

SmartArt and Hyperlinks

Recall:

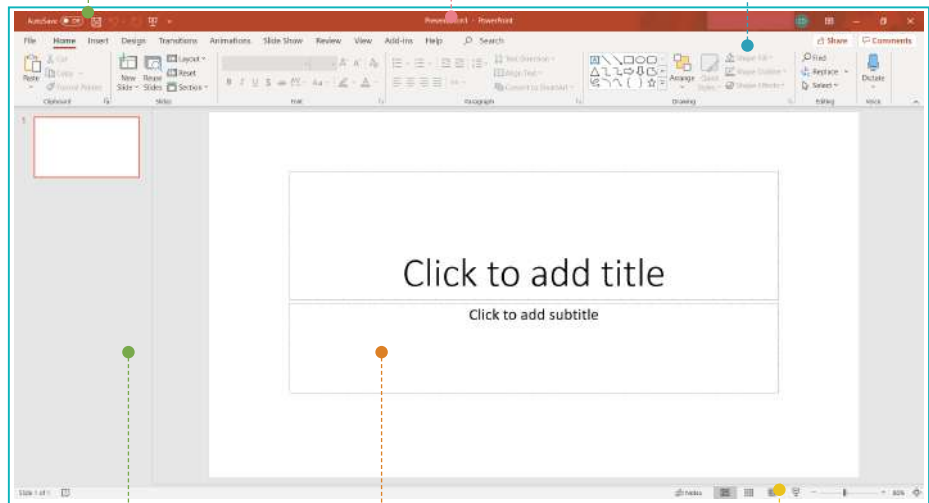

A presentation is a way of communication to get a message across to an audience. A presentation helps us convey our thoughts in a more effective manner. We can add images, videos, and sounds to a presentation to make it attractive.

Activity

Let's help Sanya make an effective presentation about her trip to Riyadh.

Our presentation will include her preparation, journey and the places she visited. This presentation will also help her friends plan a similar trip.

First, we need to decide the flow of the presentation. This helps us organise information to make the presentation meaningful and presentable.

Our slide structure will look like this:

- Slide 1: Title and author
- Slide 2: Summary
- Slide 3: Preparation
- Slide 4: Packing your backpack
- Slide 5: Route
- Slide 6: Places to look for
- Slide 7 and 8: Videos of different places
- Slide 9: Dos and Don'ts

1 Open blank presentation in PowerPoint and add the title and author in first slide

The first slide is generally used to write the title and author of the presentation. We will name this presentation 'My trip to Burj Khalifa'.

- Click on the placeholder to type the title.
- Add a short description about the presentation.
- Add the author's name.

To make the presentation look attractive, use different fonts, font sizes, and font colours.

- Add related images to make it look better.
- Place the images at different positions to see where they look best.

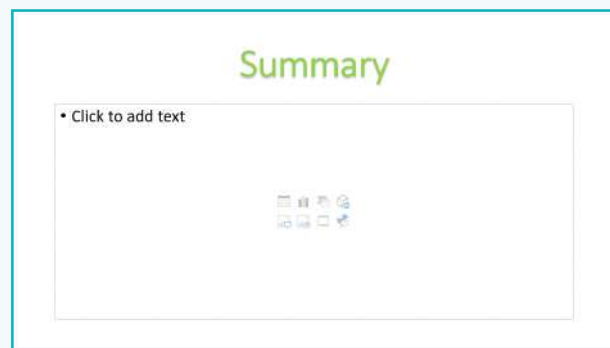

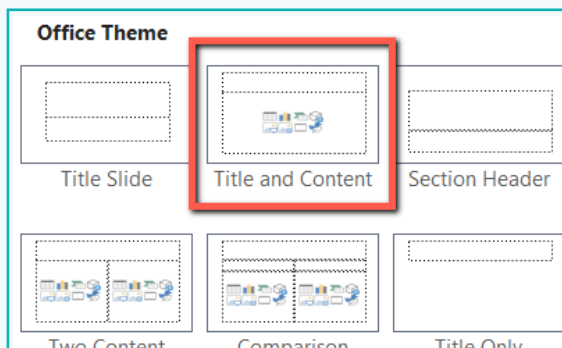

Activity

2 Add a summary on the second slide

A good practice is to add the main points of the presentation at the beginning. These are the summary points for Sanya's trip:

1. Preparation
2. Route
3. Places to visit
4. Dos and Don'ts

- a. To add a summary, click on 'new slide' in the 'Home' tab.
- b. Select 'title and content'.
- c. Add the title 'Summary'. Choose any font and font colour for the title.

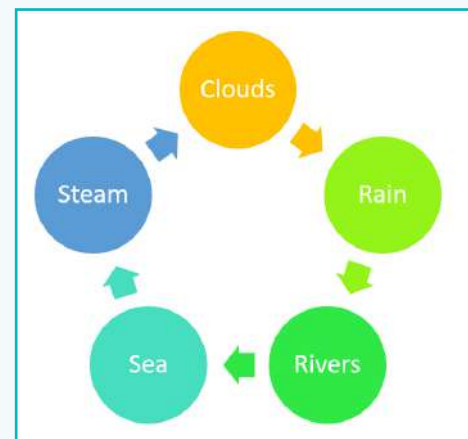

Let's use **SmartArt** to create an easy to read and attractive summary.

SmartArt: SmartArt is a visual representation of information and ideas which uses various shapes. We do not have to draw and colour shapes. It can be used to:

- Show different steps or stages involved in a process.
- List information.

For example: To explain the water cycle, we can use a 'cycle' SmartArt.

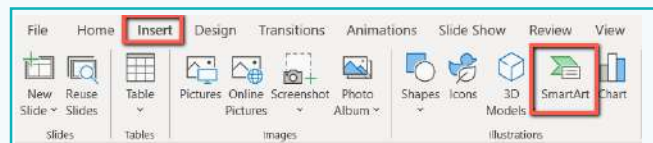

Activity

Based on the type of information, there are different categories of SmartArt we can choose from.

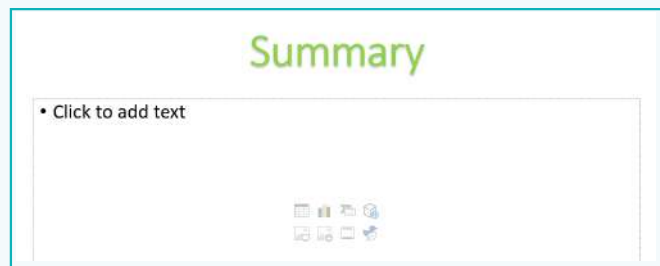

For example: For information where the order does not matter, we use 'list'. To show steps in a process, we use 'Process', and so-on.

To add the summary:

d. Click on 'SmartArt' in the 'Insert' tab.

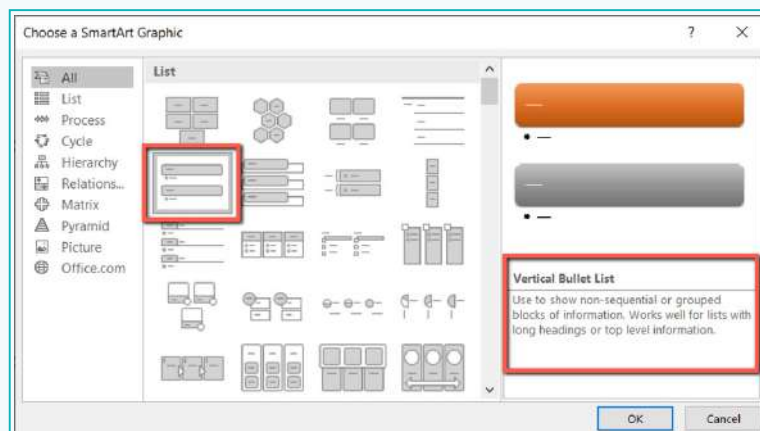

e. We can also click on the 'SmartArt' symbol in the content area.

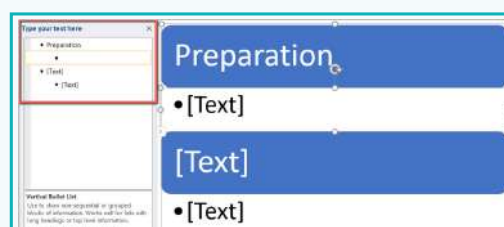

A window with multiple SmartArt graphics will appear. Instead of regular bullet points, we can use a colourful SmartArt to display the summary.

f. Select 'Vertical Bullet List'.

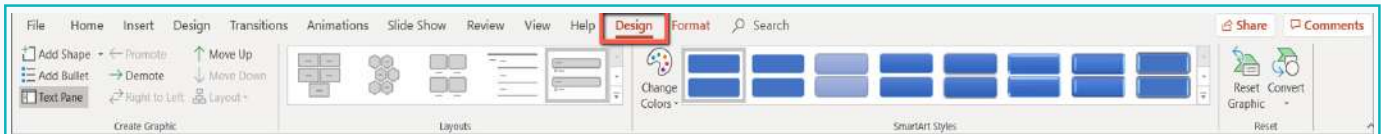

g. Edit text in the 'type your text here' column to add bullet points for the summary.

Since there are no subpoints, use backspace to remove them. And add the other points to complete the summary.

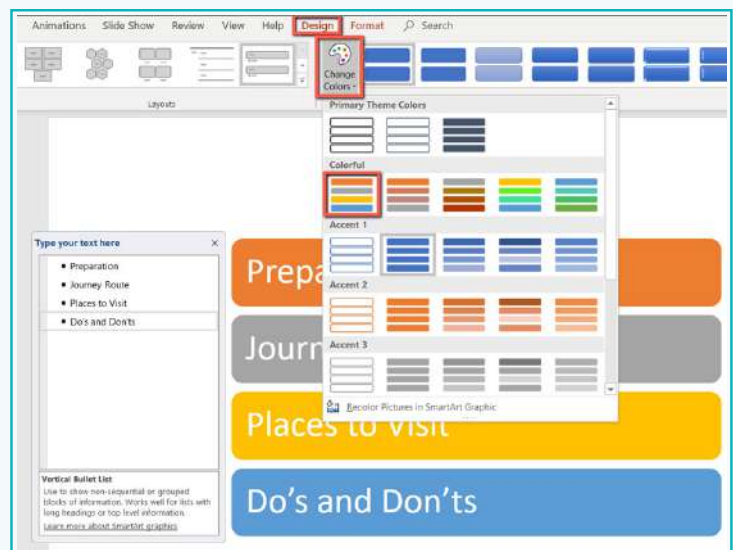

Activity

We can also change the colours of our list to make it bright and attractive. The design pane in the ribbon has options to edit and modify SmartArt.

- h. Click on 'change colours' to choose a colour for the SmartArt.

When we prepare for a trip, we first talk to our parents, decide the dates and places to visit, and talk to friends for suggestions. Then we book hotels and pack our bags. Let's write these preparation steps on our next slide!

3 Add the preparation steps

For the 'Preparation' slide, we will use a regular bullet list.

Preparation

- Discuss your parents about the trip
- Plan your vacation
- Talk to your friends for suggestions
- Pack your backpack and be ready to have fun!

Let's create a slide to discuss what goes in a backpack as we prepare for this trip. We will use SmartArt to make the slide easy to read.

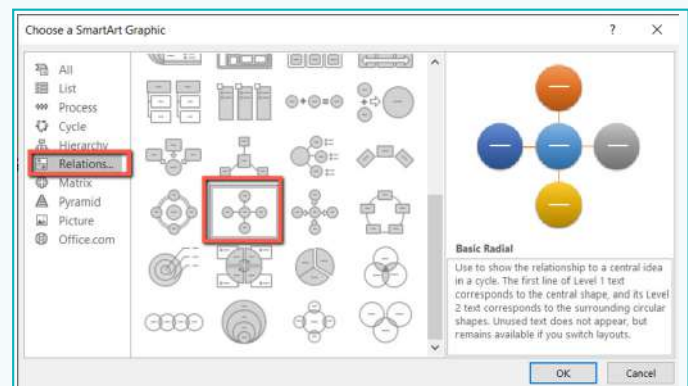

Activity

4 Add SmartArt to show how to pack the backpack

Since everything will be in the backpack, we will use SmartArt that links multiple items to the main one. The backpack will be at the centre.

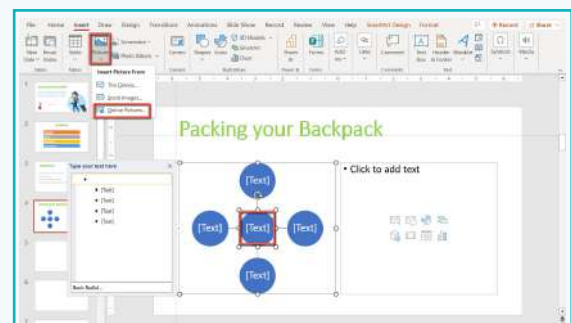

- Create a new slide with the theme 'two content'.
- Add the title 'Packing your backpack'.

- Add SmartArt 'Basic Radial' from the relationship format category.

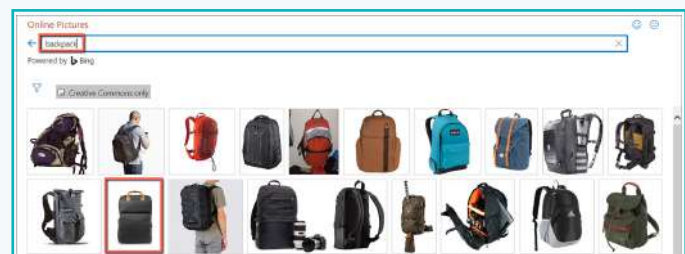

We can add an image of a backpack at the centre of this SmartArt, instead of text.

- To add a picture, take the placeholder to the central circle and click on 'Online pictures' in the 'Insert' tab.

- Search for 'backpack' and select one of your choice.

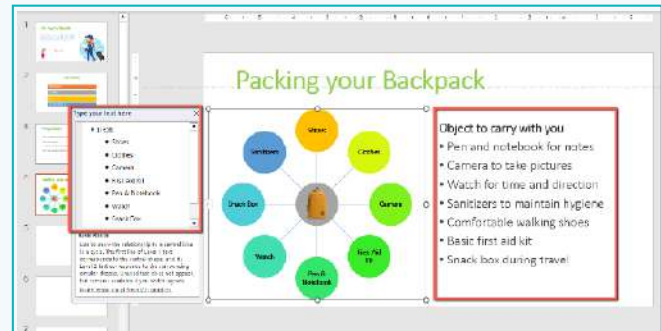

Note:

If the image doesn't automatically appear in the circle, cut and paste it inside the central circle.

Activity

f. Select the SmartArt and change colours from the 'Design' tab.

g. In SmartArt, add names of all the objects to be packed.

We can include the importance of each item so we don't have to remember everything.

Once all the preparation is done, we should choose a route for our trip. This includes the starting point and the destinations we want to visit.

Exercise

State whether True or False

1 SmartArt is used to present large information in a short and effective manner with various shapes.

▲ _____

2 To add a SmartArt the user has to draw shapes and colour them.

▲ _____

3 Once SmartArt is used, it can be edited and modified to a different layout in the design tab.

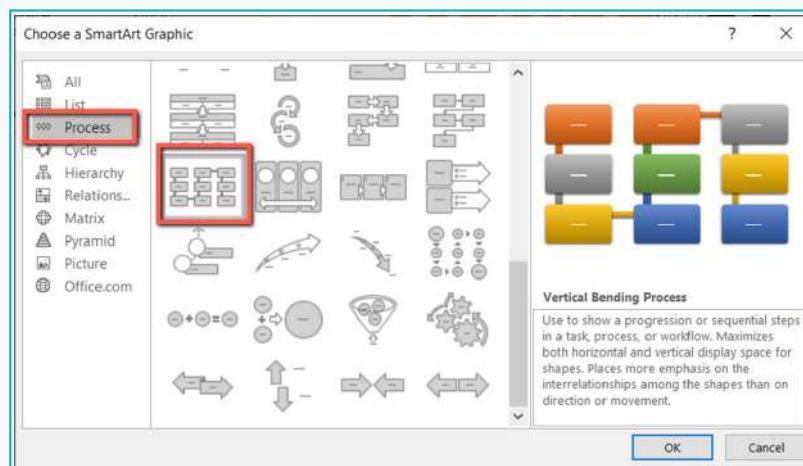

▲ _____

Activity

Let's design the next slide to show the route to our destination.

5 Add SmartArt to show the route

A route shows us a path from one place to another. They're connected to each other and direct us to the next destination. To show the travelling path, we can use the SmartArt 'Vertical Bending Process'.

We know that pictures make slides more appealing. We can add a background image of the map.

If someone wants to know the detailed route, we can show an actual map. For this, we will use a hyperlink to a website that shows maps.

Activity

Hyperlink: A Hyperlink is a feature that links text or an image to another part within the same document or to a different application.

When a hyperlink is clicked, the application takes the user to one these options:

1. A specific place like some text or a picture in the document.
2. Graphics, files, sounds, and other files on the computer
3. Online options like websites and emails.

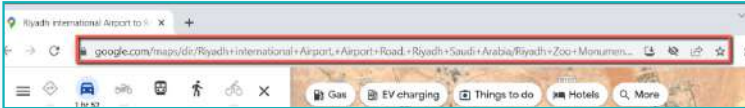

For example: We can use an image a map symbol and link it to a webpage showing information about the Riyadh trip.

To add a hyperlink:

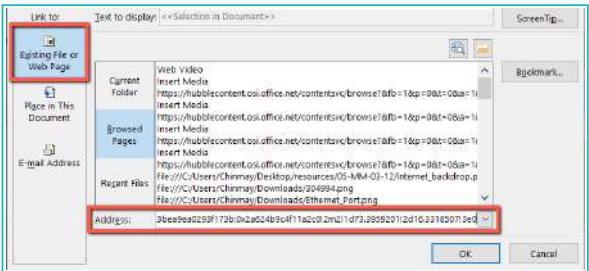

- a. Select and right click on the object to be linked, in this case an image.
- b. Click on the link option from the dropdown menu.

- c.** Copy the web link of the page that shows the route map.

- d. Select the option 'Existing file or webpage'.
- e. Paste the copied link in the 'Address' window and click on 'OK'.

Activity

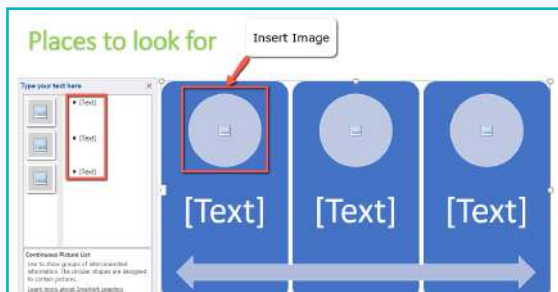

During the slide show if we click on the map symbol, it will take us to the webpage that shows the trip route.

When we go on a trip, we should know the route. More importantly, we should know all the amazing places to visit after we reach our destination. We can use pictures and SmartArt to display them.

We will use 'continuous picture list' SmartArt where we can use images taken during the trip.

6 Add SmartArt to show places to visit

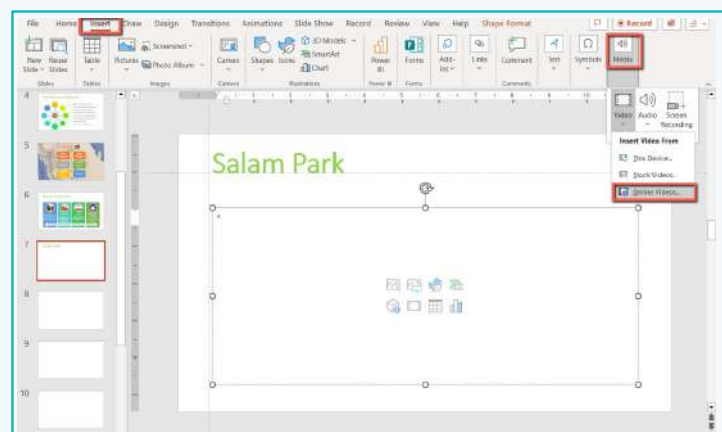

- Add SmartArt 'continuous picture list'.
- Insert pictures in the image areas.
- Insert text for the different places.
- Colours can be changed to suit the presentation's colour theme.

Sometimes a video can give us more information than text. We can add online videos to the slide.

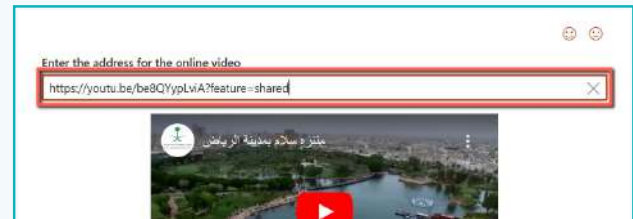

7 Add videos to show places to visit in the next two slides

- Add a title to the slide.
- Click on 'Video' in 'the Insert' tab. From the dropdown, select online video.

Activity

- c. Copy the video link and paste in the window.

If we have the video file on the computer, we can upload the video to show on the slide. We can share a video of Zoo that was taken during the trip.

- d. Click on 'Video' in the 'Insert' tab and select the video stored in the computer.
e. Select the video file and resize the window to fit the slide.

Note: This may take some time depending upon the file size of the video.

Riyadh Zoo Monument

There are some things we should and should not do when we're on a trip. They help us stay safe and enjoy ourselves responsibly. Let's add a slide to explain them.

8 Add SmartArt to write the Dos and Don'ts

We will use 'Lined List' from SmartArt for the Dos and Don'ts.

Do's and Don'ts

Do's	Drink enough water
	Carry lemon water
	Watch your bags
	Learn as much as possible about various places
Don'ts	Don't try risky adventures
	Don't disobey your parents
	Don't take your hands out of windows
	Don't go deep in water

Activity

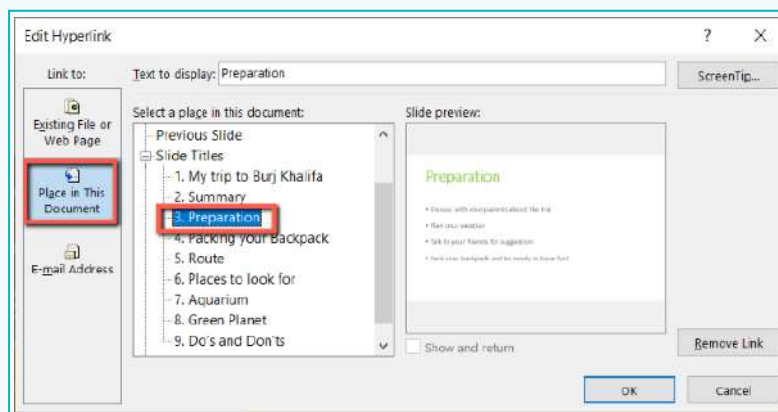

Our presentation is almost complete!

After the presentation, if we want to go back to a specific slide, we have to scroll all the way down. But if we use hyperlinks in the 'Summary' slide, the computer can directly take us to the slide we want.

We can link the points in the 'Summary' slide with their slides.

For example: If we click on 'preparation' in the summary, it will take us to the preparation slide.

- Select the first point in Summary and right click on it.
- From the dropdown, click on link. Select 'place in this document'.
- From the list, select the slide to link and click OK.

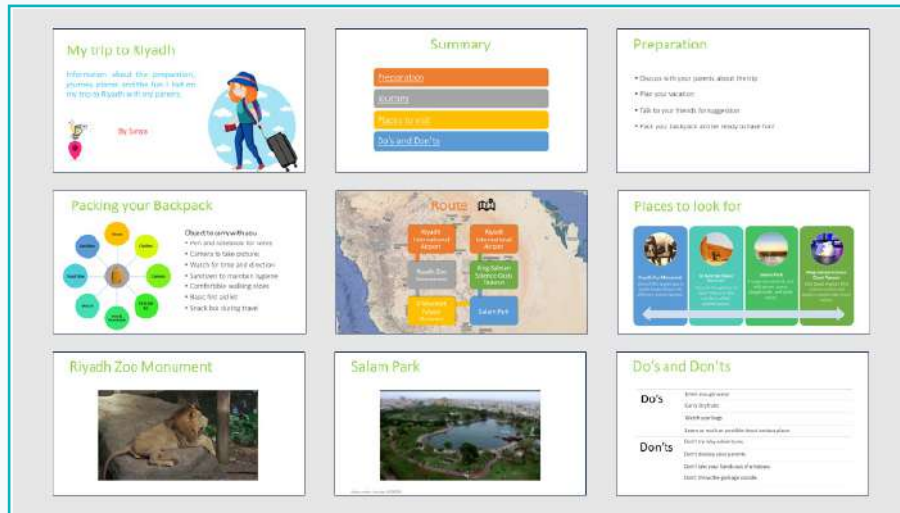

Similarly, links can be added for all the points in the summary. When the topic is clicked, it takes us to the linked slide.

- A text with link is always coloured blue and underlined to indicate the hyperlink. We can change the text colour to suit the background.

Activity

We have created an easy to read and eye-catching presentation of Sanya's trip to Riyadh.

Exercise

Tick mark ☒ the correct answer

- 4 Under which tab is the change colours option for SmartArt?

a. Home ☐	b. Design ☐
c. Insert ☐	d. Review ☐
- 5 Which of the following can be linked using a hyperlink?

a. Webpage ☐	b. A file on PC ☐
c. A slide in the presentation ☐	d. All of the above ☐
- 6 Which of the following is not a SmartArt category in power point?

a. Process ☐	b. List ☐
c. Pyramid ☐	d. Triangle ☐

9. SmartArt and Hyperlinks

A presentation becomes much more interesting with SmartArt and Hyperlink. SmartArt lets us make a quick visual representation of information. We can choose from different layouts, depending on the type of information. Hyperlink creates a link to directly take us to a specific place. It can either be in the same presentation, or on a webpage, or a location on the computer. These features make a presentation attractive and easy to understand.

Tech Flash

- **Presentation** : It is a way of communication to get a message across to an audience.
- **SmartArt** : It is a visual representation of information and ideas using various shapes. It can be used to show different steps or stages involved in a process or to list information.
- **Hyperlink** : Hyperlink creates a link to directly take us to a specific place in the presentation, or to a webpage, graphics, files, sounds, e-mail, and other locations.
