

Sister, in class today we read "A River's Tale". Our teacher asked us to make a presentation about it. But I don't know how to make one.

What fun! Making a presentation is very interesting, let's make one now!

What is a presentation and when should we use one?

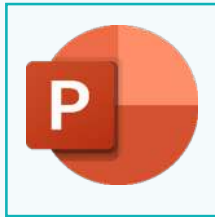

A Presentation is a way of communication to get a message across to an audience. It generally uses visual aids to help communicate.

A presentation helps us convey our thoughts in a more effective manner than just speaking. We can add images, videos, and sounds to a presentation to make it attractive. Various computer applications can be used to create presentations.

For example: Keynote, PowerPoint, OpenOffice - Impress, Google slides, Canva, etc.

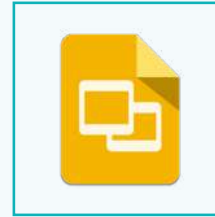

Keynote

PowerPoint

Impress

Google Slides

Canva

In this lesson, we will learn to make a presentation in Microsoft PowerPoint.

Activity

Let's help Keya! We will make a presentation on "Water Pollution" in this lesson.

First, we will plan the flow of the presentation. This helps us organise the information to make the presentation effective.

This is how we will structure slides in our presentation:

- Slide 1: Title and Author
- Slide 2: Facts about water
- Slide 3: What is water pollution?
- Slide 4: How does water get polluted?
- Slide 5: How does water pollution affect us?
- Slide 6: How can we prevent it?
- Slide 7: Conclusion

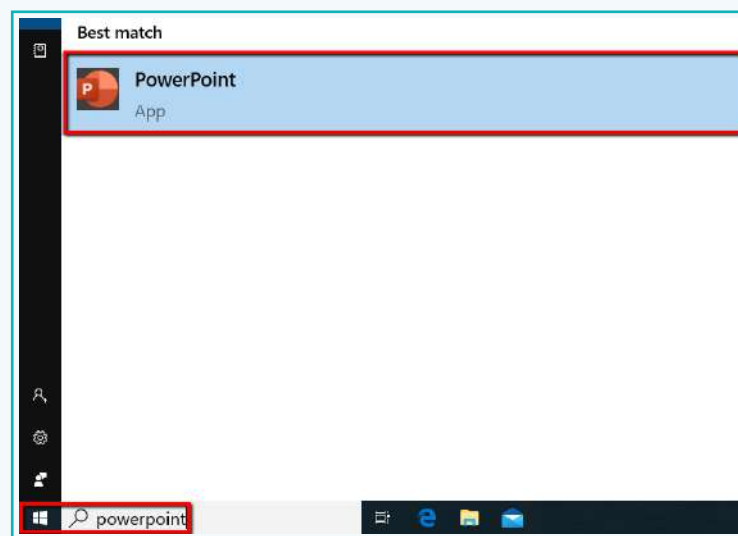

Bytes

We can use a template to make a presentation. Each template has images and a predesigned layout for us to fill information in. This makes it quick to create a presentation.

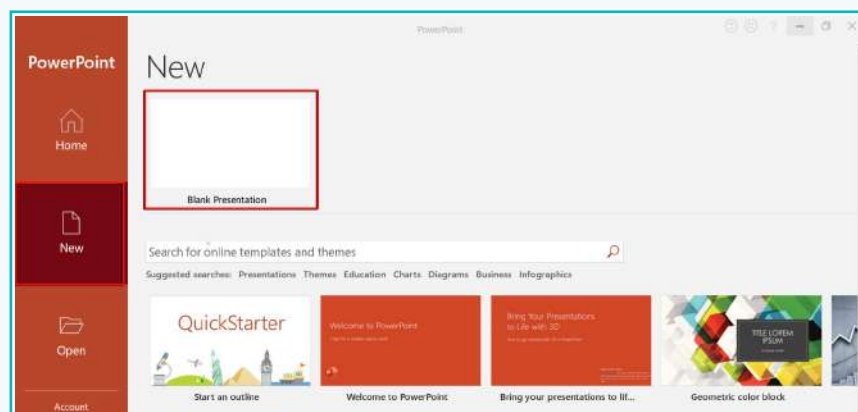

Activity

To create a presentation, open PowerPoint.

Type “PowerPoint” in the search bar and double click on the icon to open the application.

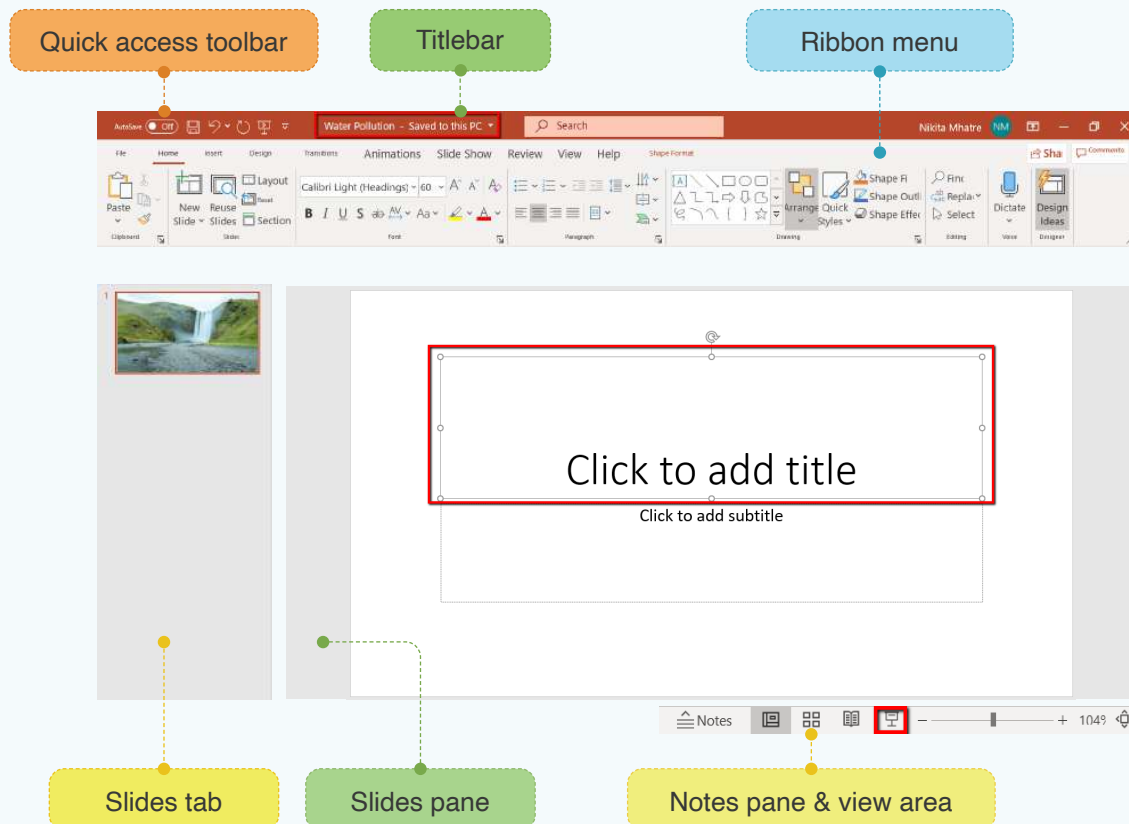

When the window opens, select 'Blank Presentation'. This lets us customise the presentation to the way we want it to look.

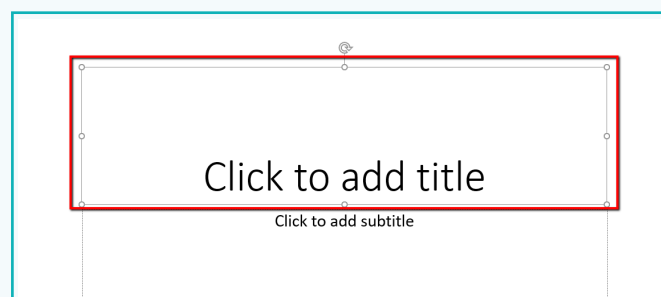

After we select 'Blank Presentation', an empty PowerPoint presentation opens.

Activity

- The **Slides pane** displays the current slide in the presentation. This is where we design and add content to the slide.
- A page in a presentation is called a Slide.
- Slides can contain text, images, charts, graphs, tables, audio, and videos.
- The dotted boxes on the slides are called **Placeholders**.
- Content is added into placeholders. It can be text, images, or videos.
- The placeholder boxes can also be resized, added, or deleted.

Activity

The first slide is generally used to write the title and author of the presentation. We will call our presentation “Water Pollution”.

- Click on the placeholder to add text and type the title of the presentation. Use the second placeholder to write the author.

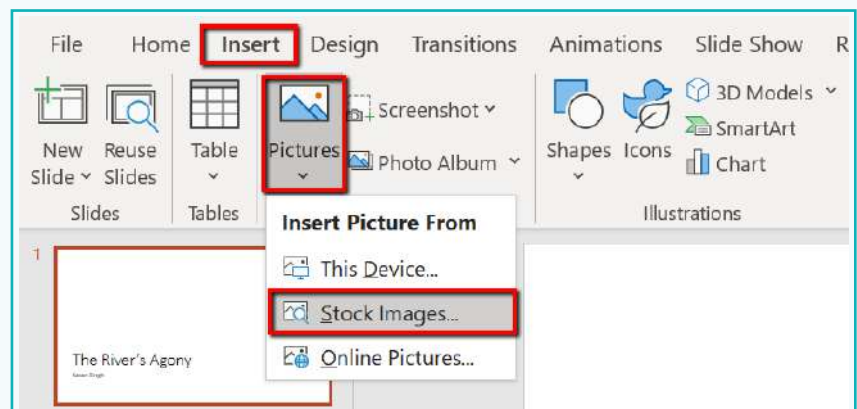

Images make a presentation look better and make it effective. Commands to insert a picture are in the ribbon.

- The **Ribbon** consists of various commands used for different actions in a presentation. They are grouped into categories.

PowerPoint has a library of images. We will pick one of those for the title slide.

- Click on the Insert tab.
- Select Stock Images.

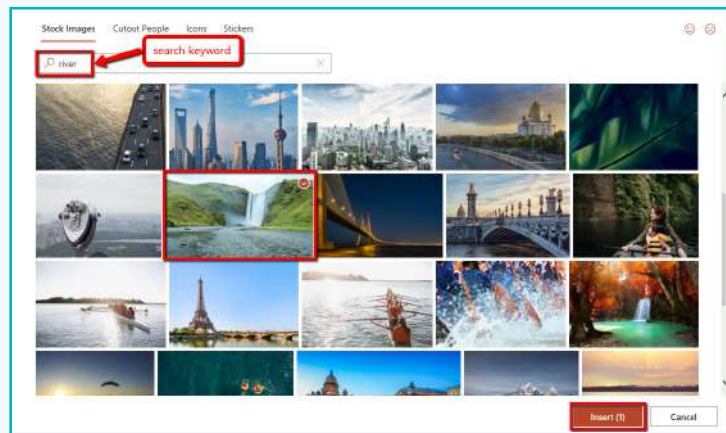

Note:

To make the presentation attractive, use different text sizes. Use a bigger font for the title and a smaller font for the author.

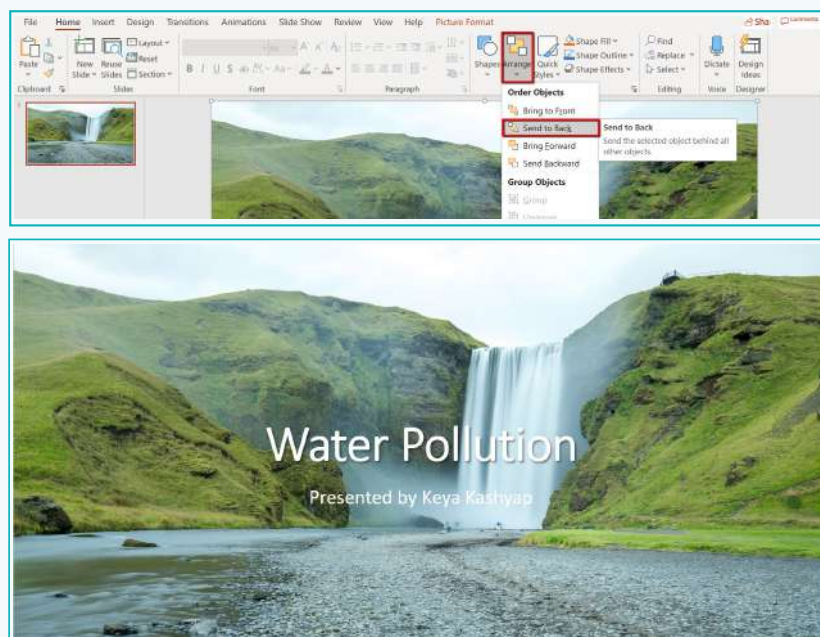

Activity

- Write keywords for the image required in the search box. Since our presentation is about water, we can use “River” as a keyword.
- Select an image and click on Insert.

Right now, the title is covered by the image. The image should be moved backwards so we can read the title.

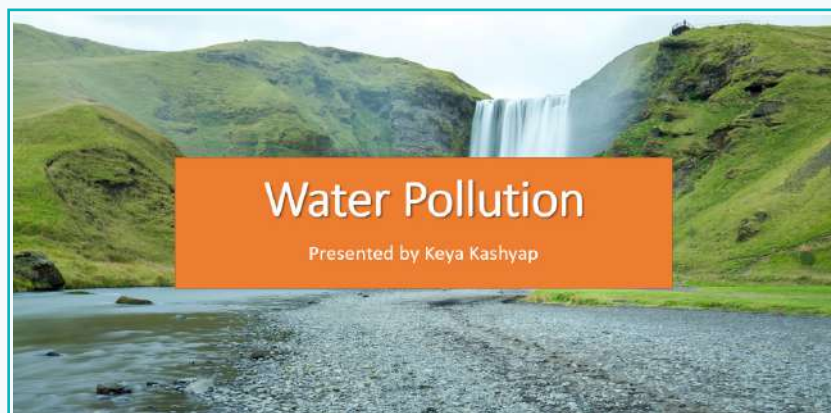

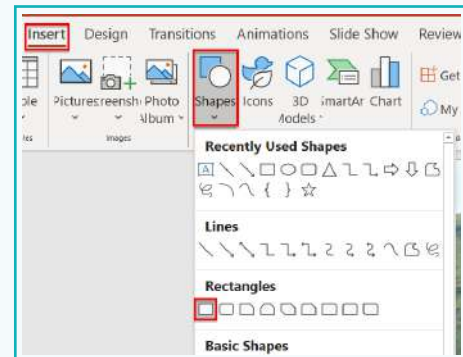

- Select the image and move it behind the text.
- Click on Arrange, then select Send to Back.

Activity

The white text is still not clear. We will highlight it with a background shape in a different colour.

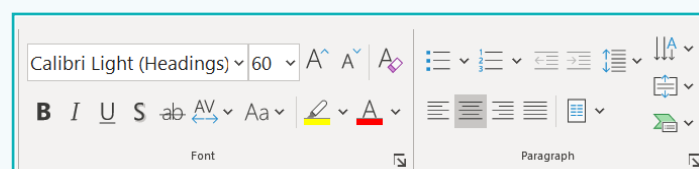

- Click on Insert and Shapes.
- Click on the Insert tab.
- If the shape appears in front of the text, use Arrange to send it to the back.

Note:

To highlight the text, use a contrast colour for the box. The text and shape should not have similar colours.

To change the text formatting, we will use the formatting and alignment commands in the ribbon.

Activity

Calibri Light (Headings) ▾

Font - Sets the font for the selected text. Each font has a style and typeface.

B *I* U

Font Style - Bold, Italic, and Underline are the available font styles. A font style is used to put emphasis on some text.

A ▾

Font Color - Sets the colour of the text.

60 ▾

Font Size - Sets the font size. The font size or text size is the size of the characters.

S ~~ab~~

Font Properties - Shadow and strikethrough are font properties. Shadow adds shadow to the selected text. Strikethrough adds a horizontal line over the text, used to show cancelled text.

≡ ≡ ≡ ≡

Font Alignment - Sets the text alignment. It can be aligned to the left, centre, right, or justified.

Try out different styles for the text. Move it around to see where it looks best.

Exercise

 Tick mark ☒ the correct answer

1 What is a page in the presentation called?

a. Slide ☐

b. Title ☐

c. Page ☐

d. View ☐

2 Under which tab can we find Pictures?

a. Home ☐

b. Design ☐

c. Insert ☐

d. Review ☐

3 Which of the following is not used to create presentations?

a. PowerPoint ☐

b. Notepad ☐

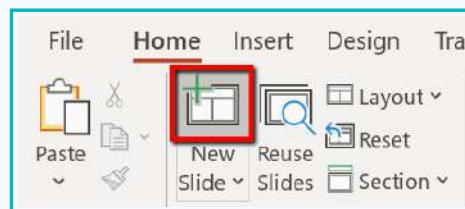

c. Keynote ☐

d. Google Slides ☐

Activity

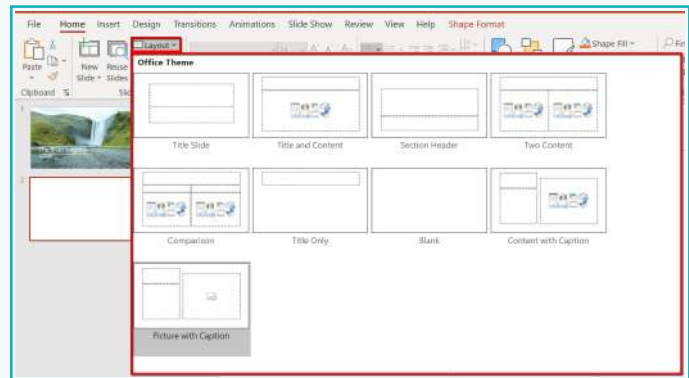

With this, our first slide (title slide) is complete. Let's move on to the next slide.

- Go to the Home tab.
- Click on New Slide.

Activity

We select the layout for each slide based on the content we plan to add to it. The arrangement of placeholders on a slide is called a Layout.

Our second slide contains facts about water. We want an image as well as text on this slide. For this, we will choose the layout “Picture with Caption”.

To add text, click on the placeholder.

Note:

- Use a bigger font size for the heading and a smaller one for the text.
- Use short sentences and bullet points to write information. Avoid long sentences & paragraphs.

Select an image from the PowerPoint library or download one from the internet. Add this to the slide, next to the text.

Note:

- The chosen image should be clear and relevant to the topic.
- Align the text and image well to make it look good.

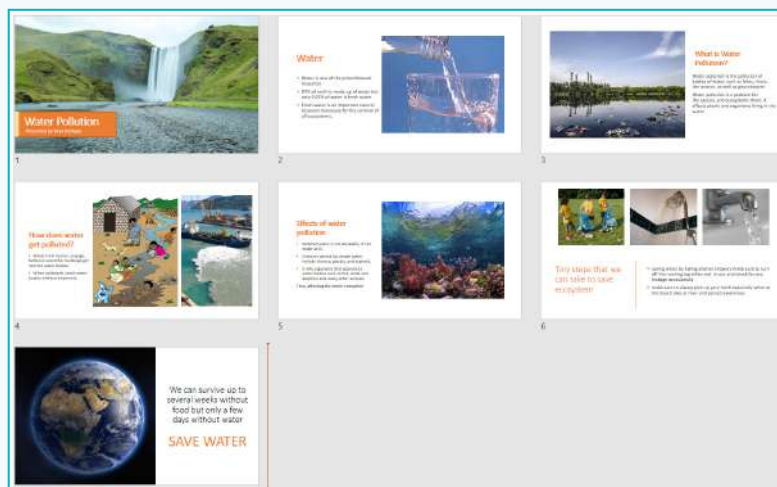

Activity

Water

- Water is one of the prized Natural resources
- 97% of earth is made up of water but only 0.01% of water is fresh water
- Fresh water is an important natural resource necessary for the survival of all ecosystems.

Use different layouts and images to create all the other slides.

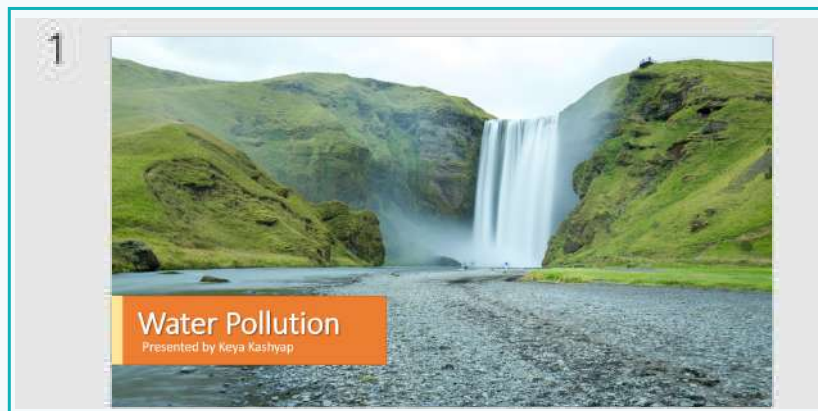

Slides tab: The Slides tab displays all the slides in a presentation as small images. This lets us navigate the presentation easily.

Activity

We can drag the placeholder to change its position. We can also resize the placeholders and images by dragging their corners.

Note:

Always use shift+drag to resize an image or placeholder. This will resize it evenly.

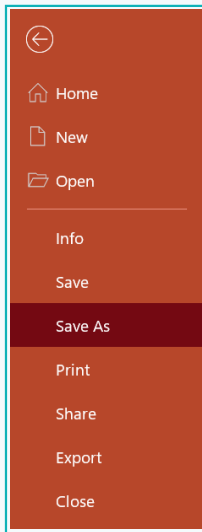

Use different layouts and images to create all the other slides.

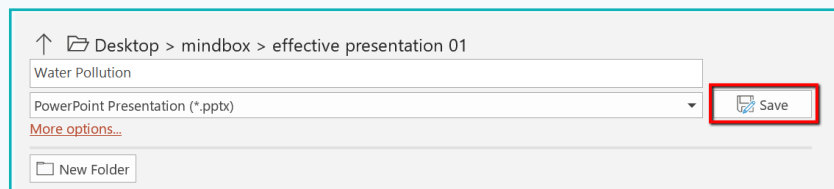

Activity

Once all the slides are ready, save the presentation.

- Click on the File tab.
- Select Save As.

- Choose the destination folder to save the file in.
- Click on Save.
- A PowerPoint file is saved with the extension “.pptx”.

The file name is visible in the title bar.

The **Title bar** displays the software, the name of the current presentation, and minimize, maximize, and close buttons.

We want to use this presentation to talk about water pollution with an audience. The presentation will be showed to them and viewed on a full screen. To display a presentation in full screen mode, we use “Slide Show”.

There are a few different ways to present it as a Slide Show.

- Click the Slide Show button in the View area.

Activity

- Click the Slide Show button in the Quick Access Toolbar.

- Press the F5 button on the keyboard.

Once the presentation starts to play, we can use the arrow keys to navigate.

PowerPoint provides options to view the presentation in different layouts.

The **View area** is located at the bottom right-hand corner of the screen. It consists of buttons that let us switch between different PowerPoint views.

The commands that we frequently need to access can be found on the Quick Access toolbar. The **Quick Access toolbar** contains buttons for commonly used commands.

Isn't it simple to create a presentation? Now you can use this to make school projects and present them in class. You can change the fonts, style and size of the text. You can also add videos and audio to your presentation to make it interesting.

Exercise

Fill in the blanks

- 4 _____ indicates the software, the name of the presentation that is open, and minimize, maximize, and close buttons.
- 5 _____ displays the slides in a presentation as small images.
- 6 The arrangement of placeholders on a slide is called a _____.

I found a video on the internet about water pollution. How can I add it to my presentation?

You can use the Insert tab to add videos, sounds, and anything else to your presentation.

Tech Flash

- **Presentation** : A systematic display of information is a Presentation.
- **Placeholder** : A Placeholder is a box with a dotted outline which holds content.
- **Layout** : The arrangement of placeholders on a slide is called a Layout.
- **Quick Access toolbar** : It contains buttons for commonly used commands.
- **Slides tab** : It displays the slides in a presentation as small images. This view allows easy navigation through slides.
- **Slide Show** : A Slide Show is a presentation of a series of slides. The slide may change automatically and at regular intervals, or it may be manually controlled.
- **Slide pane** : It contains the current slide in a presentation.
