

# Tidy Document

Sir, I've written an article for the school magazine. Can you please take a look at it?

Yes, can you show me how?

Nice work, Sejal. The article is good. But why don't you use the tools in Word to make it look better and correct the errors?

In a textbook or magazine, information is organised to grab the reader's attention and make it easy to read. In an effective document, writing space is used well. It contains sentences free of any mistakes. Various tools in Word help us to create meaningful and organised documents.

In this lesson, we will learn to use some of those tools.

Sejal has written an article for her school magazine about the eating habits of different animals.

## Eating habits of animals

### Introduction:

All living things need food to grow and remain healthy. Food gives us energy to work and play. Plants prepare their own food whereas animals and humans depend on plants and other animals for their food. Animals are classified based on their eating habits. It will be interesting to see what kind of food animals eat. This project gives information about eating habits of animals.

### Observation:

Plant eating animals depend on grass, leaves, fruits, and vegetables, for their food.

Plant eating animals do not have sharp teeth.

Flesh eating animals eat flesh of other animals. They hunt other animals for their food.

Flesh eating animals have sharp claws and teeth.

Some animals eat both plants as well as animals.

### Plant eating animals:

Cow  
Horse  
Goat  
Elephant  
Sheep  
Hippopotamus  
Giraffe

### Flesh eating animals:

Lion  
Tiger  
Hyena  
Cheetah  
Crocodile  
Wolf  
Leopard

### Conclusion:

Animals and plants depend on each other for their food. Each living thing gets food and energy is passed from creature to creature.

### Sources:

Visits to National Park  
Zoos  
Neighbourhoods

Sejal's teacher explained a few tools she could use to visually improve her article to grab the reader's attention.

## Eating habits of animals

### Introduction:

All living things need food to grow and remain healthy. Food gives us energy to work and play. Plants prepare their own food whereas animals and humans depend on plants and other animals for their food. Animals are classified based on their eating habits. It will be interesting to see what kind of food animals eat.

This project gives information about eating habits of animals.

### Observation:

- Plant eating animals depend on grass, leaves, fruits and vegetables for their food.
- Plant eating animals do not have sharp teeth.
- Flesh eating animals eat flesh of other animals. They hunt other animals for their food.
- Flesh eating animals have sharp claws and teeth.
- Some animals eat both plants as well as animals.

| Plant eating animals | Flesh eating animals |
|----------------------|----------------------|
| Cow                  | Lion                 |
| Horse                | Tiger                |
| Goat                 | Hyena                |
| Elephant             | Cheetah              |
| Sheep                | Crocodile            |
| Hippopotamus         | Wolf                 |
| Giraffe              | Leopard              |

### Conclusion:

Animals and plants depend on each other for their food. Each living thing gets food and energy is passed from creature to creature.

# 7. Tidy Document

## Ruler

In a notebook, we can begin to write anywhere on the page. In Word, we have to start at the beginning of the document. We can use the Ruler tool to adjust the writing space. It helps us to align text, tables, graphics, and other elements in our document.

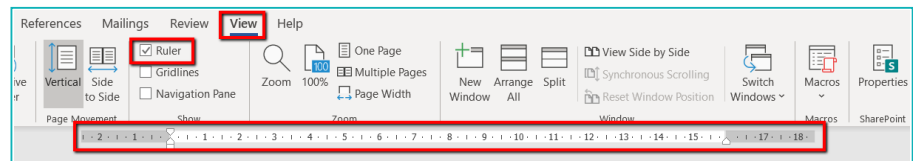

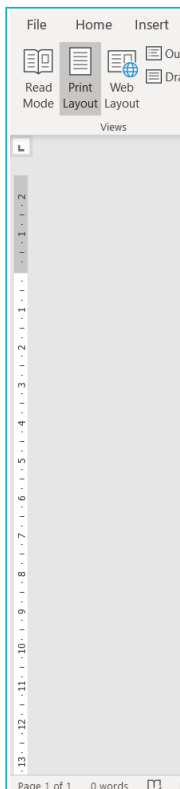

## Select Ruler

- 'View' ribbon → 'Ruler'

## How to use Ruler

- In the 'View' ribbon, select the 'Ruler' checkbox. The rulers will now be visible on the document. There are two rulers: one at the top and one on the left side.

# 7. Tidy Document

A **Margin** is the grey space at the edge of a document. The writing space is in white. Margins are useful in 3 ways:

- A margin helps us define the writing space.
- When a document is printed, the margin space is used for binding. It ensures that text is not too close to the edge of the document.
- A margin can be used to take notes on the side. These are not part of the actual document.

## To set the margin

- Hover over the edge of ruler where the margin begins (Grey–White border).

- A two-sided arrow will appear.
- Use left-click to drag the arrow.

- Release the mouse button to set the margin.

There are horizontal margins as well which can be adjusted on the left-hand side ruler. To adjust, we use the same method as the vertical margin.

## Exercise

**Tick mark ☒ the correct answer**

**1** Which tool helps us find the start and end point of a document's writing space?

- |              |                          |                                        |                          |
|--------------|--------------------------|----------------------------------------|--------------------------|
| a. Alignment | <input type="checkbox"/> | b. Ruler and Margins                   | <input type="checkbox"/> |
| c. Editor    | <input type="checkbox"/> | d. Leave the space at the bottom blank | <input type="checkbox"/> |

# 7. Tidy Document

It's simple to understand information when it is neatly presented. Class timetables, menu cards, result sheets, cricket score cards are some examples. All of these use **tables**.

## Tables

A Table is made up of rows and columns. **Rows** are horizontal sections and **Columns** are vertical sections. Each individual box inside the table is called a **Cell**. It helps us to:

- Neatly present information
- Use less space to display more information
- Sort and label information

**For example:**

| SCHOOL CRICKET CHAMPIONSHIP |                                      |      |       |  |
|-----------------------------|--------------------------------------|------|-------|--|
| Batsman                     | Wicket                               | Runs | Balls |  |
| Akeem                       | b. Salman                            | 121  | 162   |  |
| Hassan                      | c. Saleh                      b. Ali | 12   | 3     |  |
| Kareem                      | Not Out                              | 67   | 99    |  |
| Omar                        | run out Hamza                        | 56   | 89    |  |
| Arbaz                       | Not Out                              | 12   | 16    |  |

| Bowler | Overs | Runs | Maiden | Wickets |
|--------|-------|------|--------|---------|
| Salman | 9.0   | 56   | 0      | 1       |
| Ali    | 14    | 67   | 1      | 1       |
| Asad   | 15    | 45   | 4      | 0       |
| Zeek   | 12    | 45   | 3      | 0       |

Cricket Score Card

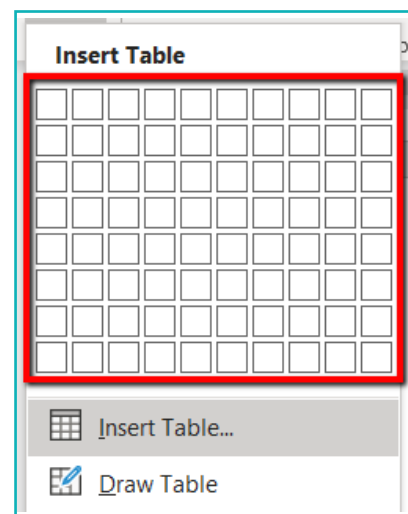

## To add a table

- Insert → Table → Insert Table

There are a few different ways to insert a table:

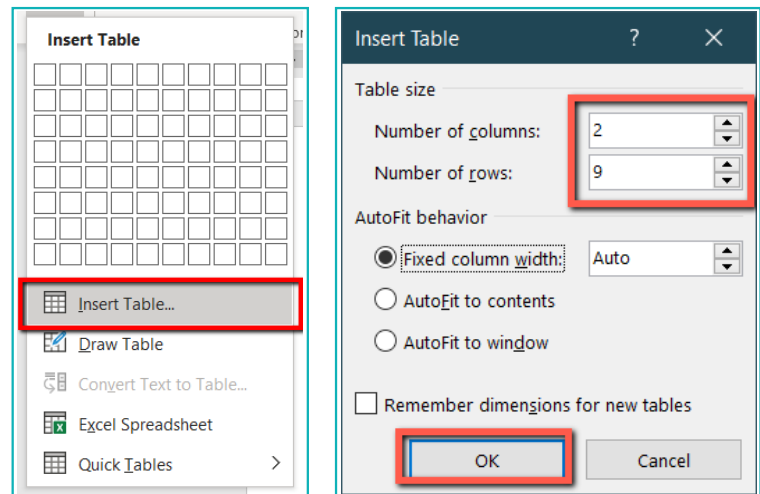

### 1. Drag on cells:

- In the grid in the 'Table' menu, we can drag to select the number of rows and columns we need. If the table size is small, this is the easiest way to insert it in a document.
- After we let go of the mouse button, the table appears.

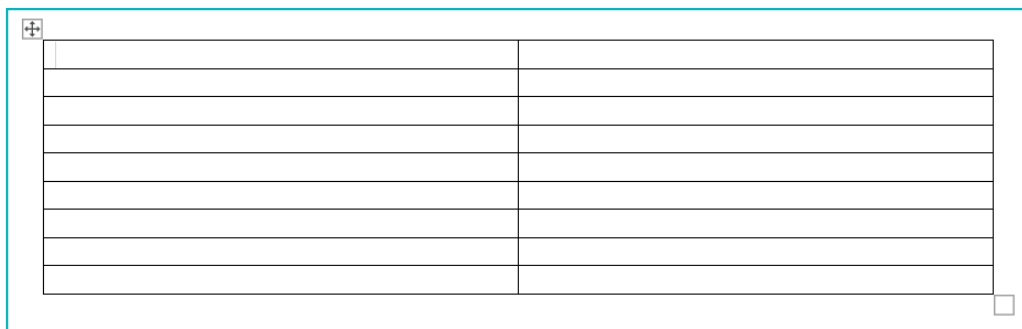

## 2. Insert Table Option:

- This is a manual method to insert a table.
- When we select this option a new dialog box appears. We can manually enter the number of rows and columns here.

- A new table is created.

- We can adjust the size of the table.
- The new 'Table Design' ribbon contains options which become visible when the table is selected.

| Plant eating animals | Flesh eating animals |
|----------------------|----------------------|
| Cow                  | Lion                 |
| Horse                | Tiger                |
| Goat                 | Hyena                |
| Elephant             | Cheetah              |
| Sheep                | Crocodile            |
| Hippopotamus         | Wolf                 |
| Giraffe              | Leopard              |

- Now fill the table with information.

Sejal's document is now well organised. The table makes her information easier to read, and the document is more presentable.

## Exercise

### Fill in the blanks

- 2 A table is made up of \_\_\_\_\_ and \_\_\_\_\_.

### Tick mark ☒ the correct answer

- 3 Which tool helps us to make a cricket score card?

- |          |                          |                          |                          |
|----------|--------------------------|--------------------------|--------------------------|
| a. Ruler | <input type="checkbox"/> | b. Bullets and Numbering | <input type="checkbox"/> |
| c. Table | <input type="checkbox"/> | d. None of these         | <input type="checkbox"/> |

## Bullets and Numbering

Bullet points and Numbered sentences make it easier to arrange information in a document. As compared to a paragraph, lists help us:

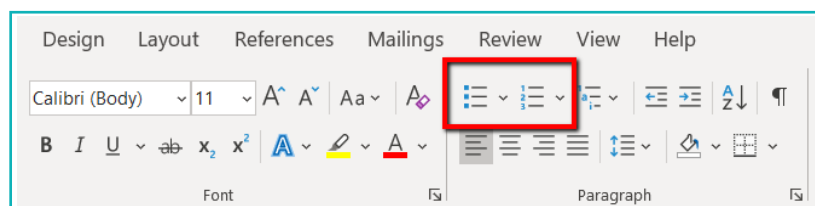

- Understand the flow of information. For example: steps in an experiment.
- Quickly count the number of items.
- Remember tasks to be completed.

Common examples of lists are: questionnaires at the end of a lesson, grocery lists, and receipts. To create lists in Word, we use **Bullets and Numbering**.

Bullets and Numbering can be found on the Home ribbon.

- Home → Bullets
- Home → Numbering

## Bullets

A bulleted list is used when we have several items related to each other, but their order does not matter.

- Click on the **bullet** menu. Different bullet options are available to use.

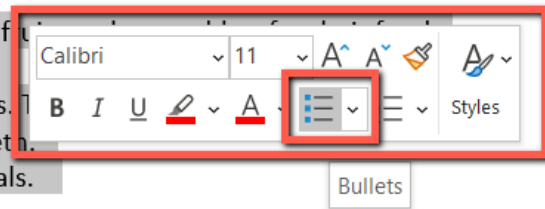

## How to use Bullets

### Method 1:

- List down all the items one below the other.
- Select all the items.

#### Observation:

Plant eating animals depend on grass, leaves, fruits, and vegetables for their food.  
Plant eating animals do not have sharp teeth.  
Flesh eating animals eat flesh of other animals. They hunt other animals for their food.  
Flesh eating animals have sharp claws and teeth.  
Some animals eat both plants as well as animals.

- A menu box will appear with shortcuts.
- Click on 'Bullets'.

#### Observation:

- Plant eating animals depend on grass, leaves, fruits, and vegetables, for their food.
- Plant eating animals do not have sharp teeth.
- Flesh eating animals eat flesh of other animals. They hunt other animals for their food.
- Flesh eating animals have sharp claws and teeth.
- Some animals eat both plants as well as animals.

- We can also click on bullets on the Home ribbon for the same result.

Sejal's document now contains a bulleted list to clearly present her observations.

### Method 2:

- Click on the bullets menu. A dot will appear where the cursor was. This indicates that a bulleted list is created. We can now type the text.
- Press Enter to make a new entry on a new line.

## Numbering

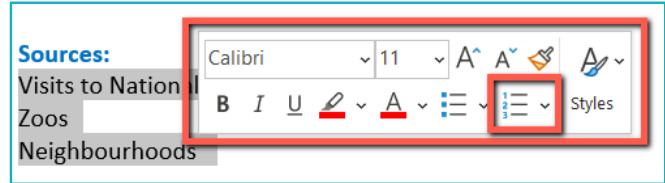

A Numbered list is used when we have several related items, but their order matters. It is also used when the number of entries has to be counted. The Numbering menu is next to Bullets.

# 7. Tidy Document

## How to use Numbering

### Method 1:

- a. List down all the items one below the other.
- b. Select all the items.

- c. A menu box will appear with shortcuts.
- d. Click on 'Numbering'.

### Sources:

1. Visits to National Park
2. Zoos
3. Neighbourhoods

- e. We can also click on 'Numbering' on the Home ribbon for the same result.

### Method 2:

- a. Click on the 'Numbering' menu. It will start with numbers 1, 2, 3, and so on. The type of numbering can be changed to other formats, like small or capital alphabets, and roman numbers.
- b. Press Enter to make a new entry on a new line. The numbers for each one will automatically increase.

A Numbered list is used here to count the number of sources from where Sejal has collected information.

## Exercise

### Fill in the blanks

- 4 The two tools to make different types of lists are \_\_\_\_\_ and \_\_\_\_\_.

### Tick mark ☒ the correct answer

- 5 Which tool helps us create a list of step by step instructions?

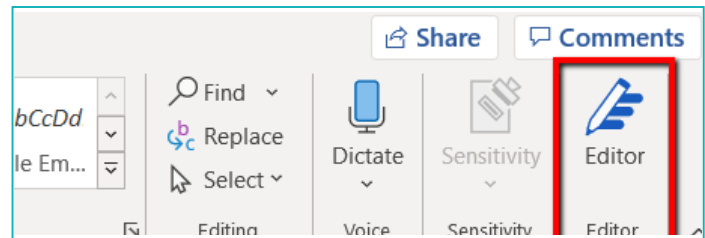

- |                                     |                                       |
|-------------------------------------|---------------------------------------|
| a. Table <input type="checkbox"/>   | b. Shapes <input type="checkbox"/>    |
| c. Bullets <input type="checkbox"/> | d. Numbering <input type="checkbox"/> |

## Editor – Spelling and Grammar Check:

A document should be free of mistakes. Word is an intelligent software which automatically detects our spelling and grammar mistakes. It highlights them so we can make corrections. Editor is a tool in Word which help us correct these mistakes.

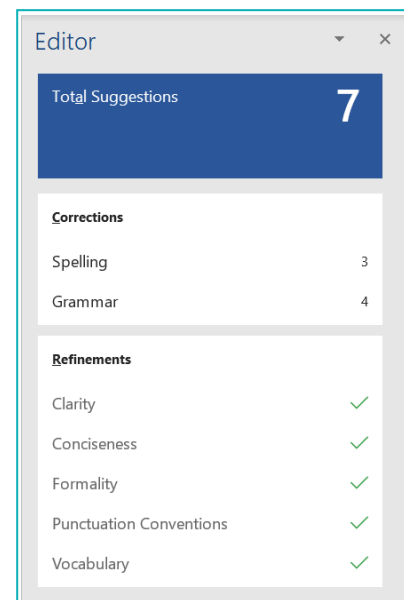

### How to spell and grammar check a document:

- a. On the right side of the Home ribbon, we can find the Editor menu.

- b. Click on 'Editor'. A tab will appear on the right hand side.
- c. Spelling errors will be highlighted with a red underline. Grammar errors will be highlighted with a blue double underline.
- d. When we open the Editor, it displays a list of spelling and grammatical errors.

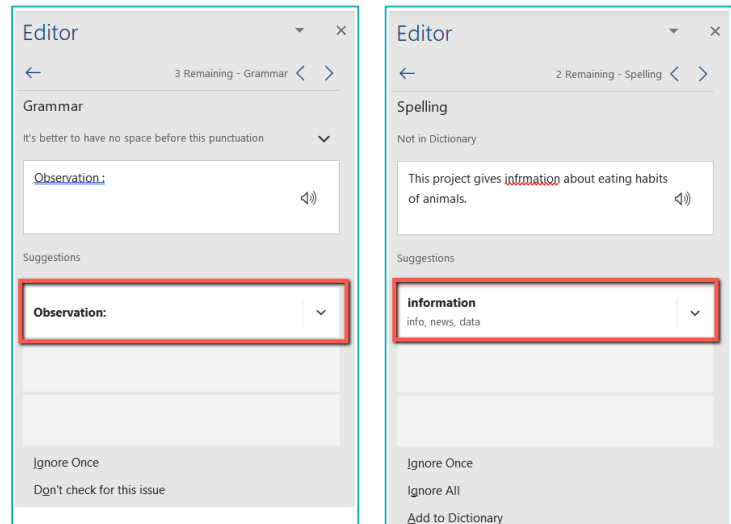

- e. The tool suggests corrections for spellings and grammar.
- f. Click to view the suggestions.

# 7. Tidy Document

## Spelling Suggestions

a. We can click on any of the suggested spellings to make changes in the document.

b. We can also ignore the highlighted error, or add it as a new word to the dictionary.

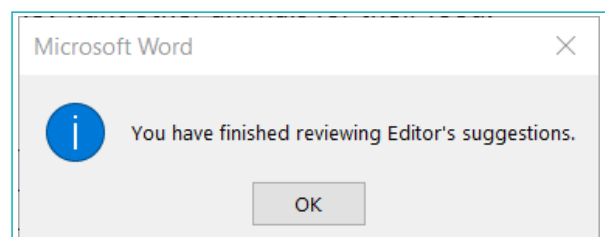

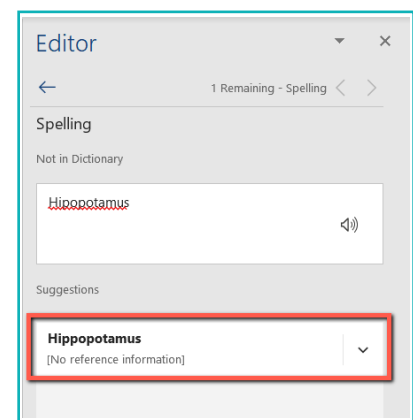

c. The document will automatically update.

## Grammar suggestions

a. Word also suggests grammar corrections and refinements.

b. Click on a suggested grammar correction to update the document.

c. After all the spellings and grammar issues have been corrected, a dialogue box will be displayed.

Sejal used the 'Editor' tool to correct the mistakes in her document and make it error free.

This is how the final document looks:

## Eating habits of animals

### Introduction:

All living things need food to grow and remain healthy. Food gives us energy to work and play. Plants prepare their own food whereas animals and humans depend on plants and other animals for their food. Animals are classified based on their eating habits. It will be interesting to see what kind of food animals eat.

This project gives information about eating habits of animals.

### Observation:

- Plant eating animals depend on grass, leaves, fruits and vegetables for their food.
- Plant eating animals do not have sharp teeth.
- Flesh eating animals eat flesh of other animals. They hunt other animals for their food.
- Flesh eating animals have sharp claws and teeth.
- Some animals eat both plants as well as animals.

| Plant eating animals | Flesh eating animals |
|----------------------|----------------------|
| Cow                  | Lion                 |
| Horse                | Tiger                |
| Goat                 | Hyena                |
| Elephant             | Cheetah              |
| Sheep                | Crocodile            |
| Hippopotamus         | Wolf                 |
| Giraffe              | Leopard              |

### Conclusion:

Animals and plants depend on each other for their food. Each living thing gets food and energy is passed from creature to creature.

2. Zoos
3. Neighbourhoods

## Exercise

### Fill in the blanks

- 6 Spelling errors are marked with \_\_\_\_\_ while grammar errors are marked with \_\_\_\_\_.

### Tick mark ☒ the correct answer

- 7 Which tool help us correct misspelled words?

- |                     |                          |                          |                          |
|---------------------|--------------------------|--------------------------|--------------------------|
| a. Tables           | <input type="checkbox"/> | b. Bullets and Numbering | <input type="checkbox"/> |
| c. Find and Replace | <input type="checkbox"/> | d. Editor                | <input type="checkbox"/> |

## 7. Tidy Document

An organised document presents information clearly. We can create presentable documents with different tools in Word. When writing space is used well, the document looks neat and orderly. The Ruler tool helps us align text, tables, graphics, and other elements in the document. Tables help us organise data and view information at a glance. Bulleted and Numbered lists help us organise information one below the other. The Editor is a tool which helps us correct spelling and grammar errors.

### Tech Flash

- **Writing Space** : The writing space is the white space in the document where we type.
- **Ruler** : The writing space can be adjusted with the Ruler tool.
- **Margin** : The grey space on the edge of a document is called a margin.
- **Bullets** : A tool to items when the order is not important.
- **Numbering** : A tool to list items when their order is important.
