

Type with Keyboard

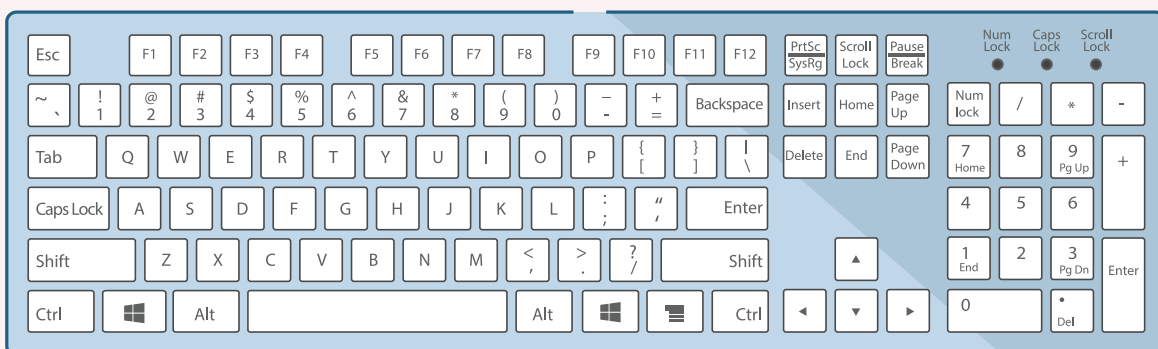

04

Good question, Sara. They all have different functions. Let's see how to use them.

There are so many buttons on the keyboard! I know these letters are. But what are all of these other buttons?

A Keyboard is an input device. It allows a person to enter letters, numbers and symbols into the computer.

4. Type with Keyboard

Layout of a keyboard: A Keyboard has many buttons called **Keys**. Keys are of different types.

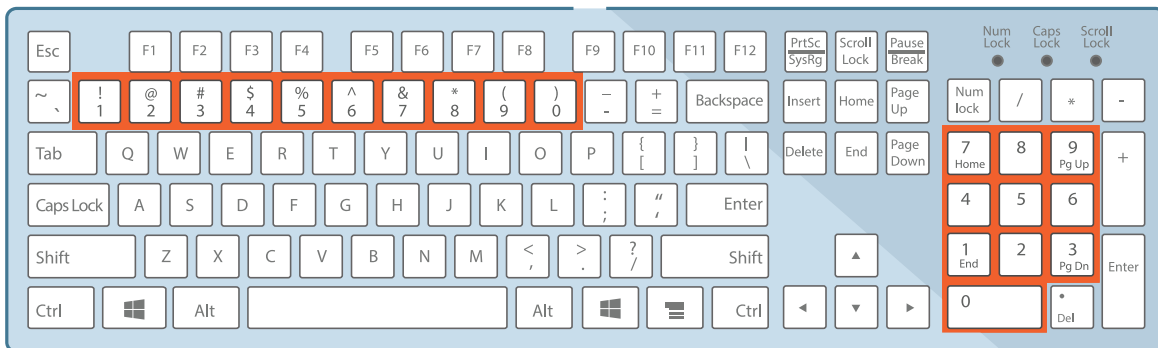

1. Alphabet Keys

These keys have the letters of the alphabet on them. There are 26 alphabet keys on a keyboard.

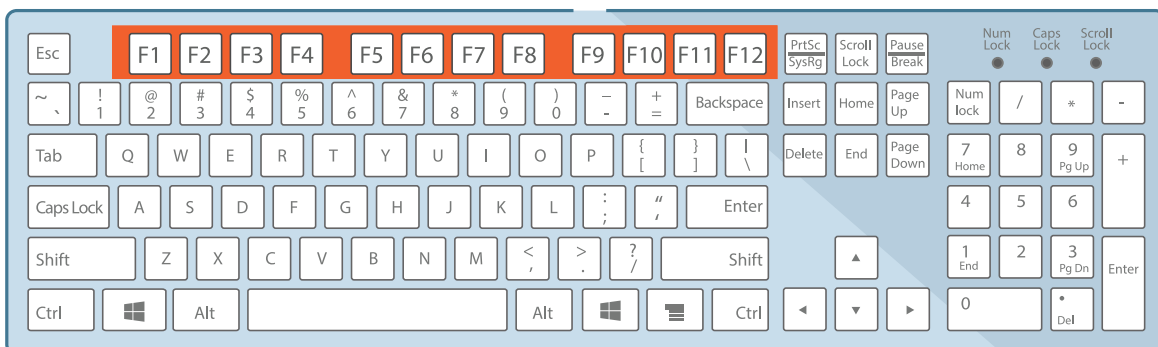

2. Number Keys

These keys which have numbers on them. There are two sets of number keys. One set is on top of the alphabet keys. The other set is on the right side of the keyboard.

3. Function Keys

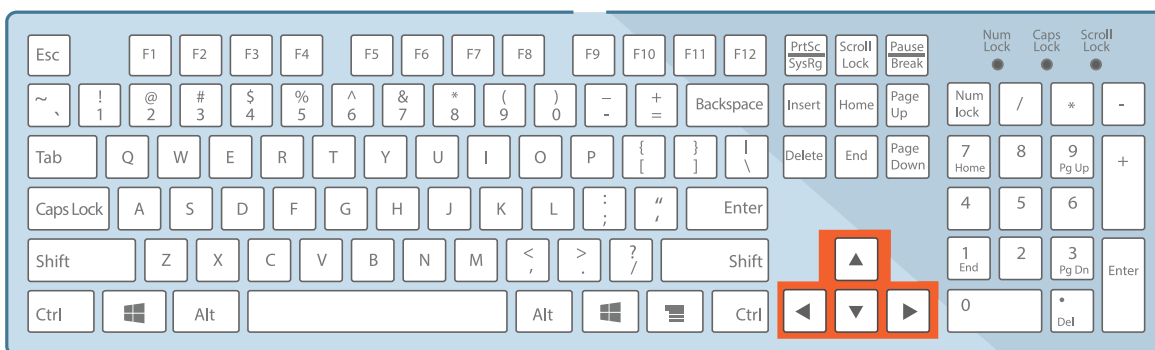

The functions keys are special keys. They are used for specific actions. For Example: changing the brightness of the computer screen. There are 12 function keys on a keyboard. They are marked from F1 to F12. They are all used for different actions.

4. Type with Keyboard

4. Arrow Keys

The arrow keys are used to move the cursor. There are four arrow keys: up, down, right, and left. Arrow keys can also be used to select objects. We can select icons of files, folders and programs. When we press the arrow keys, the selection moves.

Exercise

Multiple choice question

4. Type with Keyboard

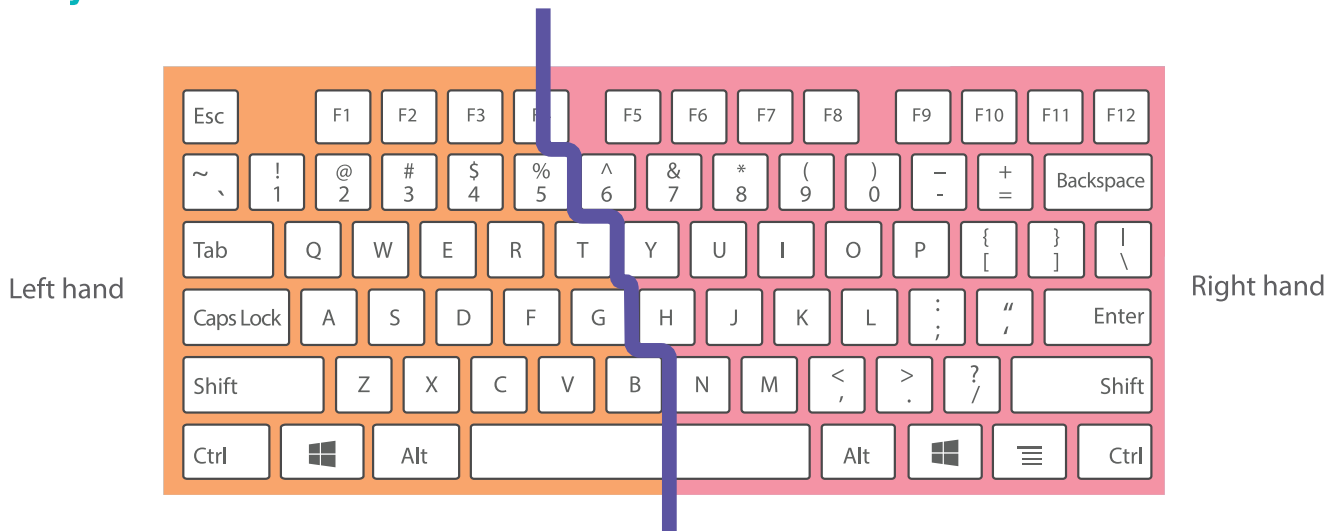

Exercise

5 Name the type of the keys shown in red boxes.

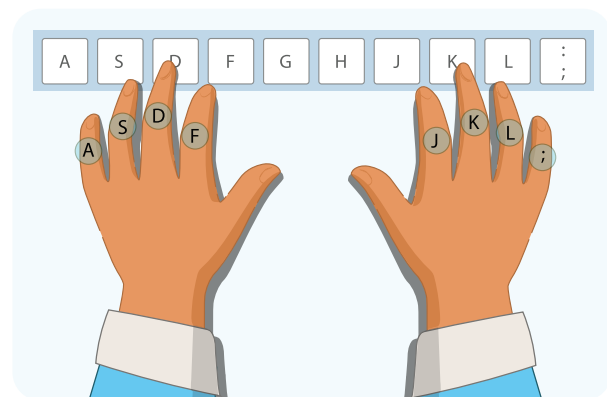

- Alphabets
- Spacebar
- Caps lock
- Number keys

Healthy Practices:

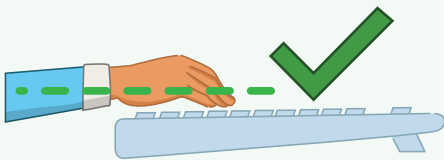

- Keep the mouse and keyboard at elbow height.
- Position your keyboard properly. You should comfortably reach the top row of keys.
- Rest your hands and wrists when you finish typing.
- Use both hands to type. Keep your fingers as shown below.

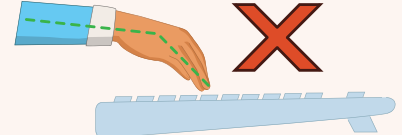

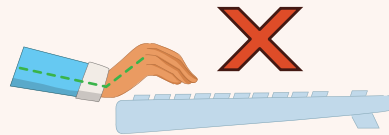

4. Type with Keyboard

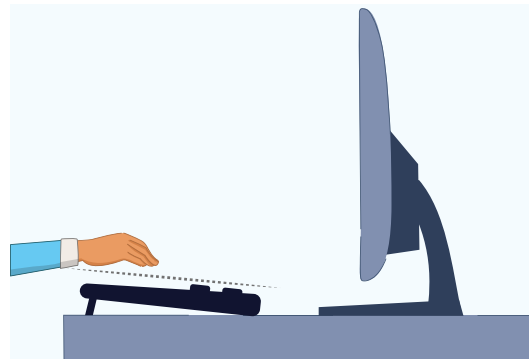

Right

Wrong

The keyboard should be tilted backward while using. This helps prevent injuries. Otherwise, there should not be any tilt to the keyboard.

Keep the keyboard on the computer table. Do not keep the keyboard on your lap while using.

4. Type with Keyboard

Notepad :

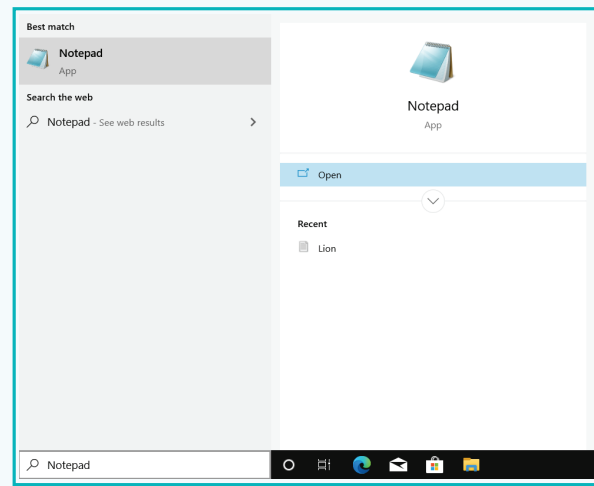

Notepad is a computer program. It is used for writing text.

Activity

Activity Objective: Use of Different Keys

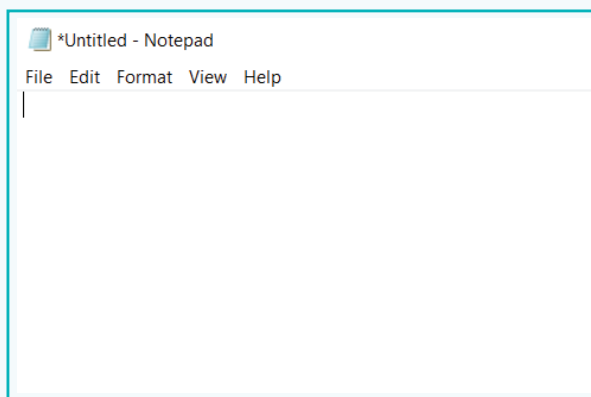

1 To Open Notepad

- Type **Notepad** in search bar

2 In Notepad

a. Press **Caps lock** and then M.

b. Type this sentence using the **Spacebar** between words: 'My name is Raj / Riya.'

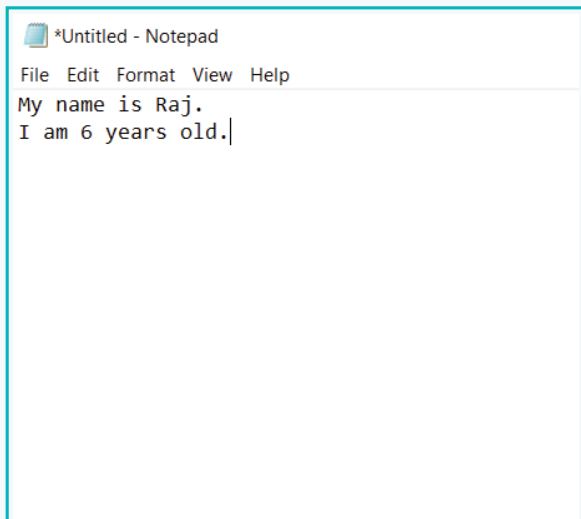

Bytes

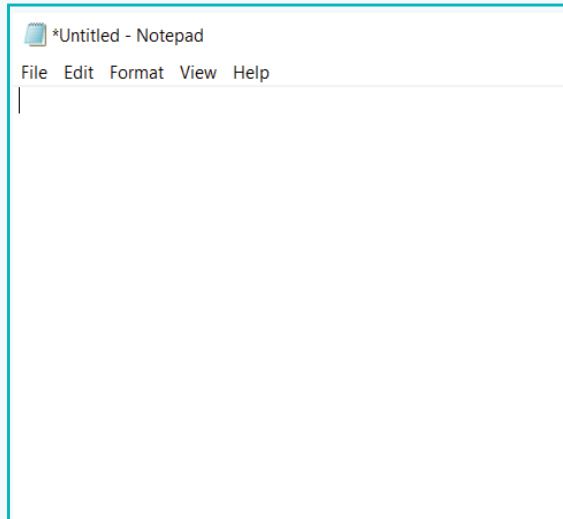

Caps Lock is used to change the case of the text. We can make text capital by switching on the Caps Lock key.

4. Type with Keyboard

- 3 Press **Enter** and Type: I am 6 years old.

- 4 Delete all the sentences using **Backspace**

Types of Keyboard

There are two different types of Keyboards:

Wired Keyboards:

These are connected to the computer using a wire. If the wire is not connected, we cannot use them to type

Wireless Keyboards:

These do not need a wire to connect. They are connected with a different technology. We will learn about this later.

Exercise

Mark True or False

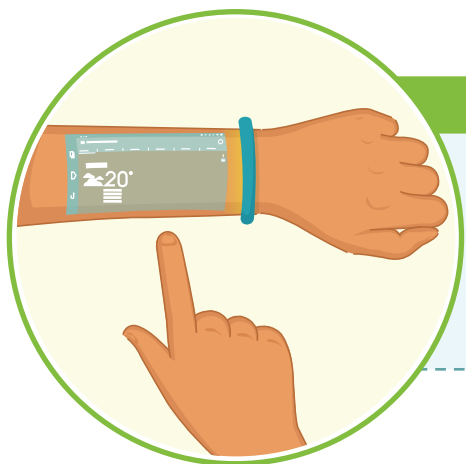

- 6 Space bar is used to change the case of a letter. _____
