

Student's Name		Grade	8
Subject	Computer	worksheet	

Q1: choose the correct answer:

1-What is the first step in the game design process?

- a) Prototyping
- b) Conceptualization
- c) Playtesting
- d) Marketing

Answer: b) Conceptualization

2-Which of the following is NOT a core element of a game design document (GDD)?

- a) Storyline
- b) Target audience
- c) Budget allocation
- d) Game mechanics

Answer: c) Budget allocation

3-What is the purpose of a "paper prototype" in game design?

- a) To test game mechanics quickly and cheaply
- b) To create the final graphics
- c) To write the game's code
- d) To market the game

Answer: a) To test game mechanics quickly and cheaply

Student's Name		Grade	8
Subject	Computer	worksheet	

Q1(A) Match the word in column (A) with the correct option
in column (B):

Attribute	#	value
1- For loop	2	Language for database queries
2- SQL	1	Repeats code for a sequence
3- Neural Network	4	Fixes missing/inconsistent data
4- Data Cleaning	3	AI model inspired by biology

(B) Re-arrange the next stages to data analysis process:

- (3) Data Visualization
(2) Data Cleaning
(4) Data Collection
(1) Data Analysis

Student's Name		Grade	8
----------------	-------	-------	---

Q3: complete the following from between brackets:

(normalization - Unsupervised - select - for)

1- In Python, the for loop iterates over a sequence (e.g., a list).

2- The SQL command select retrieves data from a database..

Unsupervised learning groups similar data points without labels.

4- Converting data into a standard format is called normalization.

8

Q1: choose the correct answer:

1- Which phase involves fixing bugs and balancing gameplay?

- a) Pre-production
- b) Production
- c) Post-production
- d) Conceptualization

Answer: c) Post-production

2- What is "iterative design" in game development?

- a) Designing the game once without changes
- b) Repeating the design process with improvements
- c) Only focusing on graphics
- d) Skipping the testing phase

Answer: b) Repeating the design process with improvements

Short Answer Questions:

1- **Define "core gameplay loop" and give an example.**

Answer: The core gameplay loop is the repetitive cycle of actions that players engage in (e.g., "shoot, loot, upgrade" in a shooter game).

2- **Why is playtesting important in game design?**

Answer: Playtesting helps identify bugs, balance issues, and player experience problems before the final release.

3- **Name three key sections of a Game Design Document (GDD).**

Answer:

Game mechanics - Story/narrative - Art style - Level design - Target audience

Q1 : Read and put True(✓) or false (✗) :

1- The game design process starts with coding the game.

() True

() False

2- Prototyping is an essential step in game design to test ideas early.

() True

() False

3-Game designers do not need to consider the target audience when designing a game.

() True

() False

4-A game design document (GDD) helps keep the development team aligned.

() True

() False

5-Iteration is not necessary in game design; the first version should be perfect.

() True

() False

Subject	Computer	worksheet	

Q1: choose the correct answer:

1- Which step is critical for ensuring data accuracy before analysis?			
Data visualization	Data cleaning	Data encryption	Data compression
2- What is the output of for i in range(3): print(i) in Python?			
0 1 2	1 2 3	3	0 1 2 3
3- Which SQL command is used to remove a table?			
DELETE	DROP	REMOVE	TRUNCATE
4- Which ACID property ensures transactions are "all or nothing"?			
Durability	Isolation	Consistency	Atomicity

Q2: Read the following and put (✓) for the correct answer and (x) for the wrong answer

1) Data normalization is part of data preprocessing in data analysis.	(✓)
2) In Python, a while loop checks the condition after executing the loop body.	x
3) A primary key uniquely identifies each record in a database table.	(✓)
4) Neural networks are a type of unsupervised learning algorithm.	x
