

Need of Computers

Come here Sara, look at what I have brought for you.

Wow, a Laptop... What can we use this for?

We can use computers to study, play games, find information and so much more.

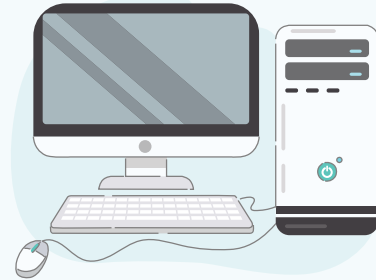

That's so cool!

Computers around us:

Desktop Computers:

These types of computers have separate parts. They are kept on desks or tables. These computers are difficult to move and carry around.

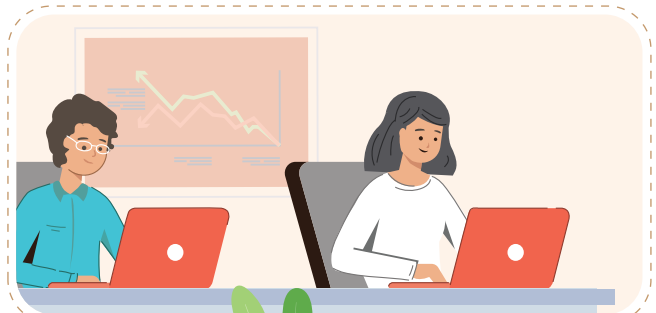

- Desktop computers are used in hotels, hospitals, offices, railway stations and airports.
- In these spaces, computers are kept in one place. They are not moved around.

Laptop:

Laptop computers are smaller in size. These can be easily carried anywhere. They do not need to be kept in one place. All the parts of a computer are put together into a laptop. A laptop does not need a desk to be used.

- Laptops are used by people who work from different places.
- Laptops are used when available space is less.
- They are used in homes, small offices and while travelling.

Bytes

A Computer is a machine that can store **information**. It uses this information to do tasks. This information is of different kinds. It can be made up of words, numbers, **images** and **videos**.

Tablets:

These types of computers are smaller than a laptop. They are almost the size of our school notebooks. Tablets are light weight and easier to carry everywhere.

- Tablets are used for simple and fun tasks.
- They are used to watch videos, play games and click pictures.
- We can search for information and read books using tablets.

Smartphones:

Smartphones are mobile phones which can do some functions of computers. They are used to make calls and use the **internet**. Smartphones are smaller than tablets. They can fit into pockets.

- Smartphones do the work of a mobile phone and computer.
- They can be used to click pictures and search for information.
- Smartphones can be used to look at maps and play games.
- They can be used to send emails.

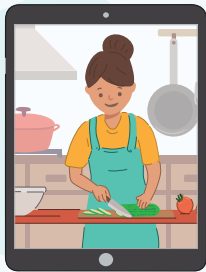

Bytes

Internet is a connection between computers. Computers can share information using the internet. Different types of **devices** can use the internet.

We will see different parts of a computer in the lesson "Parts of Computers"

Exercise

1 Write the correct names of the following devices.

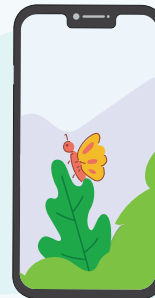

a

b

c

d

One computer can be used to do many different tasks. We do not need to use different devices. In this way, computers can also save space in our homes.

Computer can do some tasks like:

- Playing music
- Playing videos
- Taking pictures
- Letting us write using the keyboard
- Calculating numbers

Computers can also do many more tasks.

Bytes

Data is information that is stored and used for doing tasks. It can be of different forms. Data can be words, numbers, pictures, videos or sounds.

Exercise

2 Tick mark ☒ on the activity that can be done on a computer.

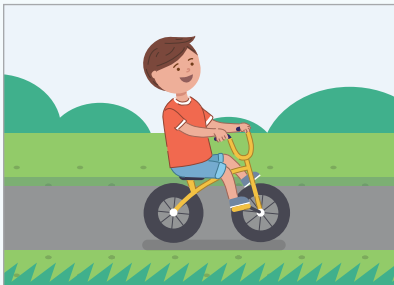

a. ☐ Make videos

b. ☐ Cook Food

b. ☐ Make Drawings

d. ☐ Ride Cycle

e. ☐ Listen to Music

f. ☐ Wash Clothes

There are many reasons to use computer.

- Computers can work faster than us
- Computers do not make mistakes
- Computers do not get tired after work
- Computers can save a lot of data
- Work can be completed in less time with computers

Exercise

 **Fill in the blanks.**

- 3 _____ is a device that helps us watch movies, play games, and save images.
- 4 The type of computer we can carry anywhere is a _____
- 5 Computers talk with each other over a network. This network is called as _____

That's right, Sara. Let's learn about the parts of a computer.

Thank you Papa, for telling me about the types of computers. But our school Computers have many other parts.

Tech Flash

- 1. Device** : A device is a machine that completes a given task.
- 2. Information** : Anything that we see, read or listen on a computer is information.
- 3. Internet** : Internet is a system of connected computers that can share information with each other
- 4. Image** : An Image is a photo file on a computer.
- 5. Video** : The continuous display of moving images is called as video.

Future Tech

Dynamic Desktop

A dynamic desktop is a computer of the future. In this computer, everything is touchscreen. This includes the desk. It can identify the items that we place on it. This is known as 6th Sense Technology.
