

Audio and Video

10

Lily, I forgot to switch off the fan in my bedroom! I will go and switch it off now.

Okay, come back quickly. I will pause the video till then.

We listen to music and watch videos many times. They are interesting and give us lot of information. **Music** and **videos** are saved in different types of files. File type is also called file format. This tells us the type of data the file holds. There are some commonly used **audio** and **video** formats :

Audio format :

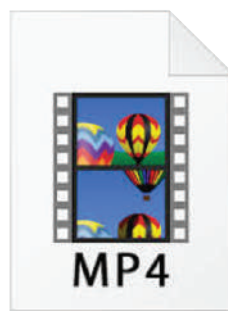

.wav

.mp3

Video format :

.mp4

.avi

.mov

Exercise

Fill in the blanks

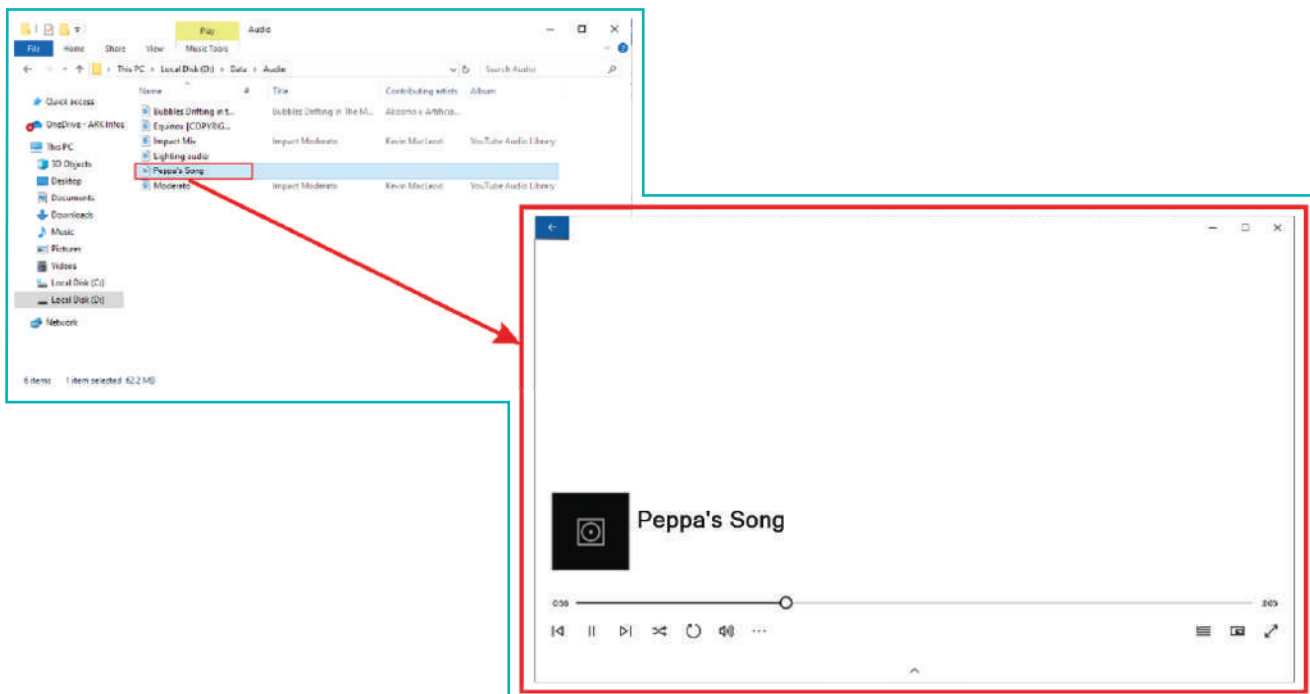

- 1 File type is also called as _____.
- 2 .wav is a type of _____ format.

Let's learn about different operations on audio and video files.

When double-clicked on an audio file, it opens in the software that is already available. “**Groove Music**” and “**Windows Media Player**” are two such software. Like an audio file, video files too open in video player, such as, “**Movies and TV**”. There are few other software that we can use to play **audio** and **video**. They need to be installed separately. Some examples are VLC, QuickTime.

How to open an audio file?

- Go to the folder containing the audio file
- Double-click on the file to open

Play and pause an audio file

- To play an audio, click the play  button.
- To pause an audio, click the pause  button.

An audio player has more options. This is what “Groove Music” looks like :

Sound thumbnail, Soundtrack name and Artist name

Shuffle

Play previous soundtrack

Play next soundtrack

Repeat track

Volume control

Healthy Practices:

Listen to audio files on **low volume**. Loud sounds can **damage our eardrums**.

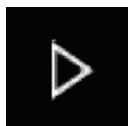

We can play a video file in a video player in the same way as we play an audio file in an audio player. Both media players have the similar functions. Following are some functions of “**Movies and TV**” software.

This button is used to **switch to full screen view**.

Volume controller

Play button

Seek back 10 seconds

Seek forward 30 seconds

Exercise

Match the following

3

a.

e. Seek back 10 seconds

b.

f. Switch to full screen view

c.

g. Volume controller

d.

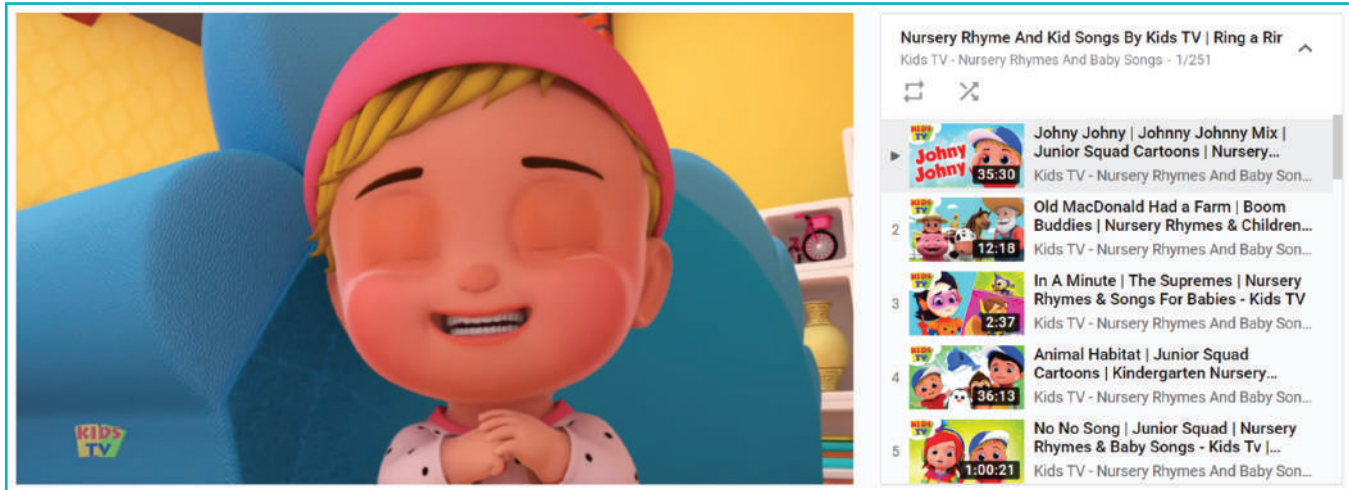

h. Play previous sound track

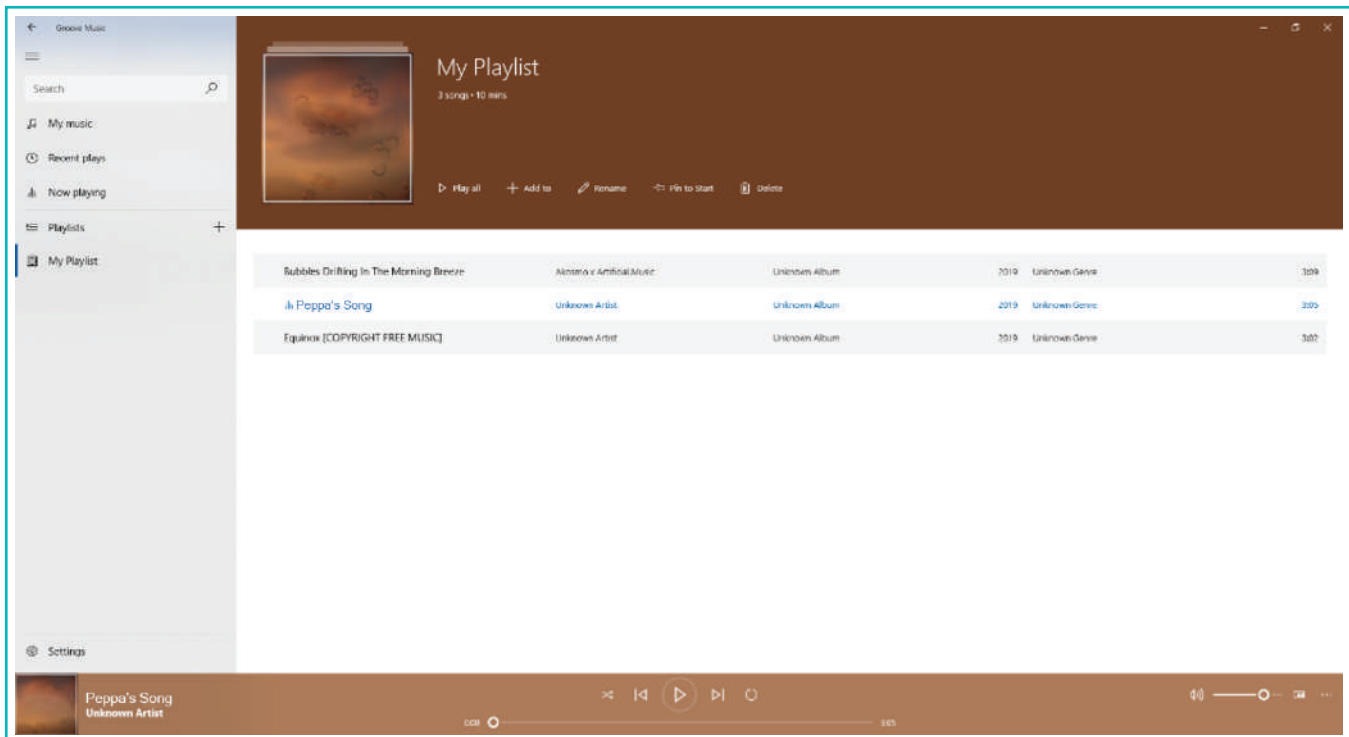

Playlist

Sometimes we want to play many audios or videos continuously. To play them one after another, we can create a playlist. A **playlist** is a list of our **favourite audio or video** files. The files from the list play automatically. We need not to press the play button for each file. We can set the files to play in a sequence or at random.

Following are some example of playlists.

Video Playlist

Audio Playlist

Exercise

State whether True or False

4 We cannot create a playlist of video files.

5 The songs or video from the playlist can play in a sequence or at random.

Tech Flash

- **Playlist** : A list of multiple audio or video files which play one after the other.
