

Application of Spreadsheets

Let's revise everything we've learnt about spreadsheets and where we can apply them in our day-to-day life.

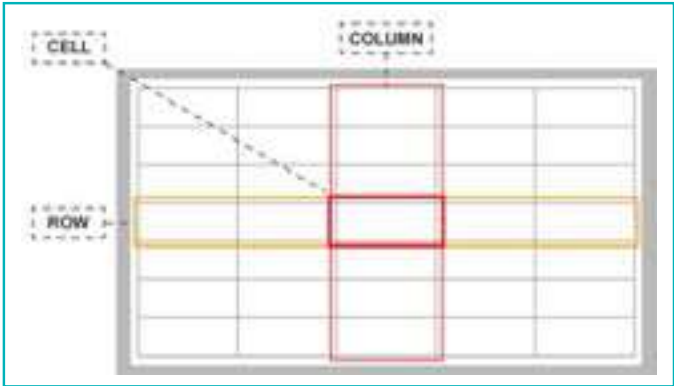

A spreadsheet can be used to complete different kinds of tasks. It can be used in various ways.

Recall:

A **spreadsheet** is a computer program that looks like a worksheet and is used to organise, analyse, and store data. It consists of rows and columns.

	A	B	C	D	E	F
1						
2						
3						
4						
5						

- A Spreadsheet contains cells in a grid of rows and columns.

- Information can be stored in cells in the form of numbers or words.
- Columns** are denoted by alphabets and Rows are denoted by numbers.

	A	B	C	D	E	F
1						
2						
3						
4						
5						
6						
7						

- The height of rows and width of columns can be changed to fit the information inside the cell.

	A	B	C	D
1				
2				
3				
4				
5				

- Every cell has a unique name called a 'cell reference'. It is made up of its column heading and row number.

For example:

The first cell in a spreadsheet is A1, since the column heading is 'A' and the row number is '1'.

	A	B	C	D
1				
2				
3				
4				

Uses of Spreadsheet

• Multiplication Table

A multiplication table can be created with spreadsheet formulas. A table like this lets us view multiples of different numbers.

Multiplication Table										
	1	2	3	4	5	6	7	8	9	10
1	1	2	3	4	5	6	7	8	9	10
2	2	4	6	8	10	12	14	16	18	20
3	3	6	9	12	15	18	21	24	27	30
4	4	8	12	16	20	24	28	32	36	40
5	5	10	15	20	25	30	35	40	45	50
6	6	12	18	24	30	36	42	48	54	60
7	7	14	21	28	35	42	49	56	63	70
8	8	16	24	32	40	48	56	64	72	80
9	9	18	27	36	45	54	63	72	81	90
10	10	20	30	40	50	60	70	80	90	100

We use a multiplication formula for this kind of table like, C4 = C\$3 * \$B4.

• Grade list

A grade list helps us store and analyse student grades for various subjects.

Class 4 - Grade List				
Sr. No.	Student Name	Math	English	Hindi
1	Manoj	A	B+	B
2	Narendra	B+	A	A+
3	Rajani	A+	A	A+
4	Smita	B	B	A
5	Suhana	A	A	B

• Class Timetable

This kind of spreadsheet arranges classes for each day and helps us remember the week's timetable.

Grade 4 - Weekly Time-Table						
	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
8:00 AM	English	Maths	ICT	English	Maths	Music
9:00 AM	Maths	English	Hindi	Hindi	English	Hindi
10:00 AM	RECESS					
11:00 AM	Hindi	Hindi	English	Maths	EVS	English
12:00 PM	EVS	EVS	Maths	EVS	ICT	ICT
1:00 PM	RECESS					
1:30 PM	Music	Maths	EVS	Maths	Hindi	
2:30 PM	Sports	Hindi	Sports	Sports	Music	

Distance chart

The **Bar Graph** option is used to create a distance chart. A distance chart helps us analyse the distance between different locations.

Exercise

Fill in the blanks

- 1 Information can be stored in _____ in the form of numbers or words.
- 2 Every cell has a unique name, called a _____.

A **Spreadsheet** stores information in columns and rows. This arrangement of information can make calculations simple and accurate. Numbers, texts, charts, graphs, and formulas can be added in a spreadsheet. This can make it easier to understand and analyse the information.

Bytes

- A **spreadsheet** can have up to 512 fonts.
- It has 1048576 rows ranging from 1 to 1048576.
- It has 16384 columns ranging from A to XFD.

Spreadsheets can be used in so many places.

Spreadsheets are so useful.
