

What's up Sanya? Why do you look upset?

Have you heard of Slide Master? You can use it to create your own theme and design for all the slides.

I'm making a PPT for class, but it is taking too long to make all my slides look the same.

## **Recall:**

*A theme is a predefined combination of colours, fonts, background images and effects.*

Have you ever seen a presentation which uses a design that is not available as a Power Point theme?  
Can we create a custom layout design?

Slide Master can be used to create custom layout designs.

## Slide Master

**Slide Master** is a tool to create customised theme designs for all slides in a presentation. With slide master, all slides can have the same fonts, colours and images like logos and backgrounds. Changes like these can be made in slide master. They will apply to all slides in the presentation.

## Importance of Slide Master Tool

- 1. Uniformity:** It is easy to make the slides in a presentation look consistent.
- 2. Avoids repetitive work to save time:** Theme, layout, background, colour, fonts, and position of all slides can be edited in a single master slide and applied to the rest.
- 3. Custom theme:** We can create customised themes and layouts.

**Note:** We can also edit existing design themes with slide master.

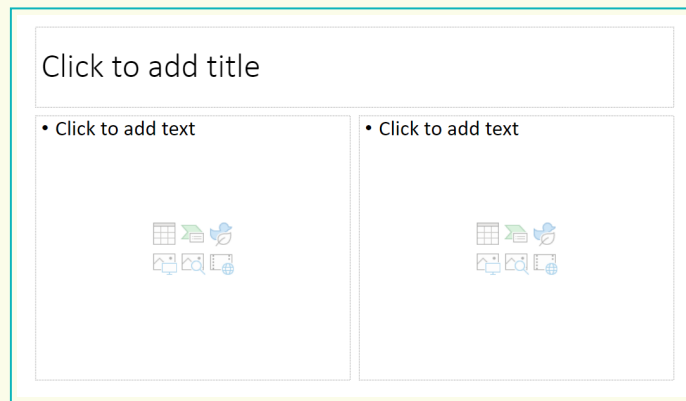

## Recall:

**Placeholder:** A placeholder is a container window on a slide for text, graphics, or video with specific formatting. It is displayed with dotted borders.

Each type of content (title, text, video, image) has a different placeholder.

**For example:** Dotted boxes with text that says “click to add” are placeholders

- **Layouts:** A PowerPoint slide layout is a set of placeholders on a slide. Each slide layout is set up with different types of placeholders in different locations on each layout.

## Exercise

### State whether True or False

1

A box with a dotted outline, used for content placement on a slide is called a placeholder.

\_\_\_\_\_

2

Background images have to be individually added to all slides with Slide Master.

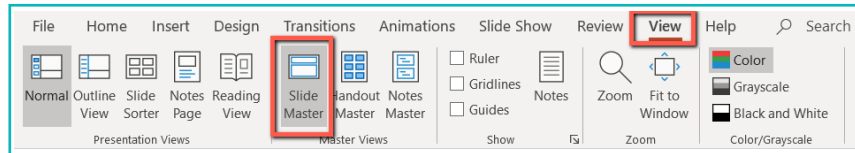

\_\_\_\_\_

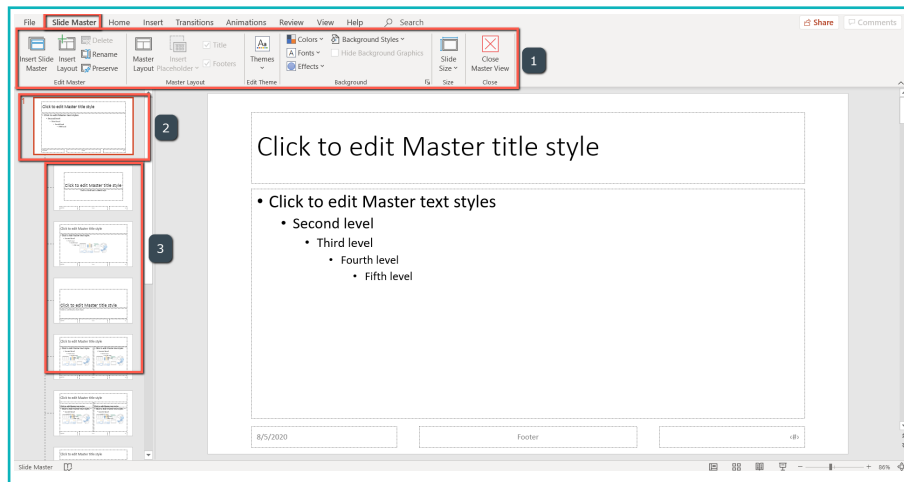

Use Slide Master to create a presentation for an interschool Power Point Presentation competition. The topic is “Importance of Vegetables and Fruits”.

## 1. Open MS PowerPoint. We will first create a theme layout design.

a. To open Slide Master view, on the **View** tab and select **Slide Master**:

b. A new tab named Slide Master will appear in the ribbon with options to edit.

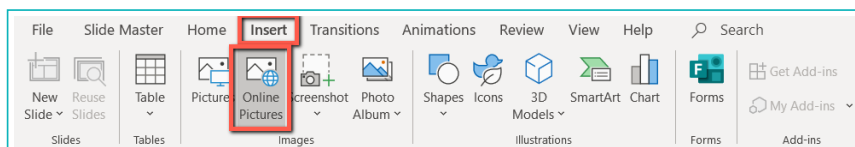

- Slide Master tab:** This tab has options like master layout, themes, colours, fonts, background slides, etc.
- Master Slide:** The master slide is the top slide in the thumbnail pane on the left side of the window.
- Layout Masters:** Layouts based on the master slide design are called layout masters. They will appear just below the slide master.

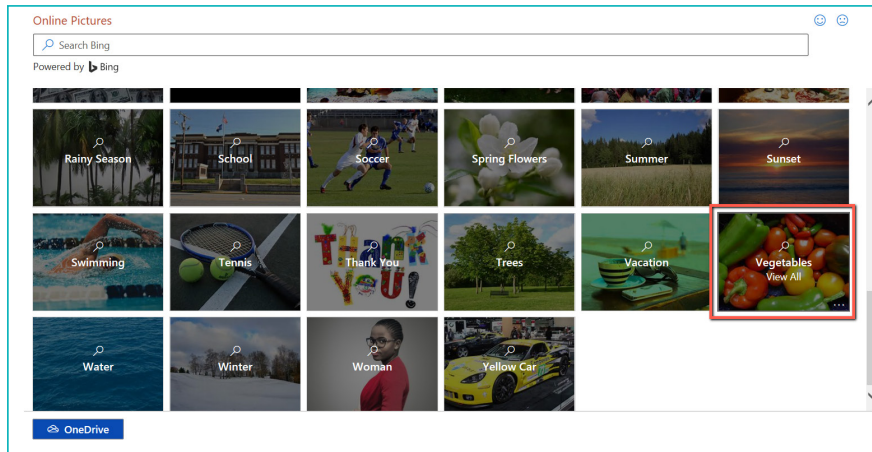

An image of vegetables and fruits can be added to the layout as a background or side strip. We can also add a school logo, and fonts and colours that suit the pictures.

## 2. Add a side strip image as a design in layout.

a. Click on Online Pictures in the insert tab. We will add a picture of vegetables and fruits to the master slide. This will create a connect to our topic.

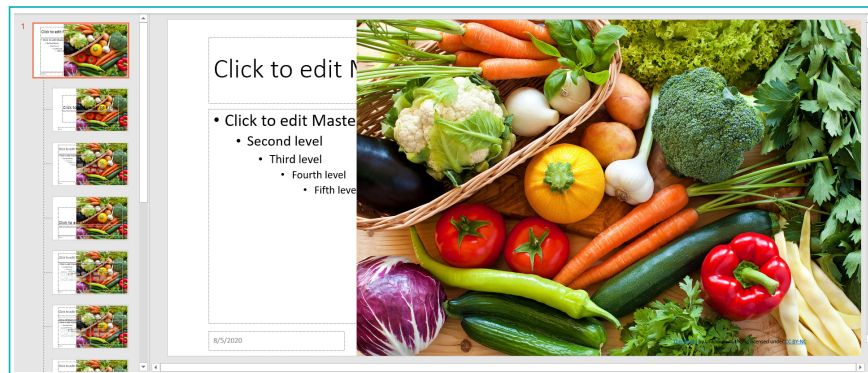

b. Select the category “vegetables”.

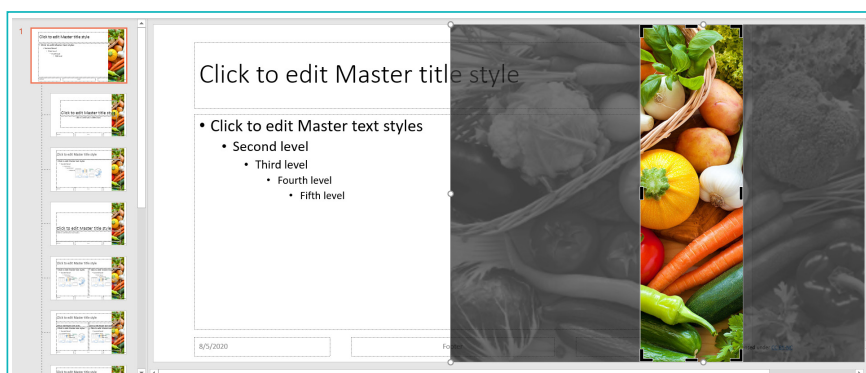

c. Select an image that best represents the PPT. For example: A table filled with vegetables.

d. Click on insert.

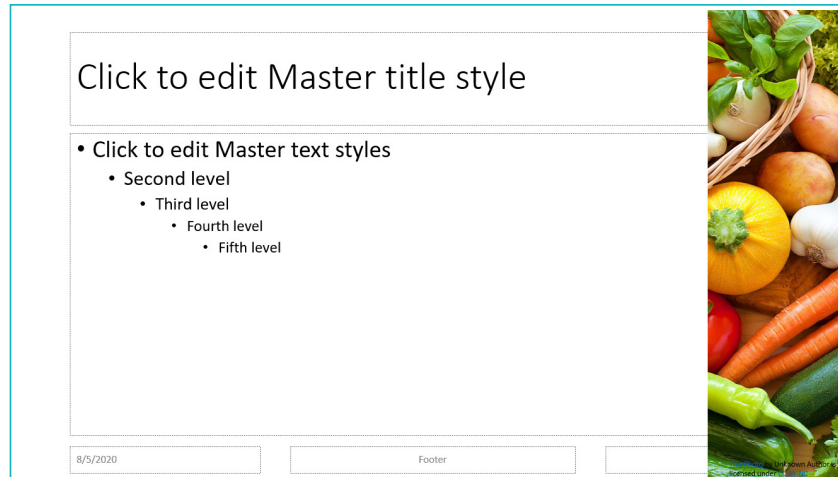

e. Drag the picture to the master slide and match it to the slide height.

f. Right click on the image and select crop. Crop it into a vertical strip so it can be placed at the edge of the slide.

**g.** The master slide will have a vertical image strip in its design.

**h.** The image strip will be added to all slides below the master slide.

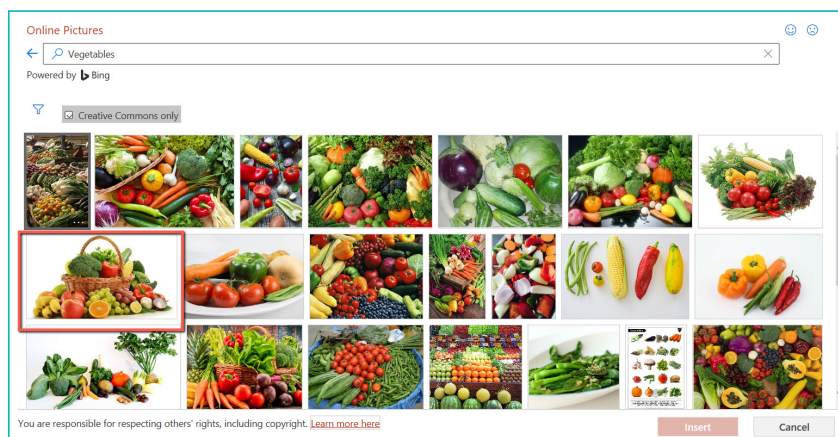

When we make changes in the master slide, other layout masters that are based on it will also be changed. We can also make specific changes to layout masters. They will be applied to slides with these specific layouts.

**Note:** It's a good practice to edit the slide master and layout masters before creating individual slides. This way, all slides the presentation will have custom edits.

## 3. Add a background image

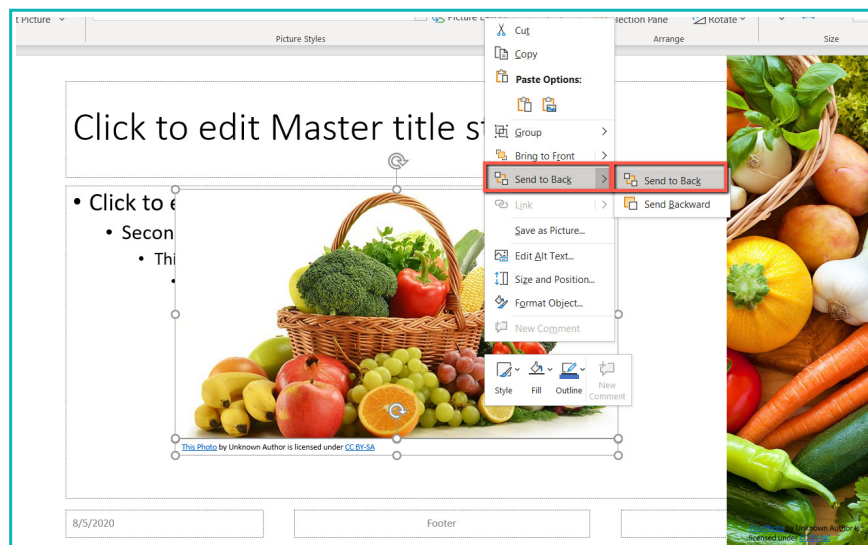

It needs to be transparent so the text on the slide can be read.

**a.** Insert an image of a fruit and vegetable basket from the online image option in the insert tab.

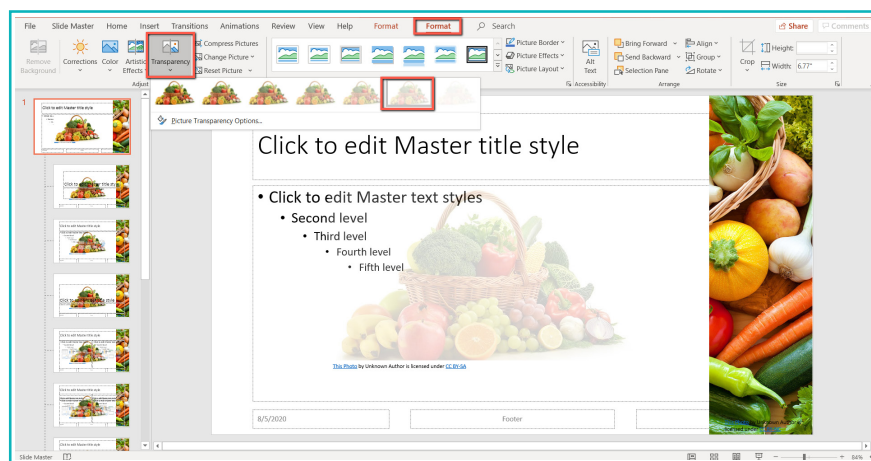

- b. Right click on the image and click on “send to back”. This will send the image to the background.
- c. This will ensure that text appears on top of the image.

- d. Drag the edge of the image to change its size to fit the slide.
- e. Select the image and click on the format tab in the ribbon.
- f. Click on transparency and select a transparent version of the image, such that text will be clearly visible on top.

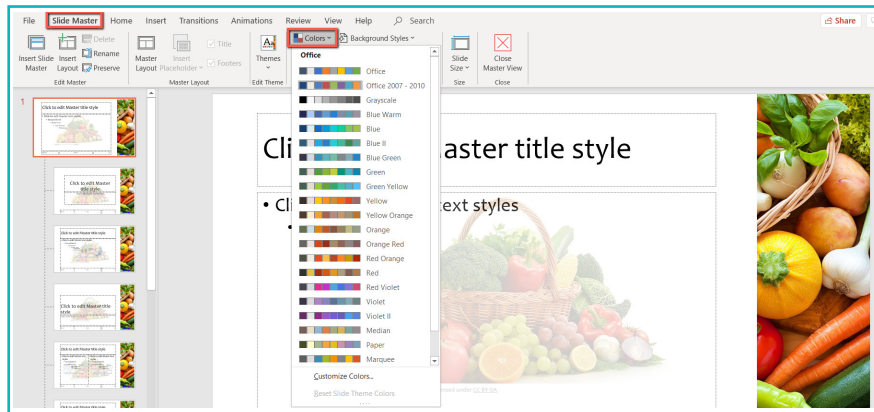

- g. Similarly, a school logo can be added with permission.

## 4. Change the font and colour in the master slide with slide master.

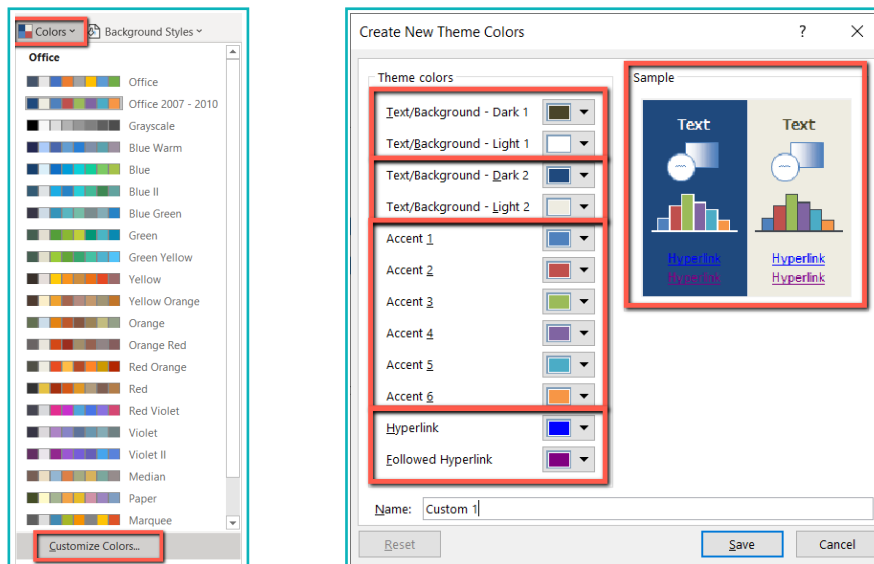

Along with great pictures and a logo, we can change the font and colour to match the images and theme of the presentation.

- Click on Colors in the Slide Master tab to change the colours in the slide.

**Note:** There are many combinations to choose from. We can also edit a combination and select custom colours.

- Click on the Customize Colors option at the bottom of the drop down.
- Select appropriate colours for the text and background with the help of samples shown next to the colour options.

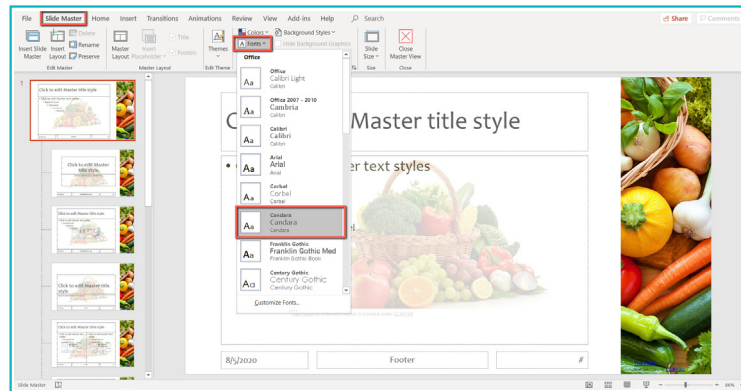

# 10. Slide Master

Now, change the text font to suit the topic.

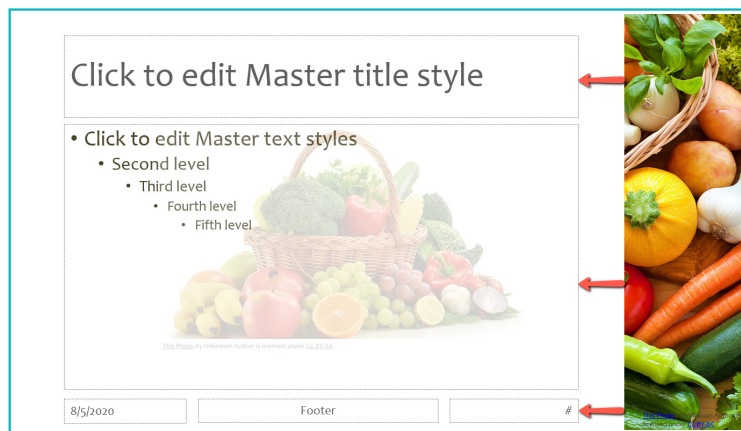

d. Click on the font option in the slide master tab. Select a font that goes with the theme.

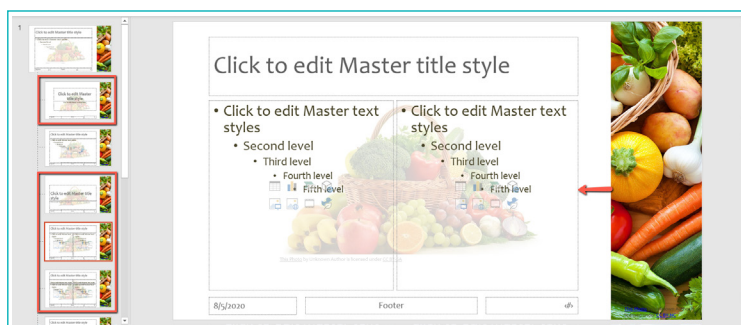

We can see that the placeholder window overlaps with the image strip on the right.

e. Placeholder windows can be resized and rearranged in the master slide, so that they don't overlap with side image.

f. This will also make sure the text stays in the available space.

g. This change in the master slide will change the title and text placeholder window sizes and positions in other master layouts. It can be repeated for other placeholder windows as well. They do not need to be in the master slide.

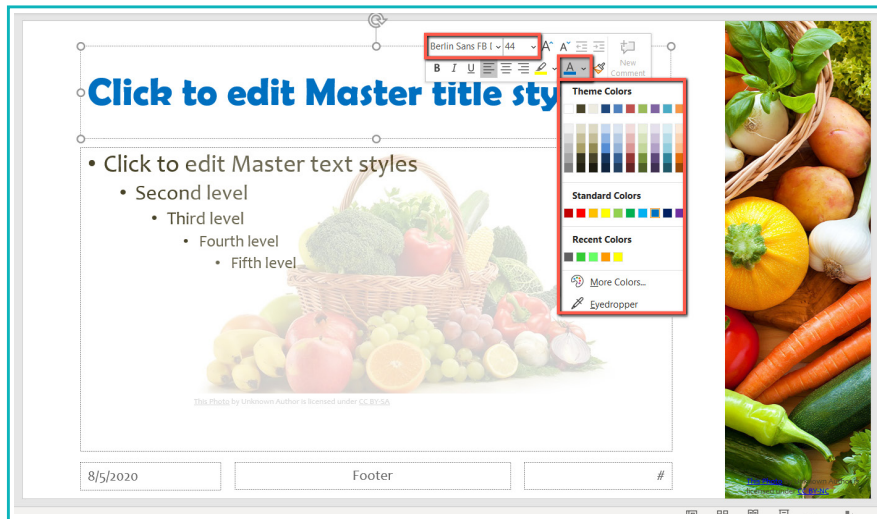

This is how Slide Master is edited so that all the slides in a presentation have a uniform design and layout.

## 5. Change the font and colour in the title placeholder

We can edit the title placeholder that replicates the title changes in all the slides.

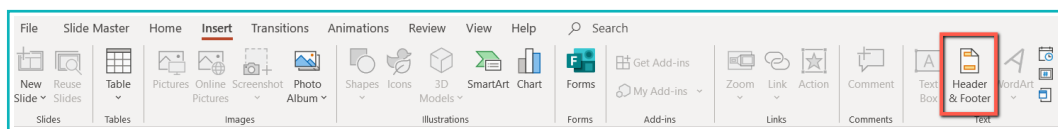

- a. In the master slide, right click on the title placeholder and change the font and colour of the title placeholder.

- b. If a placeholder window is not available in the master slide, go to layout masters with the specific placeholder and edit the font and colour.

## 6. Add a custom header and footer to make the slides look more attractive.

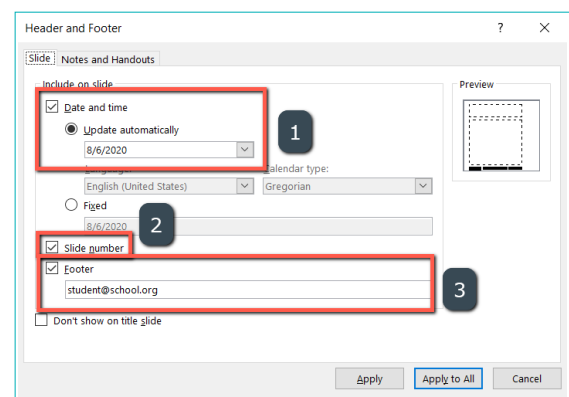

- a. Click on Header and Footer in the insert tab when the slide master is open.

- b. In the header and footer window, go to the slide tab:

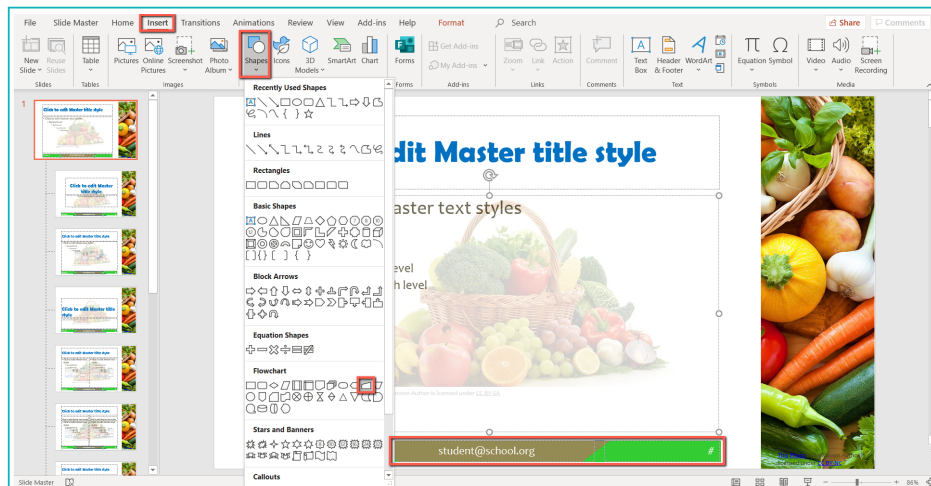

1. Check mark the date and time option and set it to display the date.
2. Check mark slide number to display the page number.
3. Check mark footer to display text in the footer. It could be an email Id or the school name.

- c. This will add these footer elements to all slides.

## 7. To add designs and colours to suit the theme, we can insert shapes.

- Insert a shape and edit it to fit as the footer.
- Right click on the shape and send it backwards to make the footer text visible.
- Change the colour and font of the footer text to contrast the background.

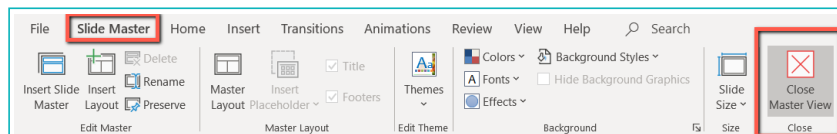

- The final footer could look like a strip of colours with text.

For example:

- Close the slide master tab to stop editing. Now, create slides for the presentation competition.

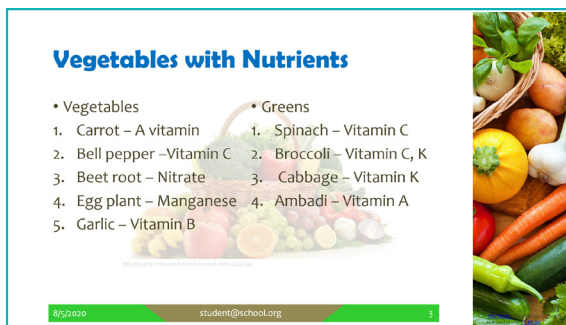

The slides will follow the themes we have created, and will look something like this:

Title Slide

Summary Slide

Slides with lists using numbering and bullets

Slide designs can be created and customised with the Slide Master tool. It is simple to learn and use. It reduces the amount of time we spend to design individual slides. All changes can be made to a presentation's master slide. Slide Master helps us create presentations that look unique.

## Exercise

### State whether True or False

- 3** Changes made to the font and colour of the master slide will appear in layout masters.

 \_\_\_\_\_

- 4** We can edit layout masters individually for specific layout changes to appear in all slides of a master layout.

 \_\_\_\_\_

### Tick mark ☒ the correct answer

- 5** Under which tab will you find the Master Slide command?

a. Insert ☐

b. Design ☐

c. View ☐

d. Review ☐

- 6** A footer can contain the following:

a. Page number ☐

b. Date ☐

c. Footer Text ☐

d. All of the above ☐

- 7** What can be used to make attractive design themes in Slide Master?

a. transparent background images ☐

b. Logos ☐

c. Picture Side strip ☐

d. All of the above ☐

## Tech Flash

- **Slide Master** : Slide Master is a feature to create customized theme designs for all slides in presentation.
- **Master Slide** : The master slide is the top slide in the thumbnail pane on the left side of the window.
- **Layout Masters** : Different layouts based on the master slide design are called layout masters. They appear just below the slide master.
