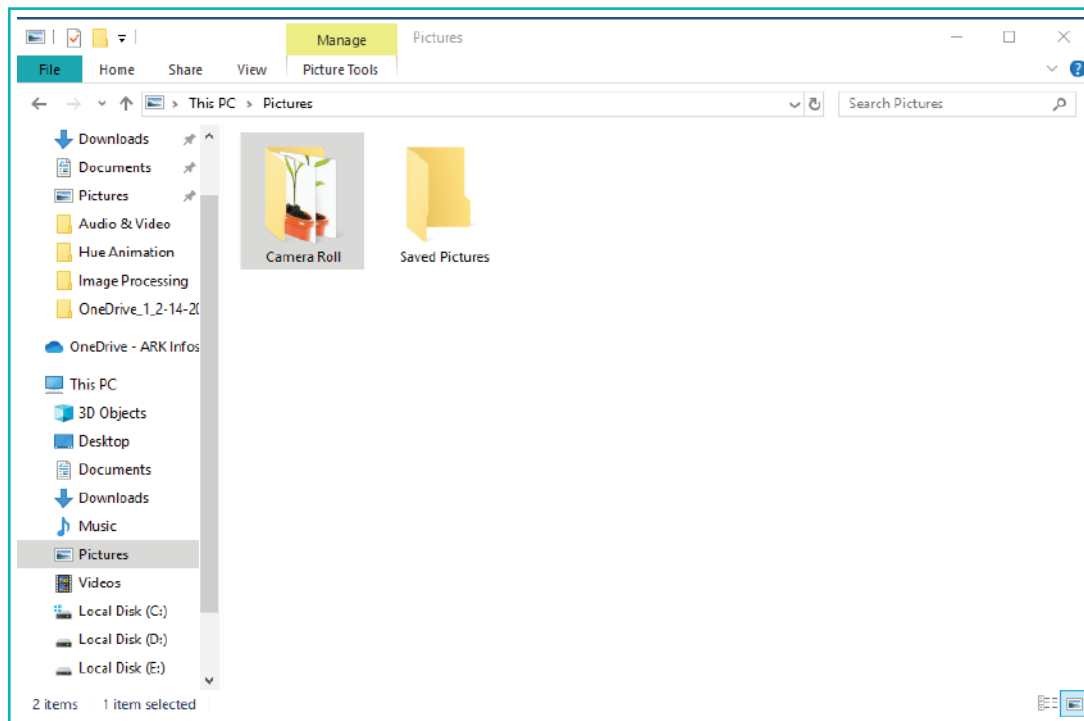

- We can view the saved image in its computer location.
- If the setting has not changed, the photo gets saved in the “**Camera Roll**” folder.
- Open “**This PC**”

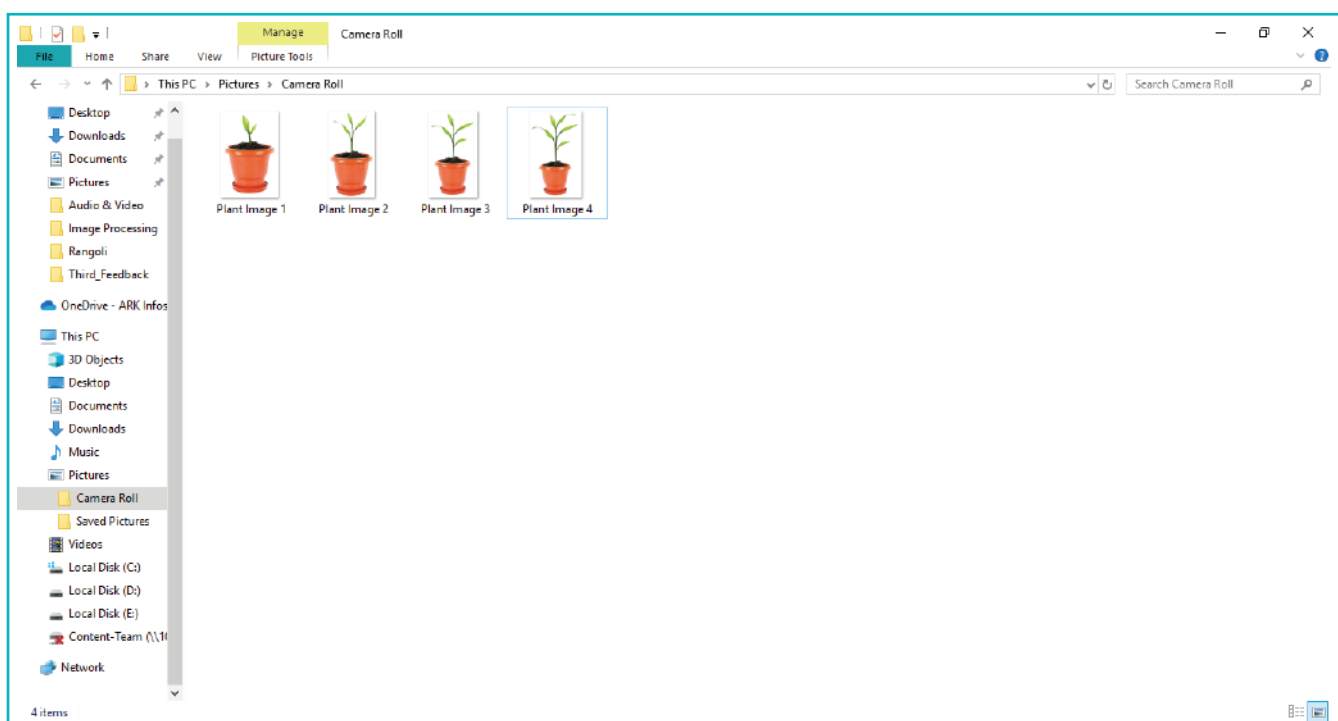

- Open the folder called “**Pictures**”

- Open the folder called “**Camera Roll**”

- You can now see the **images** you have **captured**.

Exercise

State whether True or False

1 To capture an image is an art called photography.

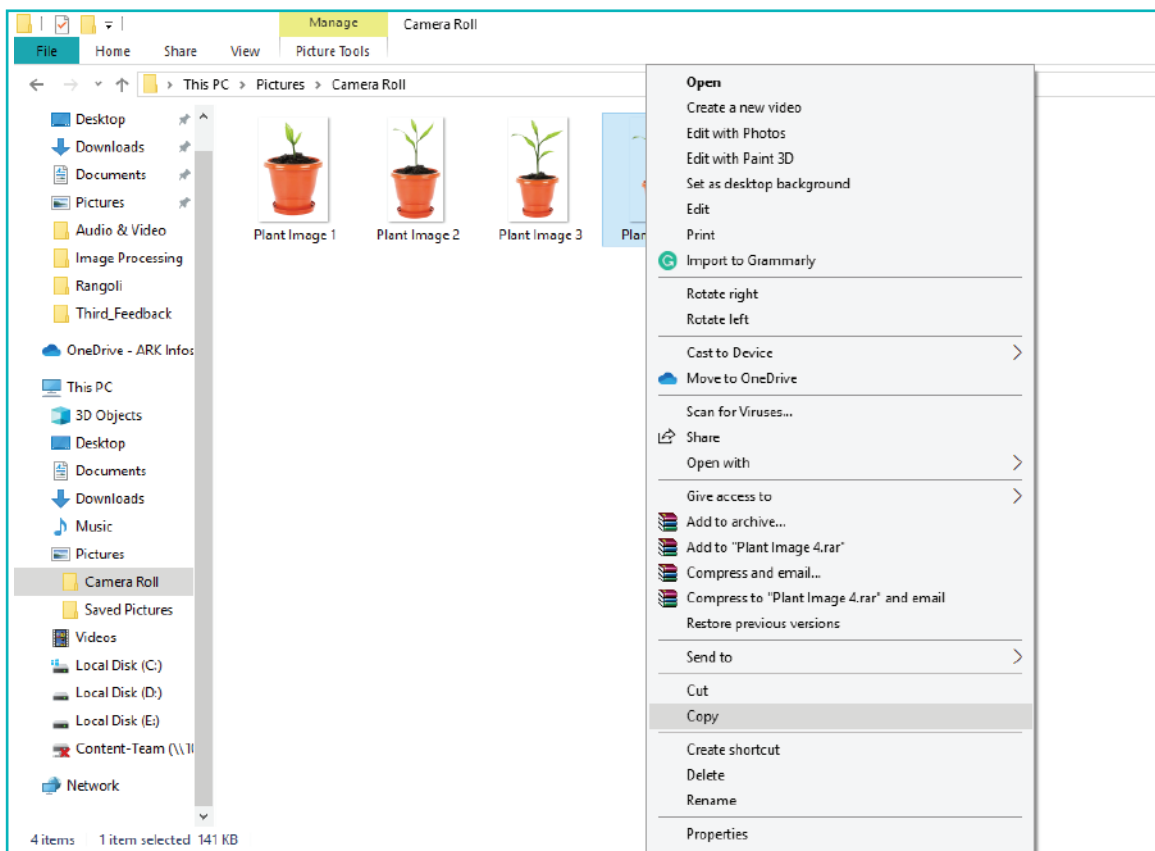

▲ _____

2 If any setting is not changed then the photo gets saved in “Camera Roll” folder.

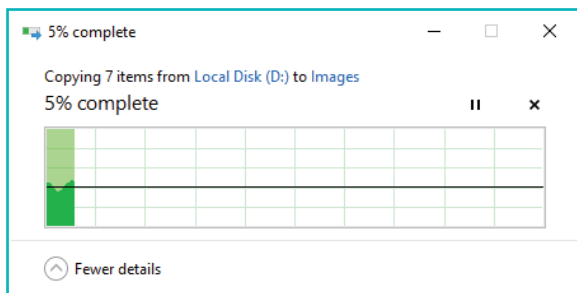

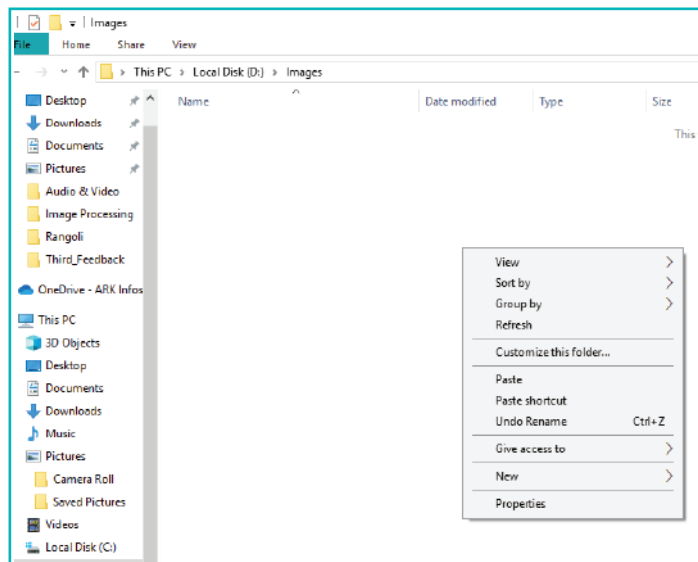

▲ _____

Let us learn how to transfer an image to a different location.

- **Right click** on the **image** and select **copy**.

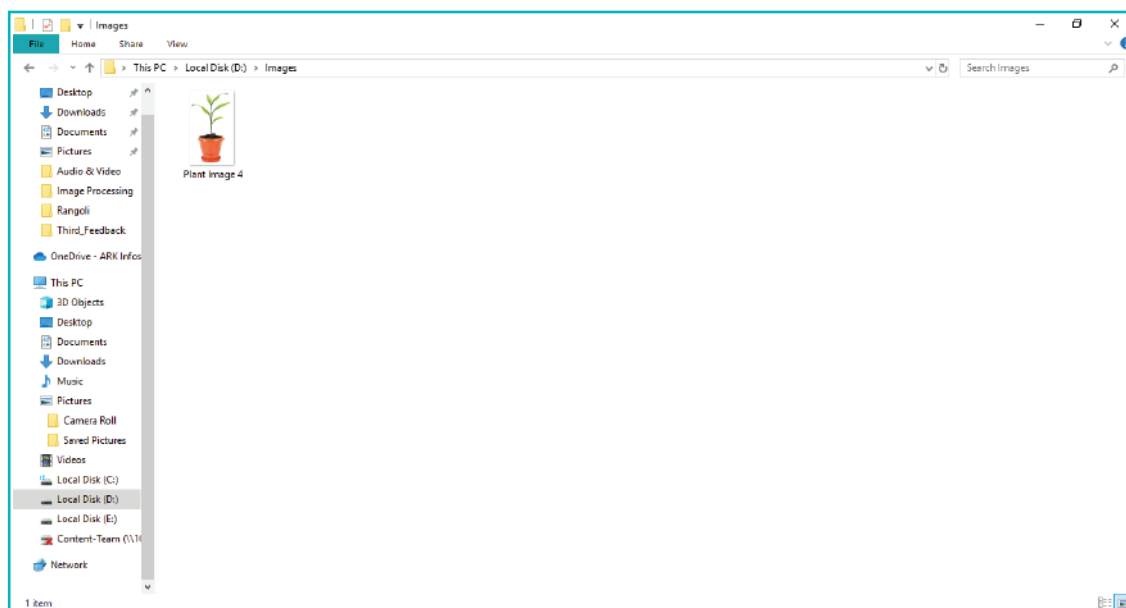

- Go to the **new location**. Right click and select **paste**.

- We can see the **progress** of the file transfer. This shows us how long it will take.

- Now, you can see the **images** in the **new location**.

Exercise

Fill in the blanks

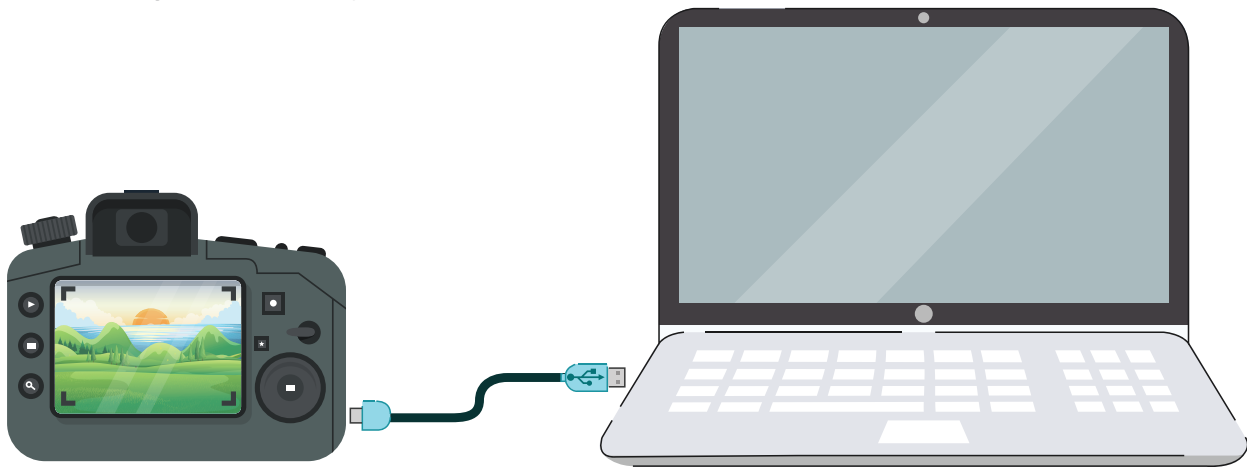

- 3 To copy the image, _____ on the image and select copy.
- 4 To paste the image, right click on the image and select _____.

Most of the time we capture images with other devices. We use a smartphone, digital camera or tablet. But a computer has space to save more data. This is why we need to transfer data to our computer. This way we can store it for a long time.

Let us learn how to transfer an image from a digital camera to a computer.

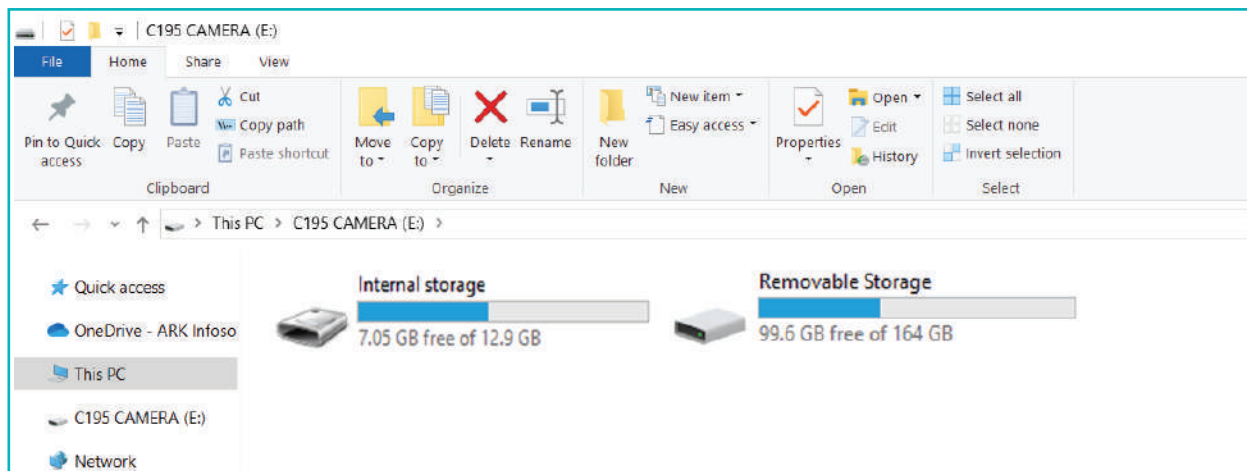

A digital camera is an external camera. We can capture images on it and then send them to our computer.

- Connect the digital camera to your computer.

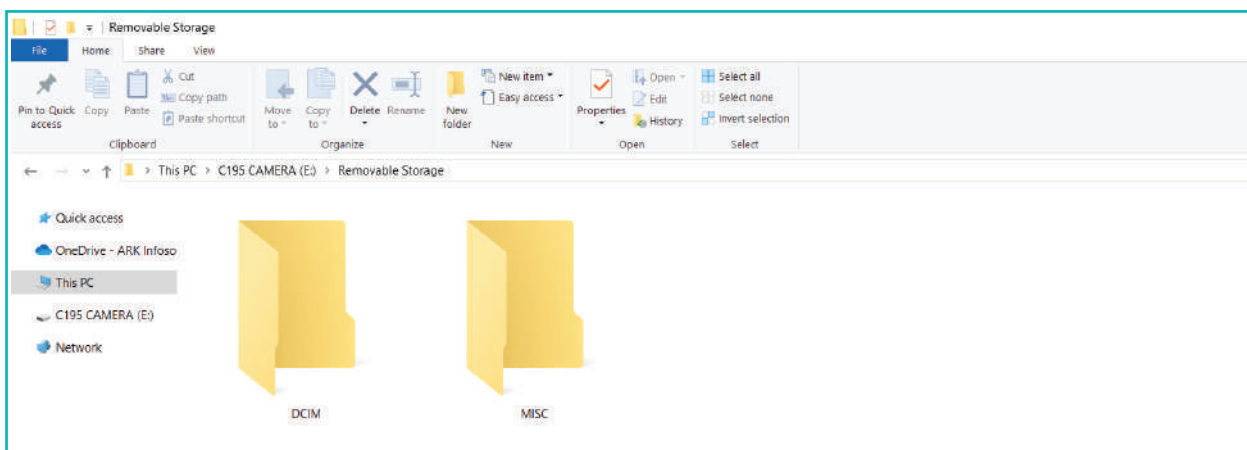

- Open “This PC”. You will see the name of the camera. Click to open it.
- Select the folder “Removal Storage”.

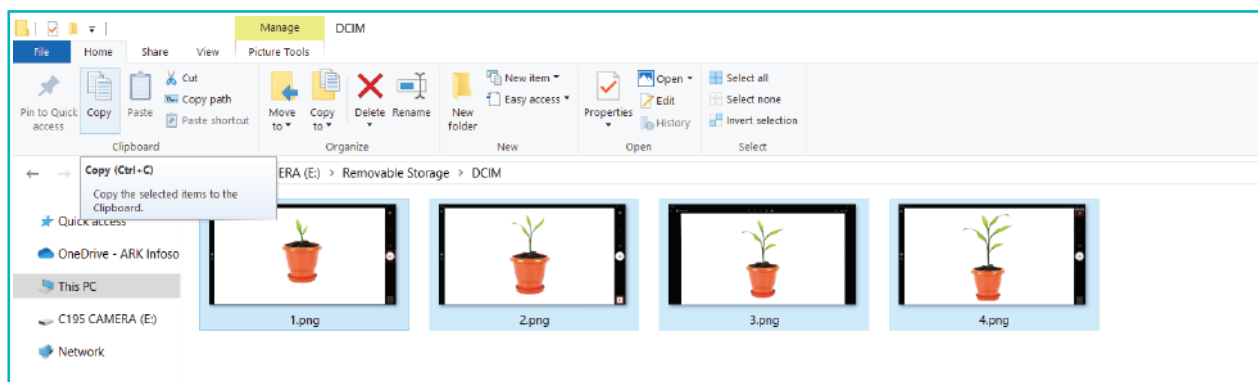

Sometimes there may be two drives. “**Internal Storage**” and “**Removable Storage**”. Open “**Removable Storage**”. Internal storage stores data inside a computer. Removable storage is an external device used to save data.

- Open the folder “DCIM”

- Select your **image** from the **folder**.
- **Copy** and **paste** it at any location you want.

In this way, we can **click pictures** from any **device** and **transfer** them to our **computer**.

Tech Flash

- 1. Photo Gallery** : An application used to view pictures.
- 2. Photography** : The art of capturing images. “Photo” means light.

Future Tech

Image processors

Image processors help cameras to identify objects and measure distances. This is used to add effects, improve colour and light. It enhances the picture quality.
