

The mouse is an input device. We use it to give instructions to the computer.

Parts of the mouse :

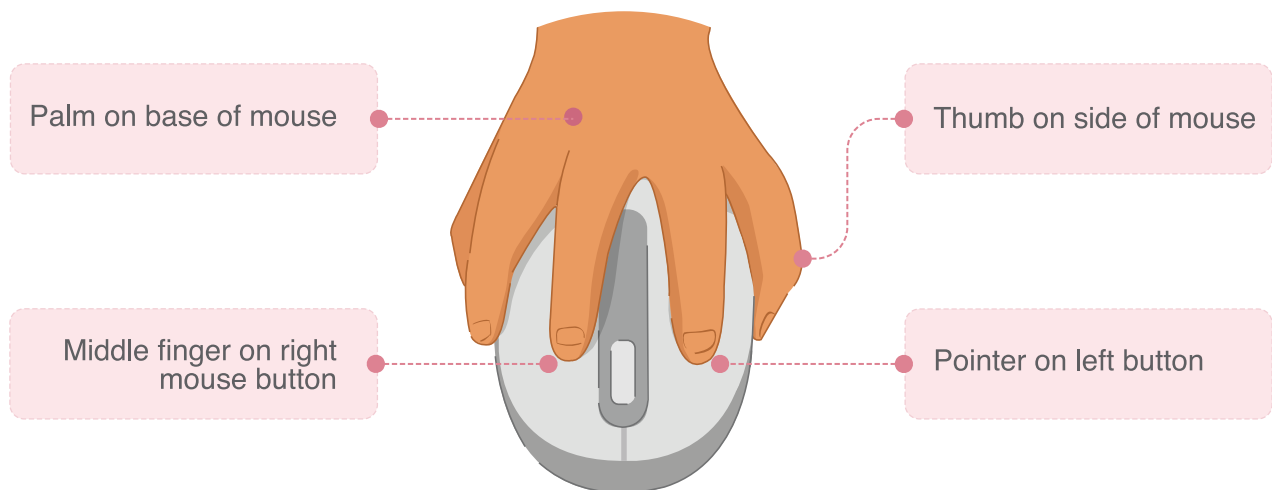

3. Click with Mouse

We use the mouse to point out things on a computer. we can see where the mouse is on the monitor screen with the arrow or cursor.

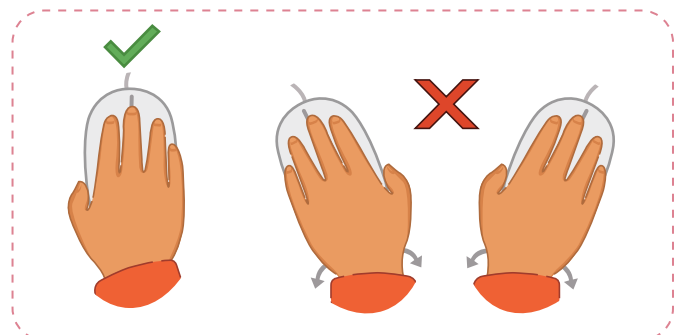

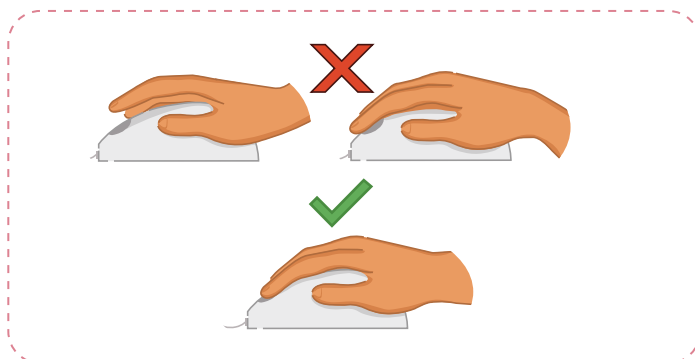

Healthy Practices:

Finger Position :

Hand and arm positioning :

- Keep the mouse close to you. It should feel comfortable and not hurt your hand.
- Keep your arm and shoulder in one line.

- Hold the mouse gently. If you hold it tightly, it can injure your hand.
- Do not keep your wrist and arm on the mouse.
- Move your arm from your elbow while using a mouse.

Exercise

Fill in the blanks

- 1 A mouse has two buttons _____ and _____
- 2 There is a wheel at centre of the mouse. It is called as _____
- 3 The mouse gives instructions to the computer. It is an _____ device.

Tick mark ☒ the correct answer

- 4 Which animal looks like a mouse?

▲ a. Cat ☐ b. Rat ☐ c. Dog ☐

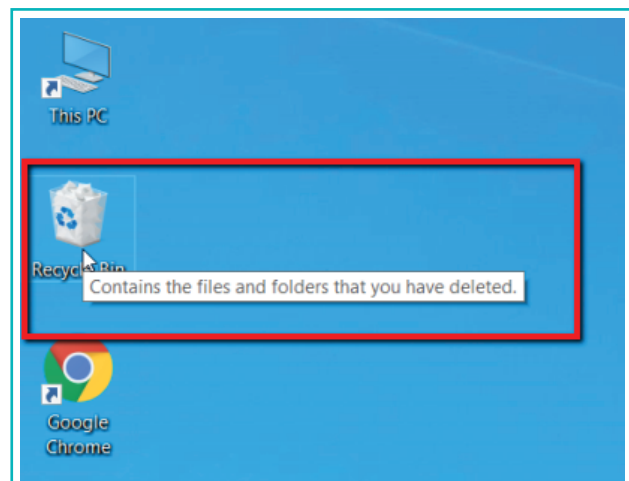

The Pointer

The white arrow on the screen is called a Pointer. We use the mouse to move the pointer. Sometimes, we see a small, thin, blinking line on the screen. This is the cursor.

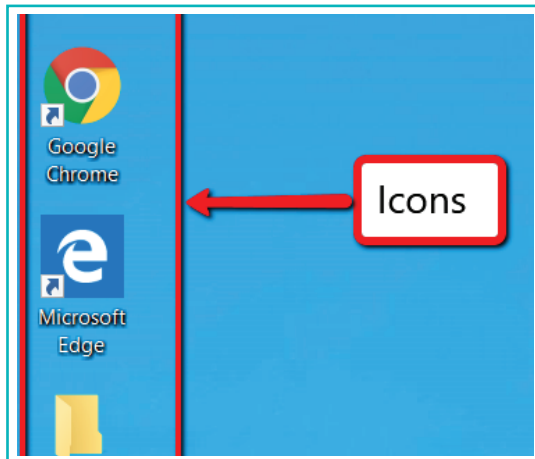

A Mouse is used for the following actions:

Hover:

Moving the pointer over an object on the screen is hovering. When we hover over an icon, we have not clicked on anything. When a mouse pointer hovers on an icon, the icon glows. It shows information about that icon in one line.

3. Click with Mouse

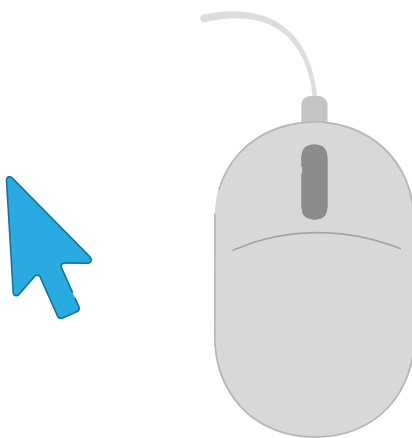

Icon :

Icons are small images we see on the monitor screen. They show us the names of files, folders and programs.

Let us look at what the left click button does

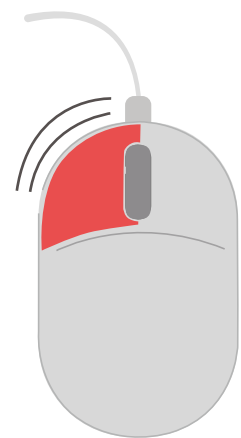

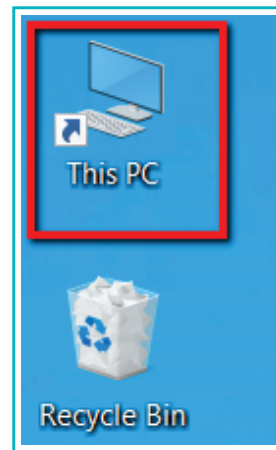

a. Point at objects on the screen

We can point at things on the monitor screen. To do this, we move around the mouse. The pointer moves as the mouse moves.

b. Select objects

To open a file, folder, or a software we have to select it. The left click button selects an object on the screen. The pointer must be on the object or icon we want to select.

Bytes

- A File is a set of information.
- A Folder is a group of files.
- Software is a set of instructions. It tells a computer what to do.

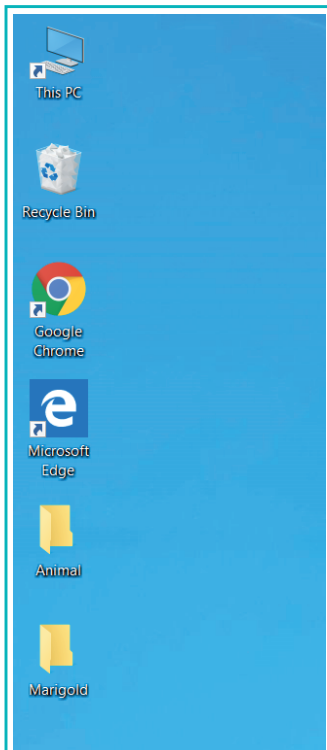

We will see details of files and folders in "Files and Folders".

3. Click with Mouse

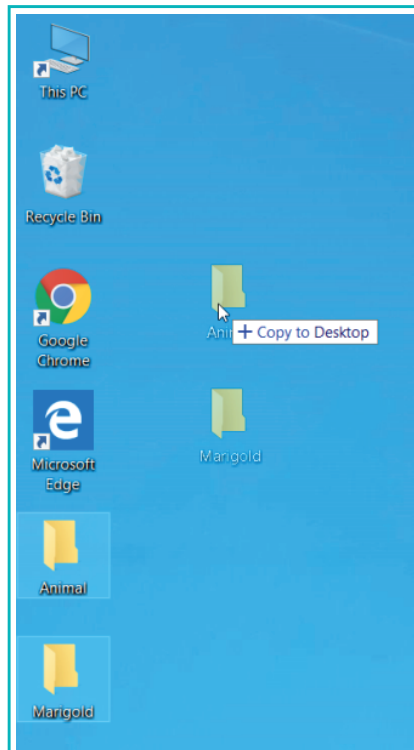

c. Move objects

We can move files or folders on a computer. We can use the left click button to select an object. Then we can move it to another location. This is also called drag and drop.

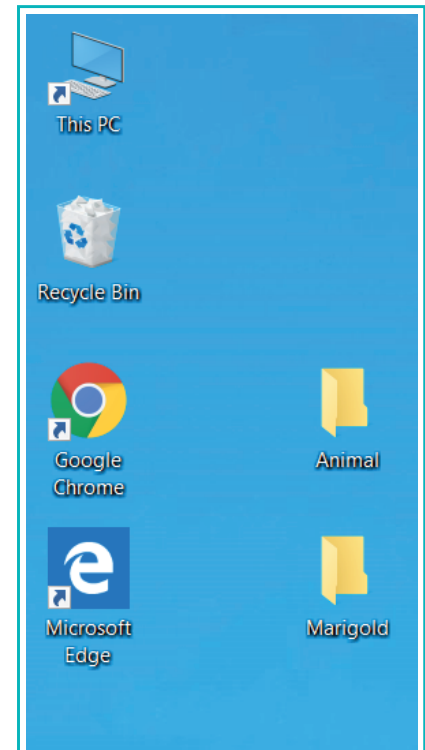

To move an object, follow these steps:

Select the object you want to drag with the left click button

Keep the left click pressed down and Drag the object to the new location

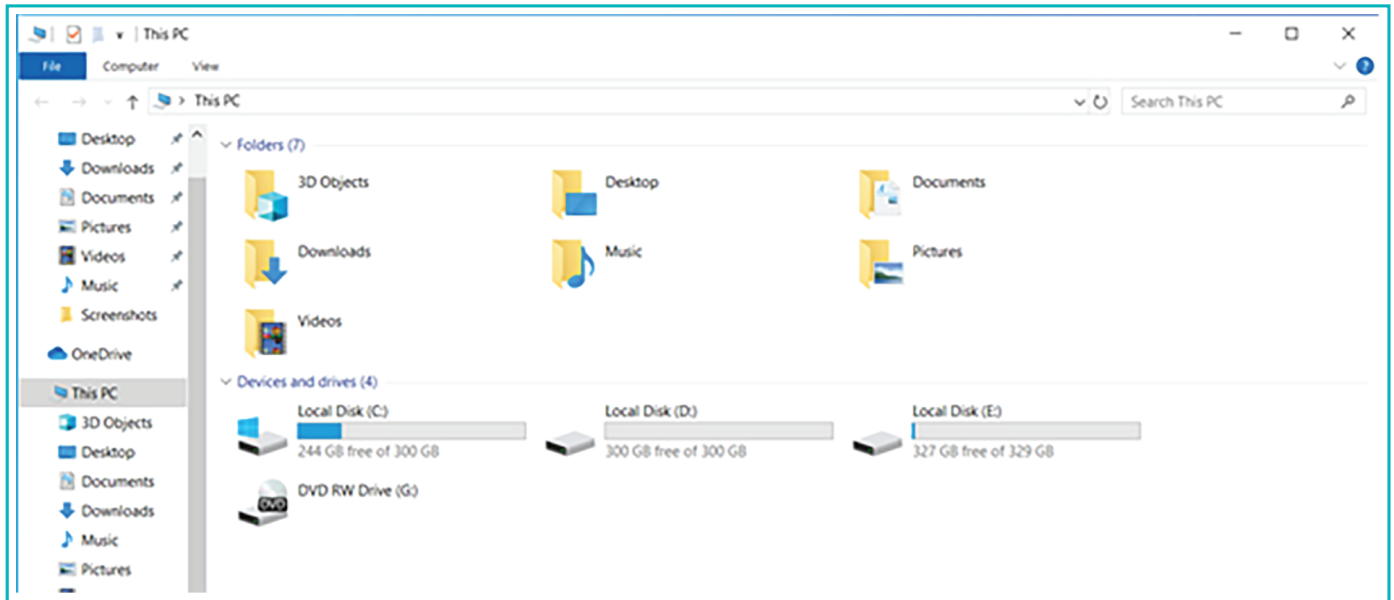

Release the left click

d. Open files, folders or software

We need to open a file to read, write, see or hear data on computer. To open a file, folder or software, follow these steps:

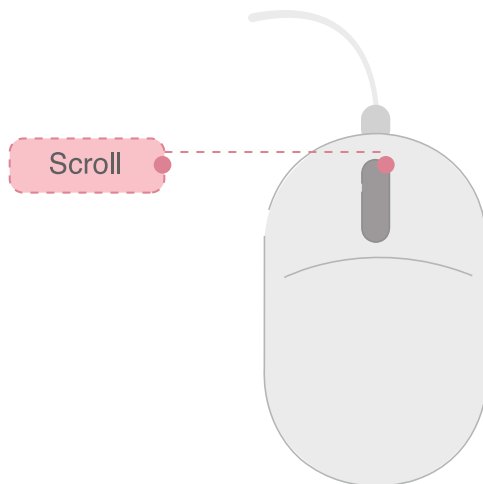

- Select the object you want to open.
- Click the left button of the mouse two times (double click). This will open the selected object.

3. Click with Mouse

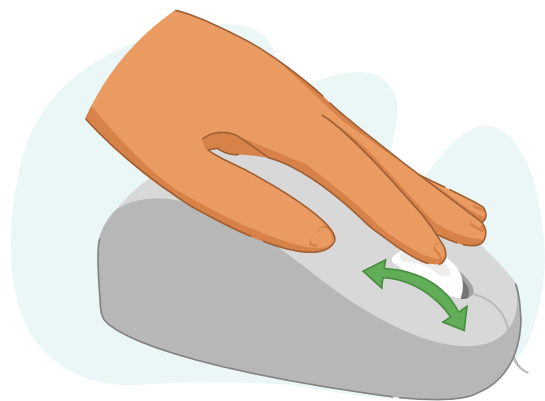

Let us look at what the scroll wheel does

In the center of the mouse you will see a wheel. This is called as the scroll.

The scroll helps in going down or up on the page. To use the scroll, we must move the wheel with one finger. This moves the information on a page so we can see it.

Bytes

- Clicking one time on icon is single click.
- Clicking fast on an icon two times is double click.

Exercise

Fill in the blanks

- 5 Click the left button of the mouse _____ times. This will open the selected object.
- 6 To move a file, we must _____ and _____ the file.
- 7 _____ moves information on a page so we can see it.

Tick mark ☒ the correct answer

- 8 How do we select objects on the screen?

 a. Right Click ☐ b. Left Click ☐ c. Scroll ☐

On a laptop, there is a touchpad. This works just like a mouse. It also has 2 buttons to click with..

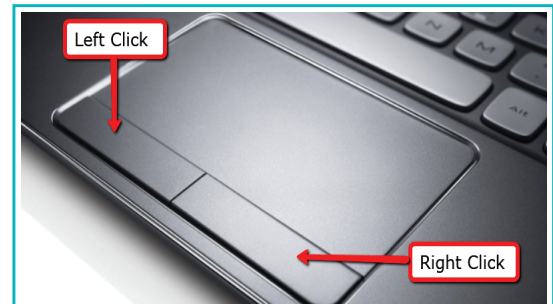

Today in school, we learnt about the mouse. Our teacher showed us everything we can use it for. But where is the mouse for this laptop?

3. Click with Mouse

Touchpad:

A touchpad is a type of mouse. Laptops have touchpads. They do everything that a mouse can do. We have to use the touchpad with our fingers. When we move our finger on the touchpad, the pointer moves on the screen. A touchpad cannot be moved around like a mouse.

Difference between touchpad and mouse :

Touchpad

1. You move finger on the touchpad to move the pointer or cursor.
2. Touchpad does not have a scroll button.
3. Touchpad is a part of the laptop.

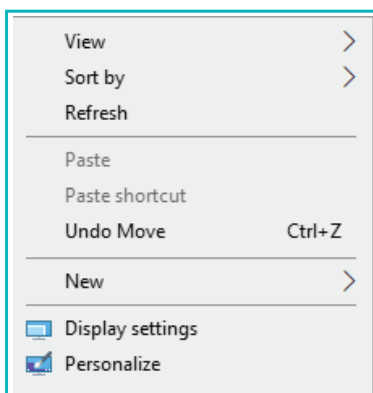

Mouse

1. You move the mouse to move the pointer or cursor.
2. Mouse has a scroll button.
3. Mouse is a separate part of computer.

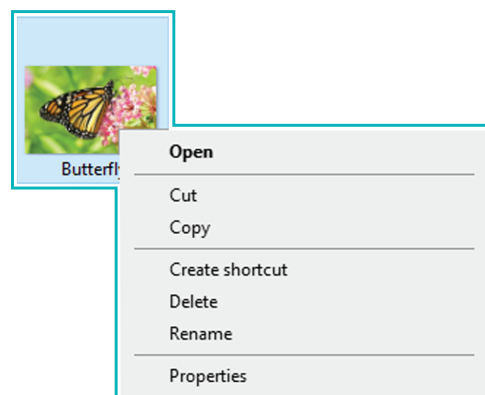

Let us look at what the right click button can do.

Right click is used for specific actions. We can right click on objects to get a menu of options.

- When we right click on the monitor screen this is what we can see:

- When we right click on a file, this is what we can see:

We will learn more about right click in future.

Activity

Try to drag and drop a file from one folder to another.

Safety measures:

- A Mouse can get sticky if we do not clean it. Dust and dirt sticks on mouse. When this happens, the mouse does not move properly.

- Clean the mouse with a dry cloth

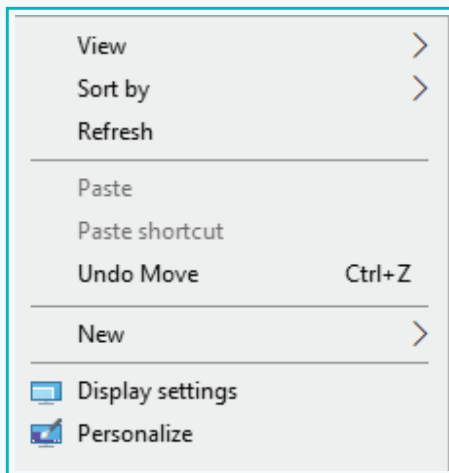

- Do not look directly into the light at the bottom. It might hurt your eyes.

Exercise

True or false

- 9 When we right click anywhere on the monitor screen, this is what we can see : _____

- 10 Always clean the mouse using wet cloth : _____

Match the Following:

- 11
- | | |
|--------------------------------------|----------------------|
| a. Select a File | f. Drag and Drop |
| b. To move a file or folder | g. Double Click |
| c. To open a file or folder | h. Single Left Click |
| d. To see options for a file | i. Hover |
| e. To see file or folder description | j. Right Click |
- 

3. Click with Mouse

Well done Sara! You will learn how to write on a computer soon.

Now, I can use a mouse and a touchpad. I want to know how to write on a computer.

Tech Flash

Touchpad : The rectangle area on a laptop. It works like a mouse.

Pointer : Pointer is the arrow that we see on the screen. The mouse controls the pointer.

Cursor : A blinking small, straight line on the screen.

Icon : Icons are small images we see on the screen. Each file, folder and software has an icon.

Hover : Hover is the action when we move the pointer over an icon.

File : File is the form in which a computer stores information.

Folder : Folder is like a group of files. It is like a box which we use to store files.

Future Tech

Gesture Control

In future, computers and smart devices will be operated simply by using hand gestures.
