

Lily, look at this video I made of our dogs playing with a ball.

This looks so cute!

Towards the end of the video, my dog Snoopy runs behind a bush. I cannot see him after that. I want to remove that part from the video.

Oh, don't worry, we can remove it from the video. Let's try to edit this video.

Multi = more than one

Media = type of communication

Multimedia

Recall:

Multimedia is when more than one mode is used for communication. These types of files are considered Multimedia:

- Text – Documents that contain only text.
- Graphic – Images and drawings.
- Audio – Sound and music files.
- Video – A clip created or shot with a camera.

Video Editing

Video editing is the process where small video clips are modified and put together to create a complete video. A video clip is a short video.

The need of Video Editing

We edit videos when we want to use different images, video clips and sounds. We can do different things when we edit a video:

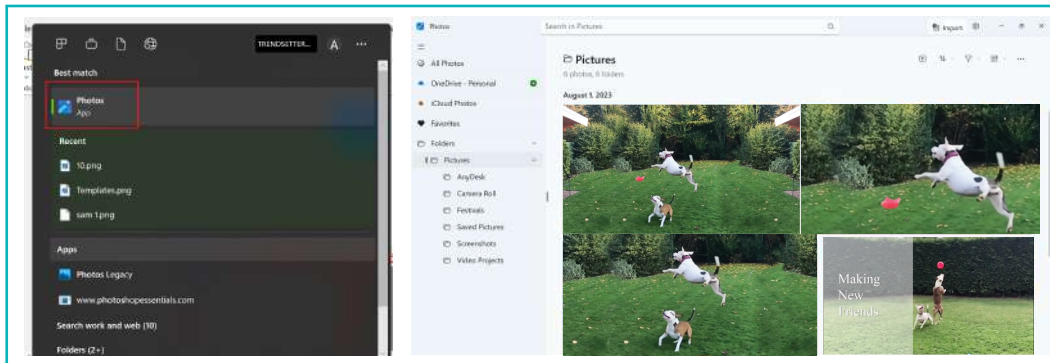

- Add text to make it informative
- Add music to make it enjoyable
- Split a video into parts
- Crop to remove the parts we do not want

To edit a video, we use the Video Editor software

The need of Video Editing

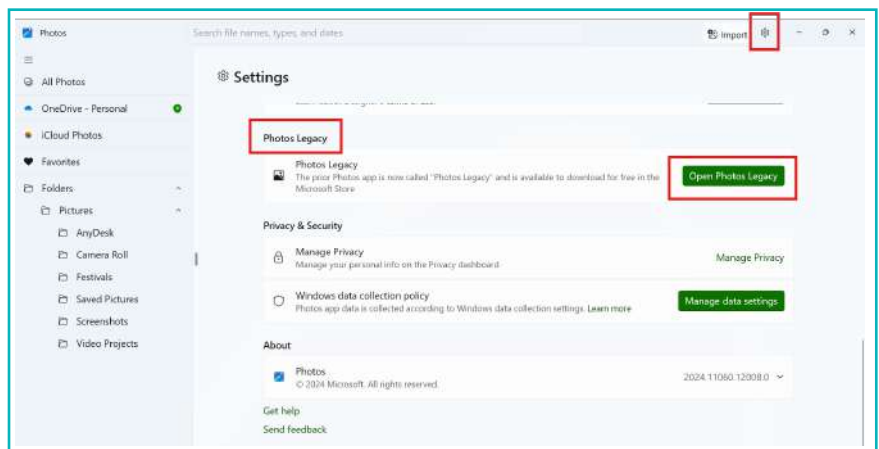

To open the Video Editor on your device, follow the given steps:

1. Search Photos App in the search bar.
2. Click and open it.

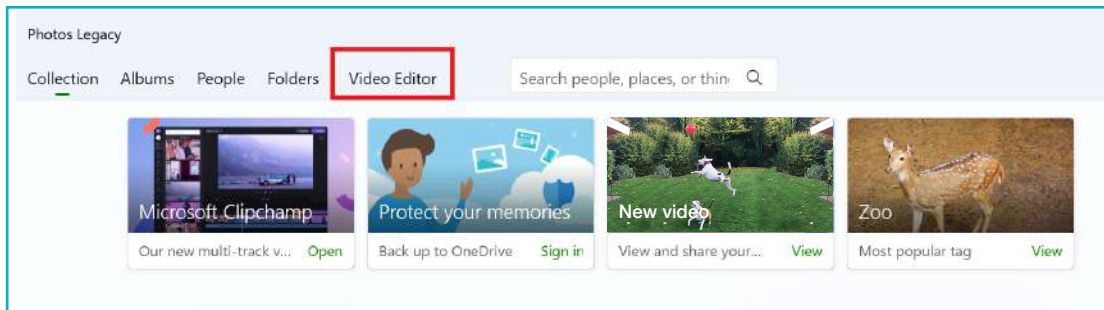

3. To open the video editor, click on setting option.

- Scroll down and search for Photos Legacy then click on Open Photos Legacy.

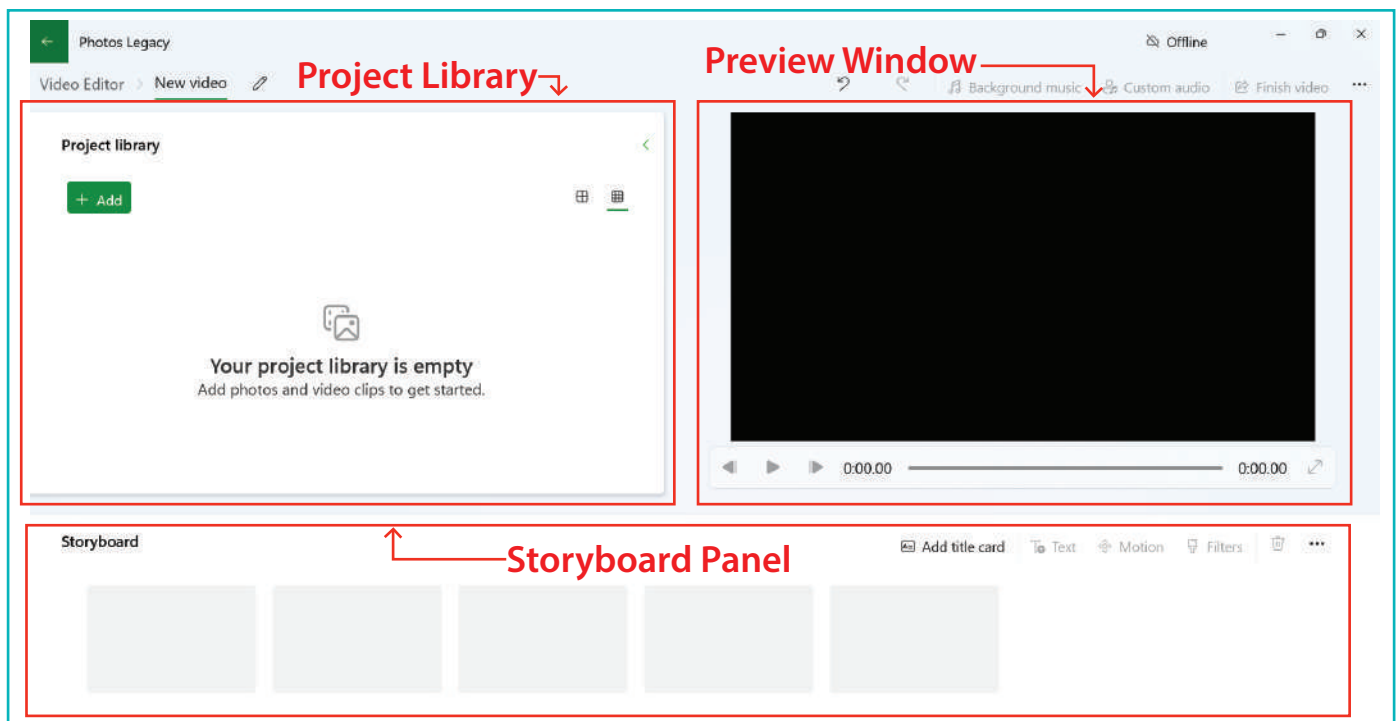

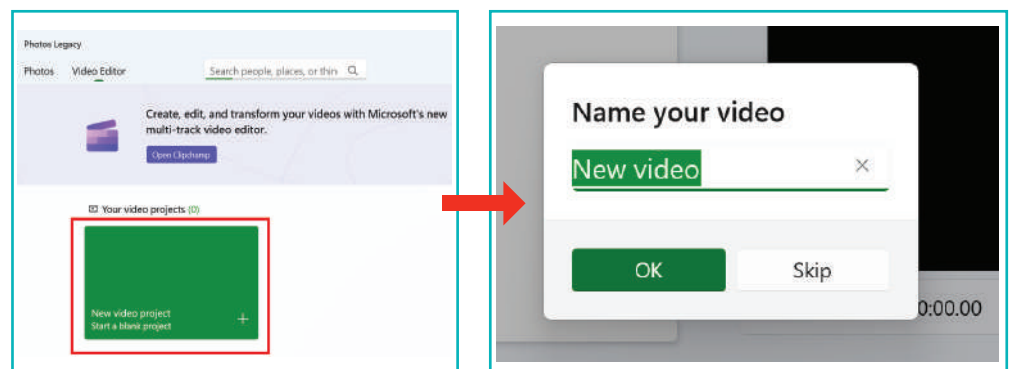

4. In the Photos Legacy window you will see the option of Video Editor, click to open it.

When we open the New video project, this is what we see:

Give the name to your video project or skip it.

Project library:

This has all the images and videos to create the final video.

Storyboard panel:

This is the area where we arrange all the videos and images. It also has options to edit each clip separately.

Preview window:

This shows a preview of how the final video would look.

Tools

Storyboard

- | | |
|--|---------------------------------|
|  Add title card | Create a blank slide for titles |
|  Trim | Trim a clip |
|  Split | Split a clip |
|  Text | Add text to a clip |
|  Delete | Delete a clip |

Actions

- | | |
|---|------|
|  | Undo |
|  | Redo |

Audio

- | | |
|---|--|
|  Background music | Select background music to add it in the video |
|---|--|

Export

- | | |
|---|--------------------|
|  Finish video | Export final video |
|---|--------------------|

Add Title Text

We can add information in a video with the help of text. Text can help to introduce the video or parts of it.

To add a title card:

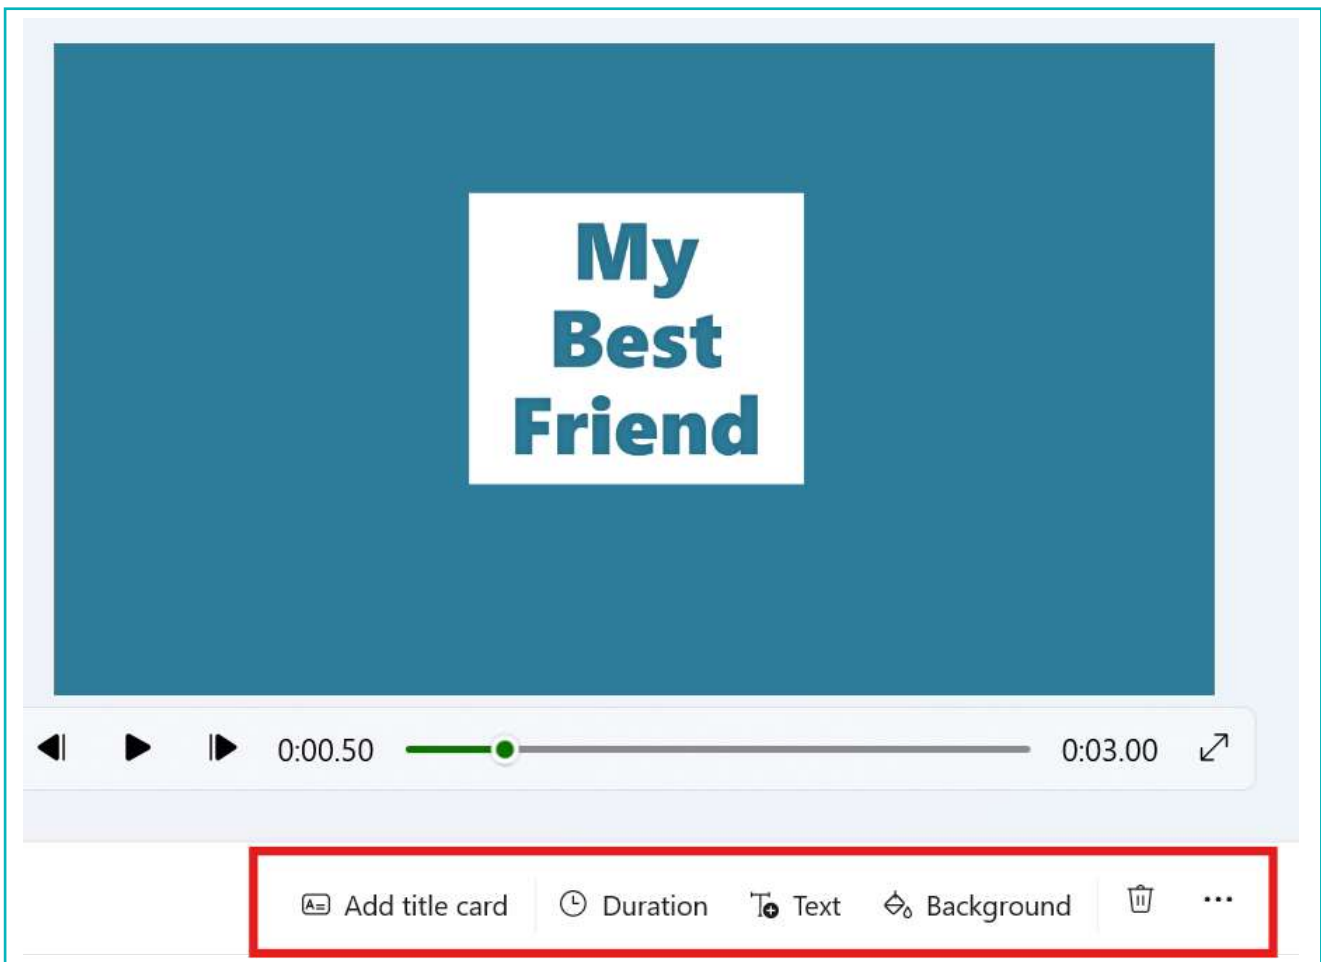

We can use this to add a slide that introduces the video.

To add a title card **Click on** -

 Add title card

This tool creates a coloured card. We can use different options to edit it.

- We can set the duration, text and background as needed.

Split the Video

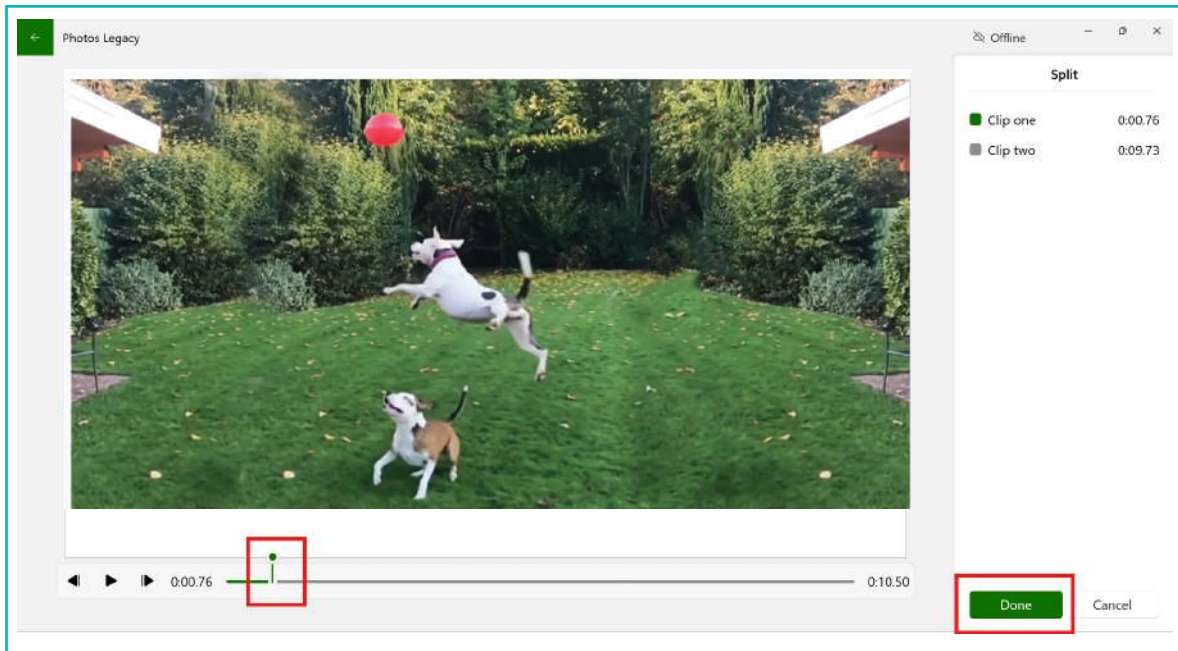

We split the video to remove parts of the video that we do not need. This divides the video clip into parts. We can choose to keep what we want.

For example: The part where snoopy runs behind a bush can be split.

Select the clip in the storyboard and **Click on -**

 Split

- Place the **marker** on the time duration you want. Click **“Done”**.

Activity

 Split the clip at the time : 9 sec.

- Place the marker at the 9th second on time line. Click on Done.

Trim the Clip

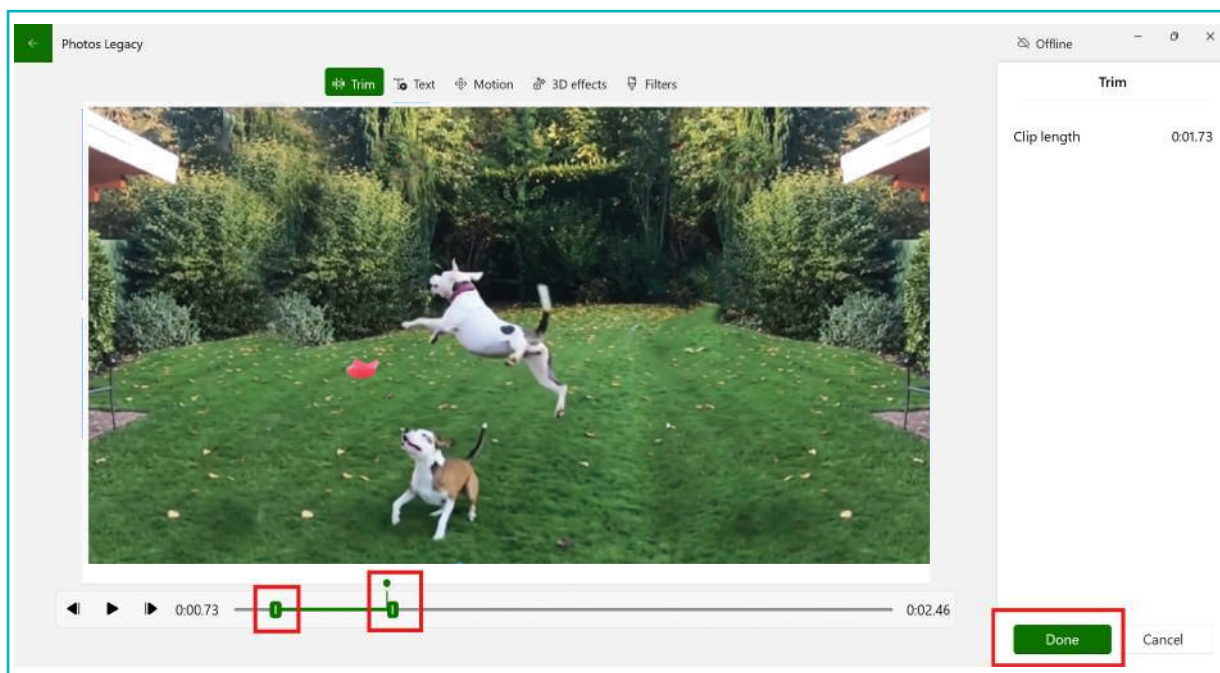

Deleting the extra part of the video and keeping the part that is required. We use trim when we have to delete some of the unwanted part of the video.

For example: The part where Snoopy runs behind the bush can be trimmed from the video.

Select the clip and **Click on -**

 Trim

- **Splitting:**
separating a video to divide it into parts. All the parts can be used later.
- **Trimming:**
cutting different parts of the video (the unwanted part will be removed)
Set markers  and  at the Start and End time. Click on “Done”.
- Look for the clip length at the right side of the clip.

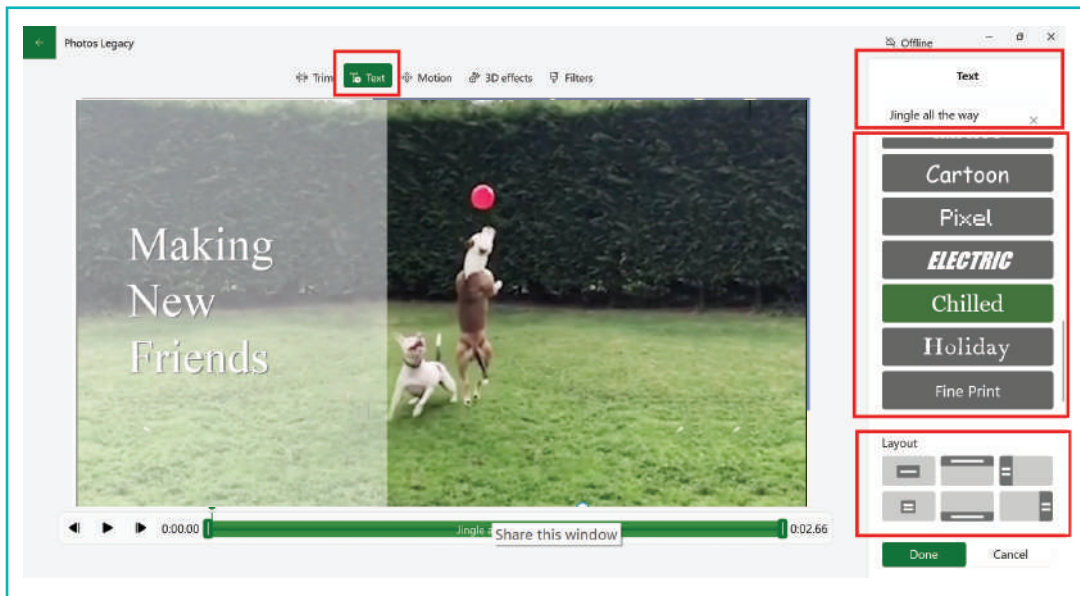

Add Text

We can also add text to the clip. This is similar to the Add Title text option.

Select the clip and **Click on -**

 Text

1. Type the words you want in the text area.
2. Select a style and layout for the text.
3. Set the time when the text should appear in the video.
4. Once all the properties are set, click on Done.

Activity

Trim the duration of the clip to 15 sec. Add text to the same clip.

Exercise

State whether True or False

- 1 When we split a video clip, we take out a part from the video.
▲ _____
- 2 “Add title card” is an option used to add a slide for introduction.
▲ _____
- 3 Storyboard Panel is a collection of all the images and videos to be used in the video.
▲ _____

11. Edit Video

Add Music

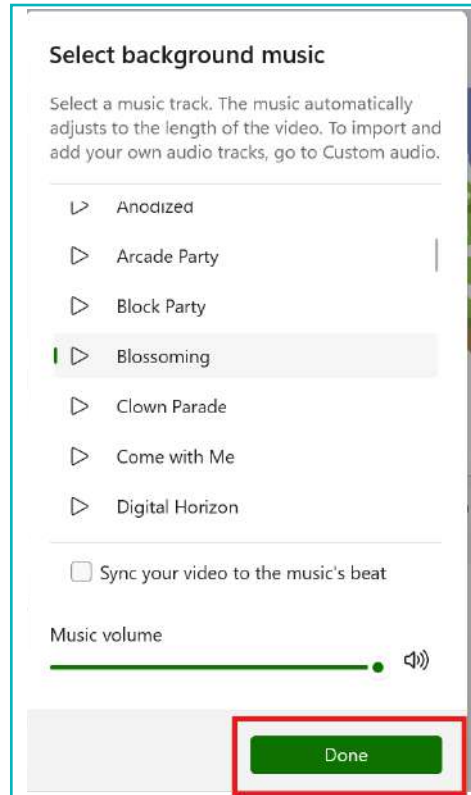

A video can become attractive and enjoyable when we add music to it.

Example : Movies and cartoons

To add background music **Click on -**

 Background music

Select the music you want. Click on **Done**.

- If we click the Play button, we can hear the music before it is added in the video.

Export Video

- After applying all the edits to the video clips, we have to export it into a single video.

To do this, **Click on -**

 Finish video

Setup export settings:

After we click on Finish Video, a new window will appear. This is to set properties. Set video quality to High (lower if needed).

11. Edit Video

Click on **export**. Set the export location. This is where the video will be saved.

Export Video

The final movie after trimming, splitting and adding text will look like this.

Yes. Let's show it to our friends.

Now my video looks complete with music and title! Thank you for helping me, Lily.

Exercise

Match the following

4 Match names with the correct tool icons.

a. Split a clip

b. Undo

c. Add text to the clip

d. Create a blank slide for titles

e. Rotate the clip

Tech Flash

1. **Video Editing** : The process with which we trim and arrange video clips. This creates a new video.
2. **Split** : Divides the video clip into parts.
3. **Trim** : Cuts out a part from the video clip.

Future Tech

Video Stabilization

Shooting a video by holding a camera or phone in hand is challenging. There is often shaking or vibration in recorded videos. Video stabilization takes away unwanted jitters and blur. This results in a clean and smooth video.
