

15. Analyse Data

Mission: Planning the Perfect Birthday Party! 🎂

Let's learn how to use Spreadsheets to organize and analyze information.

The Goal: Help Rohan plan his party using the power of data!

The Mission Brief

- **Rohan's Goal:** Plan a birthday party. 

- **The Budget:** His mother gave him Rs. 2000. 

- **The Challenge:** He has price estimates from 3 different vendors: **Maresh**, **Rajesh**, and **Sagar**. 

- **The Tool:** We will use a **Spreadsheet** to find the best option that fits the budget. 

1			20
2		30	
3		20	
4	29		

Tool #1: Conditional Formatting

	A	B	C	D	E
1					
2					
3					
4		25			
5					

Greater Than 20
→ Turn **Red**

	A	B	C	D	E
1					
2					
3					
4		8			
5					

Less Than 10
→ Turn **Green**

	A	B	C	D	E
1					
2					
3					
4		12			
5					

Between 10 and 20
→ Turn **Yellow**

Tool #2: Sort

Sort organizes data!

Before Sorting

Student Name
Nisha
Abhishek
Jayant
Zoya
Ritesh
Dipti

After Sorting

Student Name	Roll no.
Abhishek	1
Dipti	2
Jayant	3
Nisha	4
Ritesh	5
Zoya	6

A ↑ Use Sort to arrange data Alphabetically
↓ Z (A-Z) or Numerically (1-10).

Tool #3: Filter

Name	Pet 
Abhishek	Dog
Jayant	Dog
Neha	Dog
Nisha	Dog

Filter narrows down data to show **only** what you need.

It **hides** the rest (it doesn't delete it!).

Phase 1: The Party Data

Sr. No.	Party Supplies	Mahesh	Rajesh	Sagar
1	Pizza (20 Slices)	1200	1000	900
2	Cake	350	300	400
3	Balloons	120	100	100
4	Ribbons	100	110	120
5	Chocolate Shake	500	400	550

Just looking at these numbers is confusing. **Who is actually the cheapest?** 😞

Step 1: Compare Prices (Color Scales)

Sr. No.	Party Supplies	Mahesh	Rajesh	Sagar
1		1200	1000	900
2		350	300	400
3		120	130	100
4		100	110	120
5		550	400	500

...Here in a the table data from the previous slide:

-  Red = Costly (Stop!)
-  Yellow = Medium (Wait)
-  Green = Cheap (Go!)

Look! Rajesh has a lot of Green cells.

Step 2: Calculate the Total Cost +

Sr. No.	Party Supplies	Mahesh	Rajesh	Sagar
1	Party supplies	150	150	150
2	Flawngs	300	340	700
3	Check	600	1000	1000
4	Cola costs	700	360	700
5	Ponn balls	100	440	300
Total Cost (Rs.)		2320	1940	2020

We use the SUM function to add up the prices for each vendor.

=SUM()

Step 3: The Budget Check

Budget:
2000

Table	Mahesh:	Rajesh:	Sagar:
Total Cost	Mahesh: 2320	Rajesh: 1940	Sagar: 2020

****Conditional Formatting Rule:****

 **Greater Than 2000:** Turn **RED** (Over Budget!)

 **Less Than 2000:** Turn **GREEN** (In Budget!)

Step 4: Finding the Winner 🏆

Party Supplies	c		
	Mahesh	Rajesh	Sagar
Masza			725
Cake			300
Chocolate Shake			400
Pizza			1000
Sagar			725
Cake		300	300
Chocolate Shake	200	400	400

Sort A to Z

Sort Z to A

Filter by Color

✓ Green Cell Color

Rajesh's Green Items

Cake (300)

Chocolate Shake (400)

Pizza (1000 - Yellow but accepted as low relative to others)

Filter by **Green Color** to see who offers the best deals on individual items.

Mission Accomplished! 🎉

****The Decision: Rohan chooses Rajesh.**

****Why?***

1. ***Total Cost:** Rs. 1940 is under the Rs. 2000 budget. ✅
2. ***Value:** He offers the lowest price on the most items. ✅

Great job analyzing the data!

Quick Review: What did we learn? 🧠

Conditional Formatting

Colors cells based on rules (like High vs. Low).

Sort

Arranges data in order (Alphabetical or Numerical).

Filter

Hides unwanted data to show only what we need.

Class Exercise: Fill in the Blanks ✍️

1. _____ lets us apply specific formatting to cells if a certain condition is true.
2. _____ is a process that arranges data into a meaningful order.
3. _____ is used to narrow down data to display only what we need.

Answers: 1. Conditional Formatting, 2. Sort, 3. Filter

True or False? 🤔

Sort is used to automatically color cells when data meets a criteria.

FALSE (That is Conditional Formatting!)

Filter does not delete data; it just hides it from the screen.

TRUE

Tech Flash ⚡

Conditional Formatting

Applies specific formatting (like color) to a cell if a certain condition is true.

Sort

A process where data is arranged in a meaningful order (A-Z or 1-10).

Filter

Used to narrow down data to display only the information we need.

Spreadsheet

A tool used to organize, calculate, and analyze large sets of data.
