

# Let's Create Graphs!

Turning Data into Pictures | Grade 3 Math & Tech

# The Problem: Too Many Numbers!

# What are we working with?

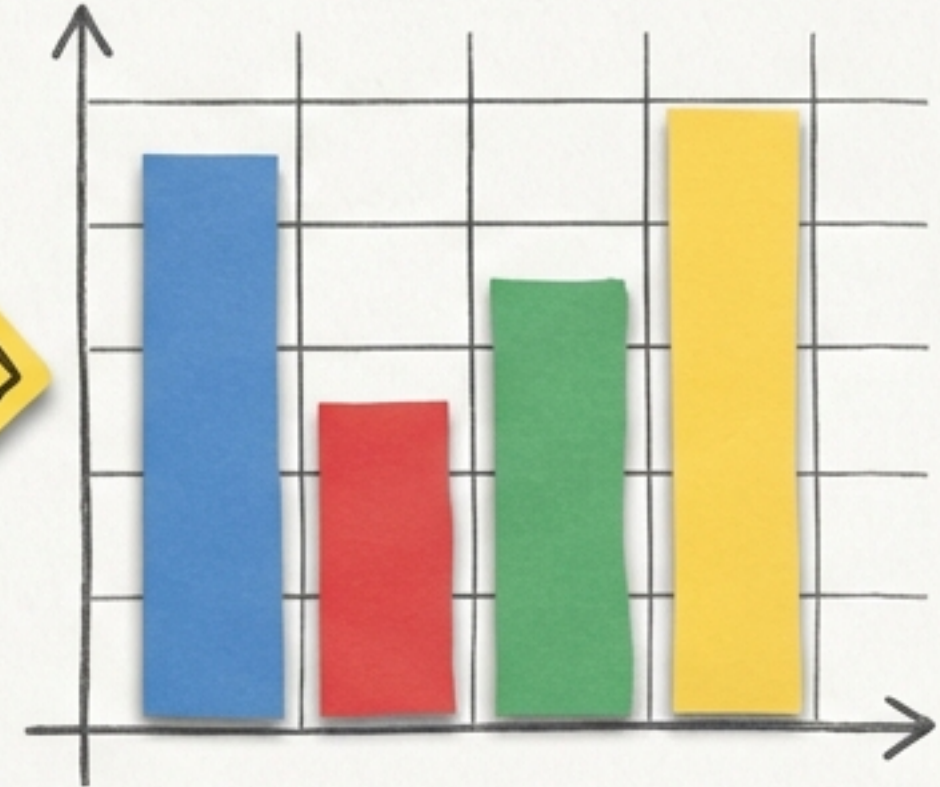

## DATA

Data is a collection of information. This can be numbers, words, or descriptions.

Graphs help us see patterns!

## GRAPH

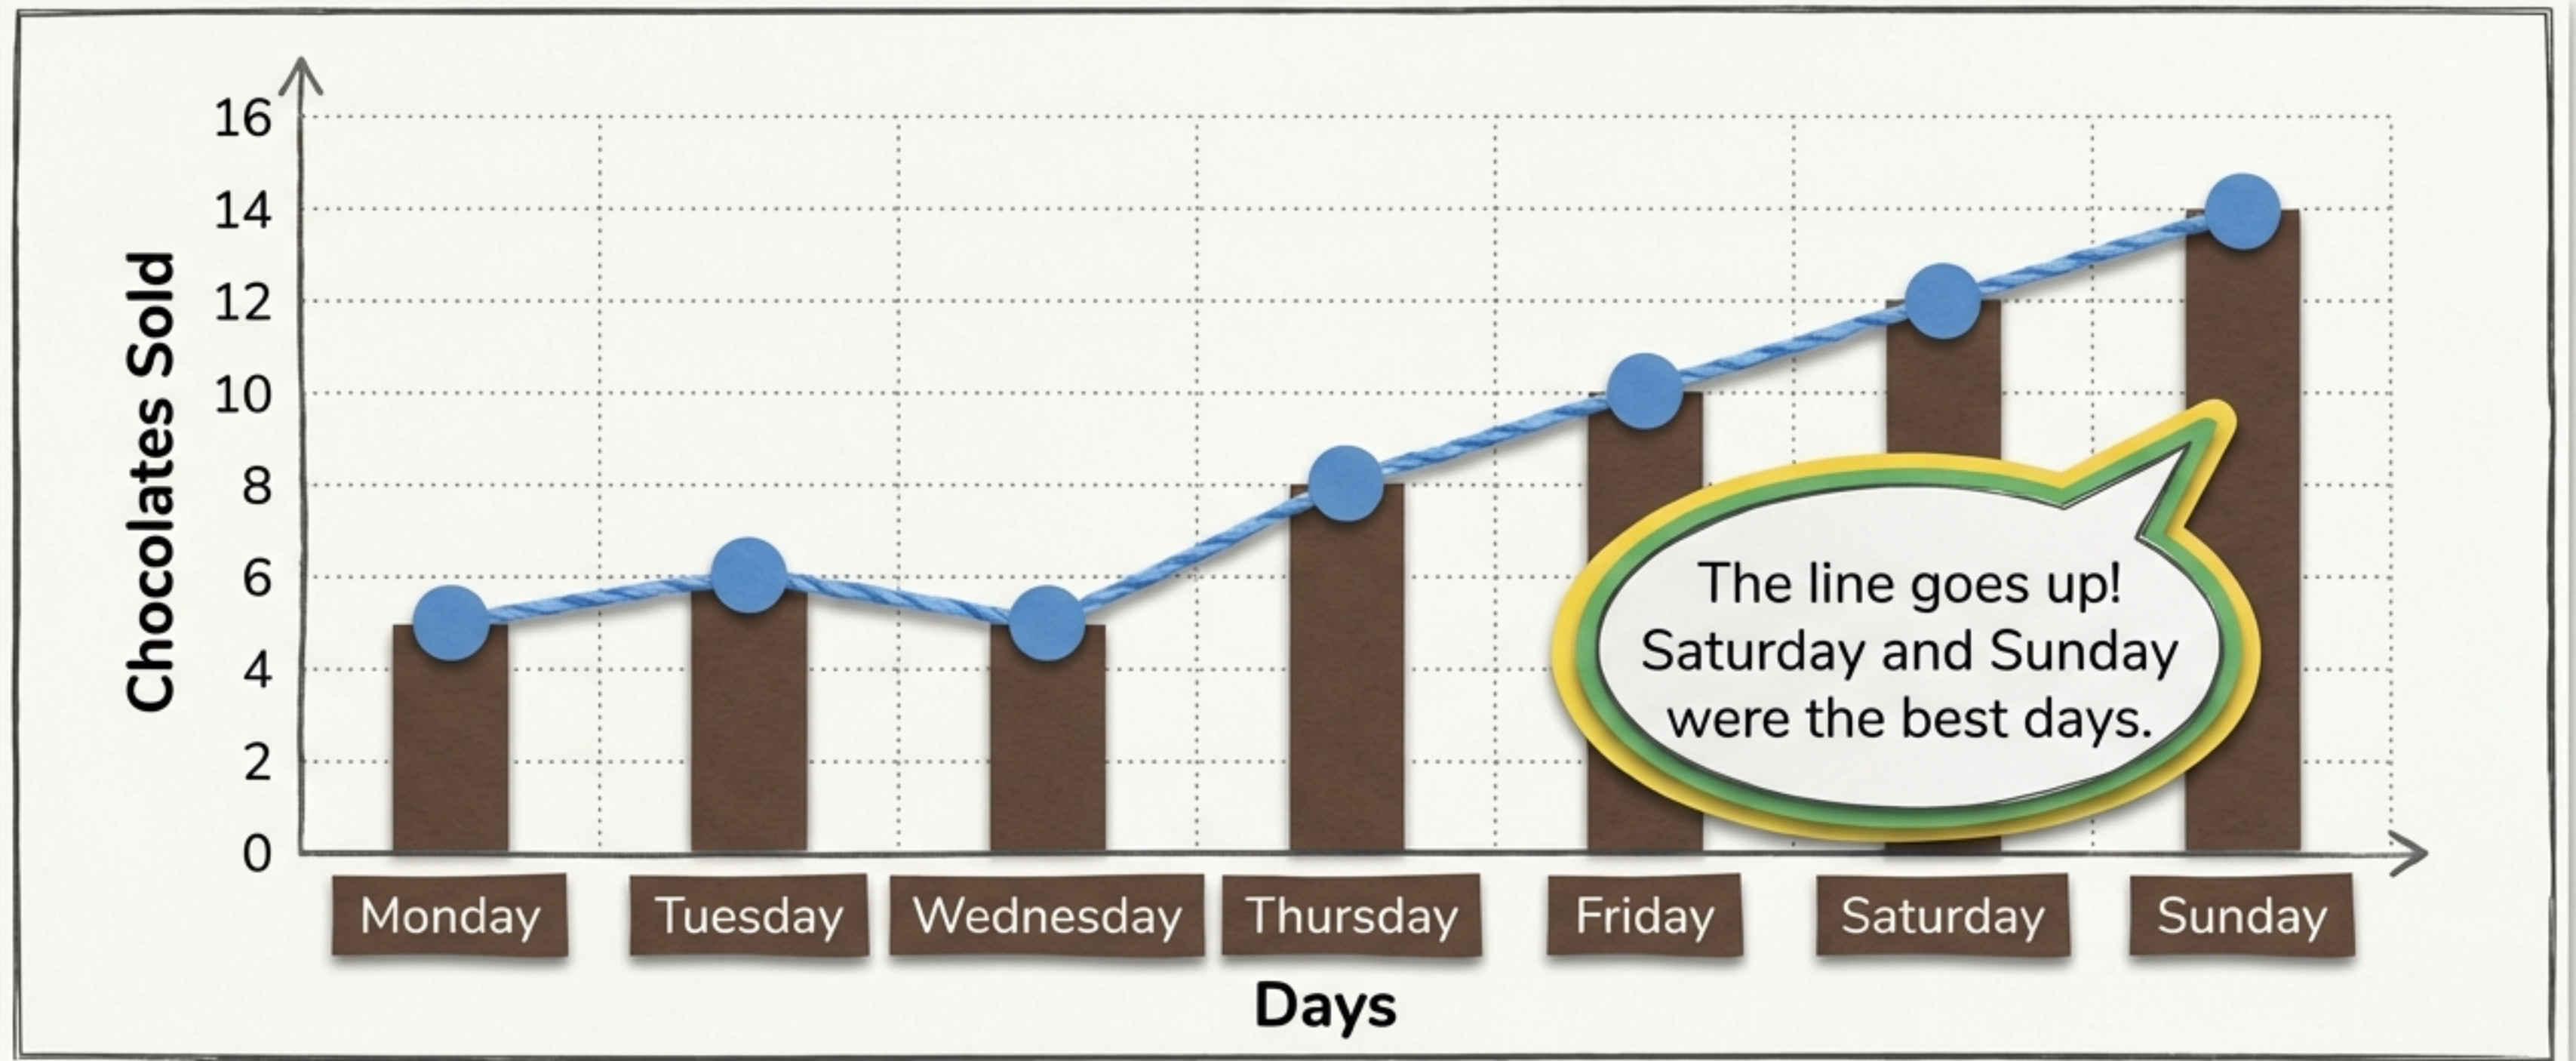

A Graph is a picture that shows data with lines, bars, dots, or shapes.

# Type 1: The Line Graph

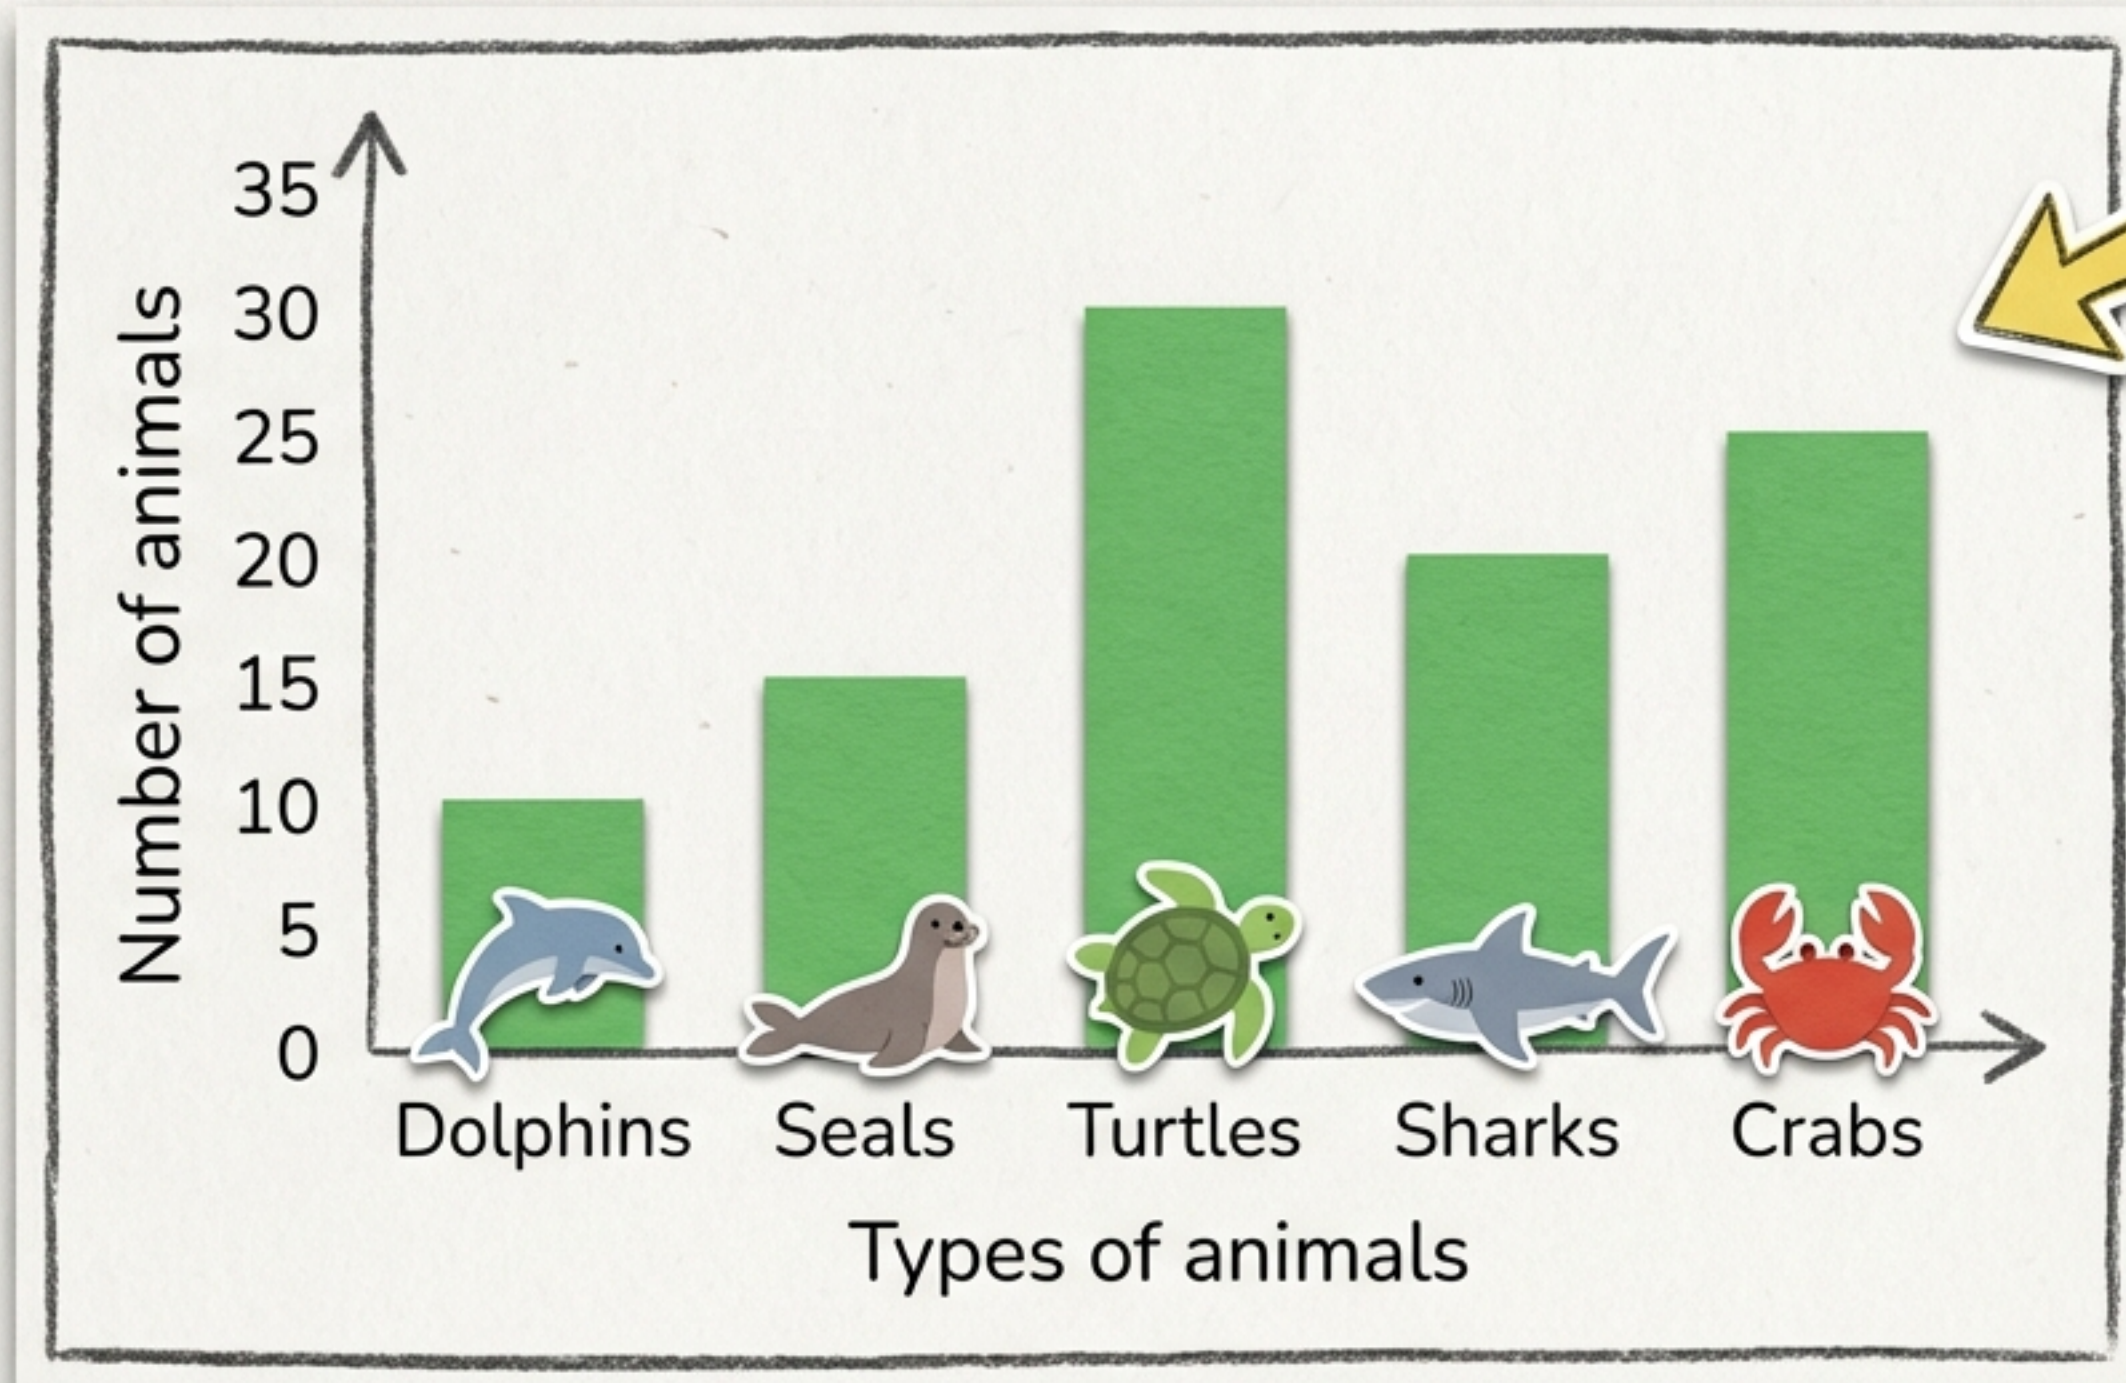

Best for showing Change Over Time

# Type 2: The Bar Graph

## Best for Comparing Different Groups

**The Rule:**  
Taller bar =  
Bigger number.

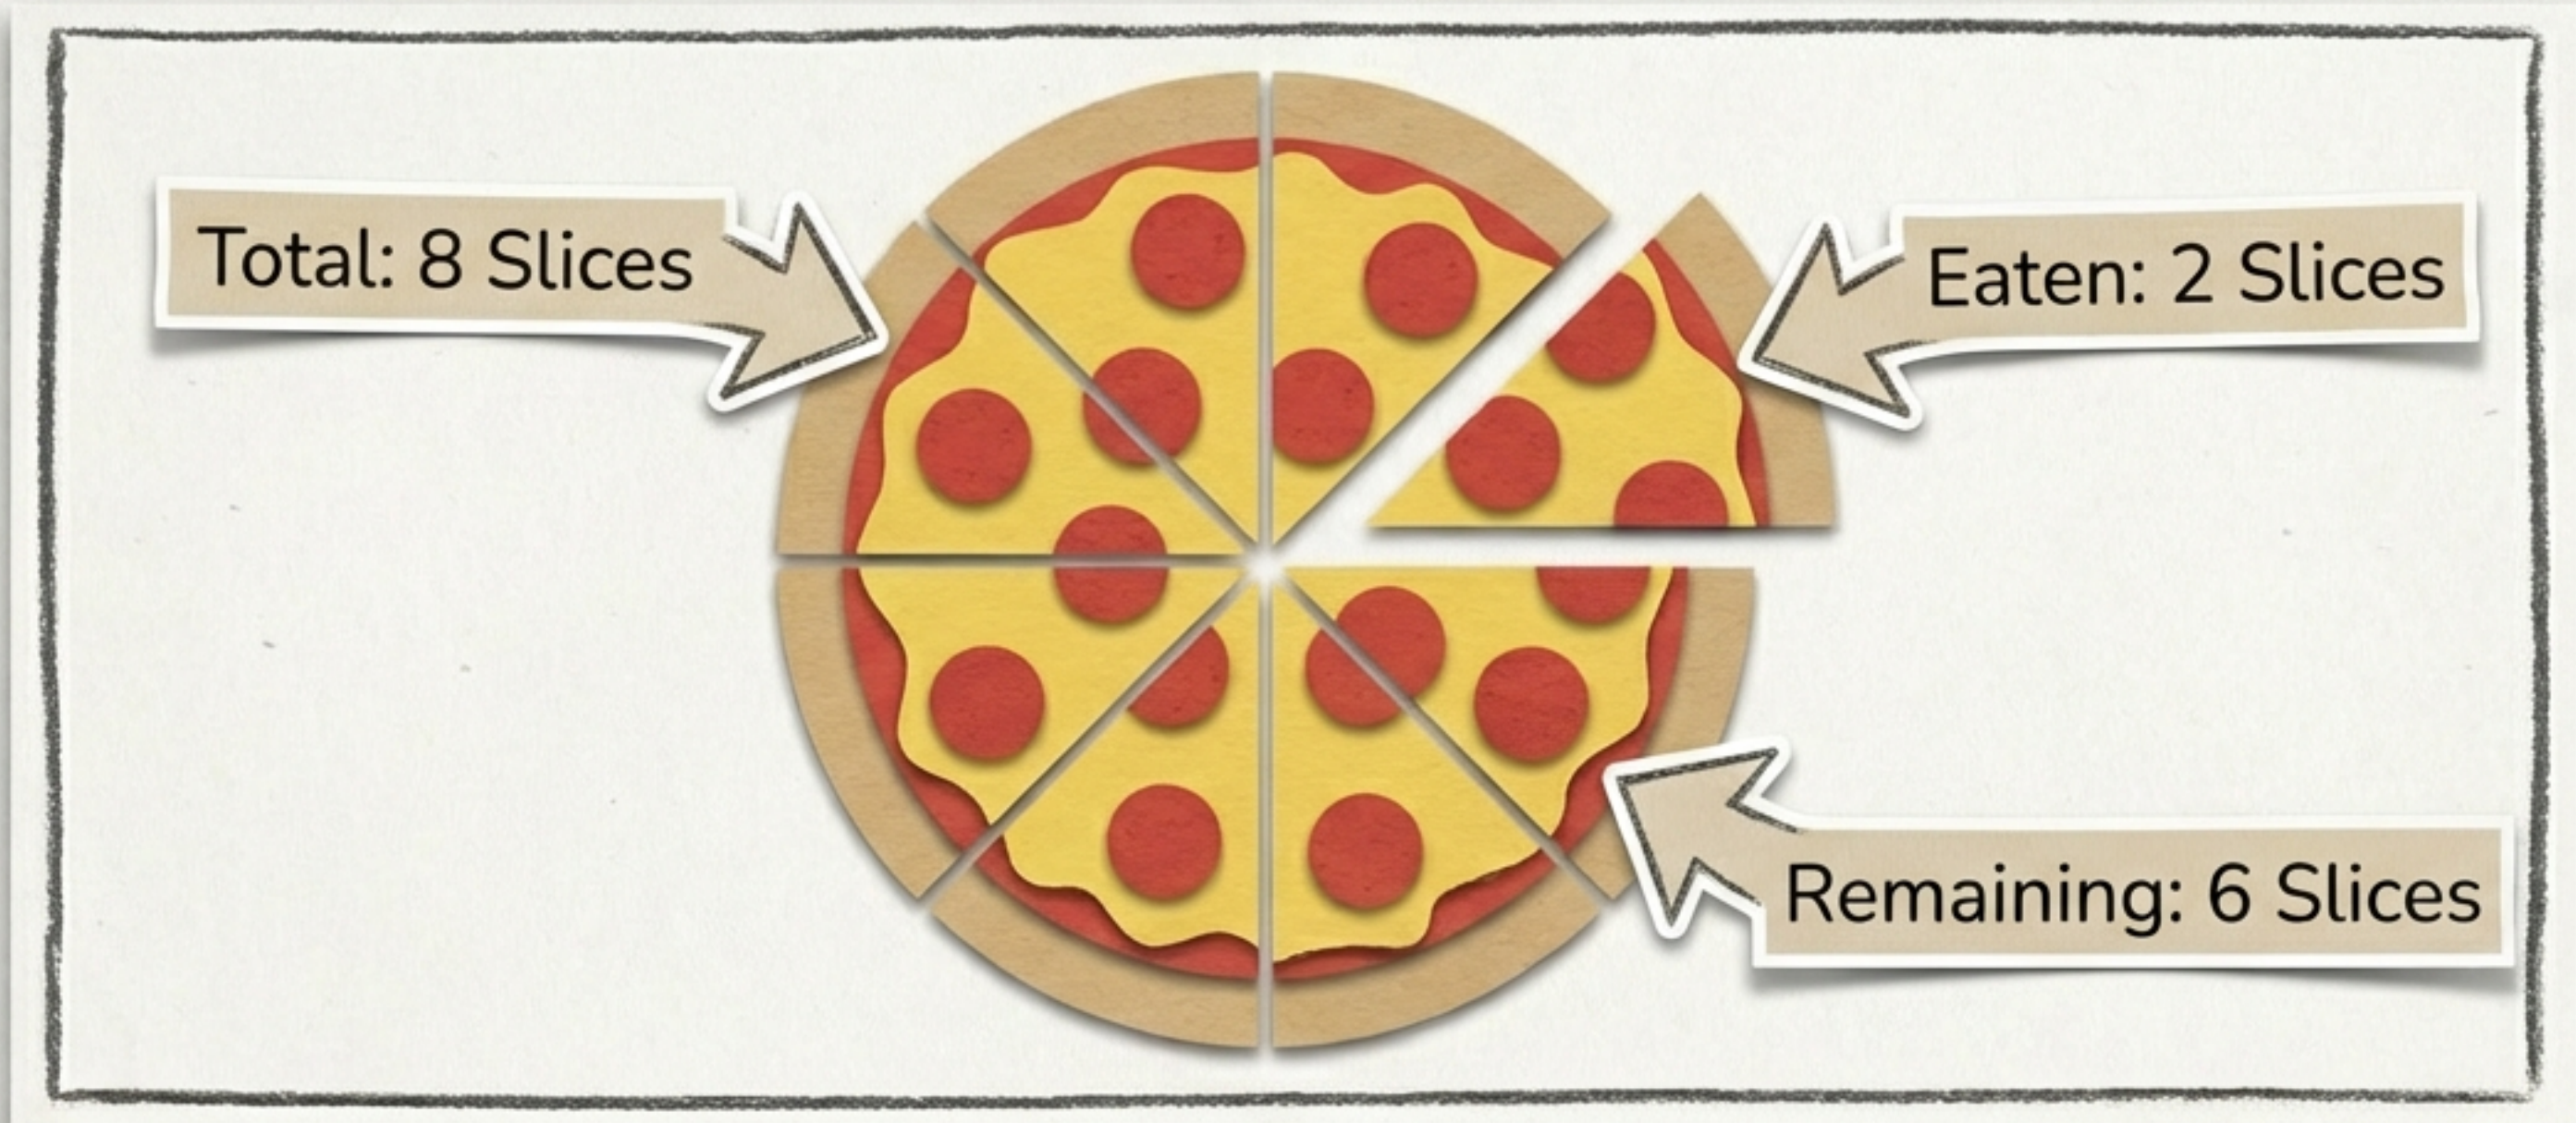

Most seen:  
Turtles

Least seen:  
Dolphins

# Type 3: The Pie Chart

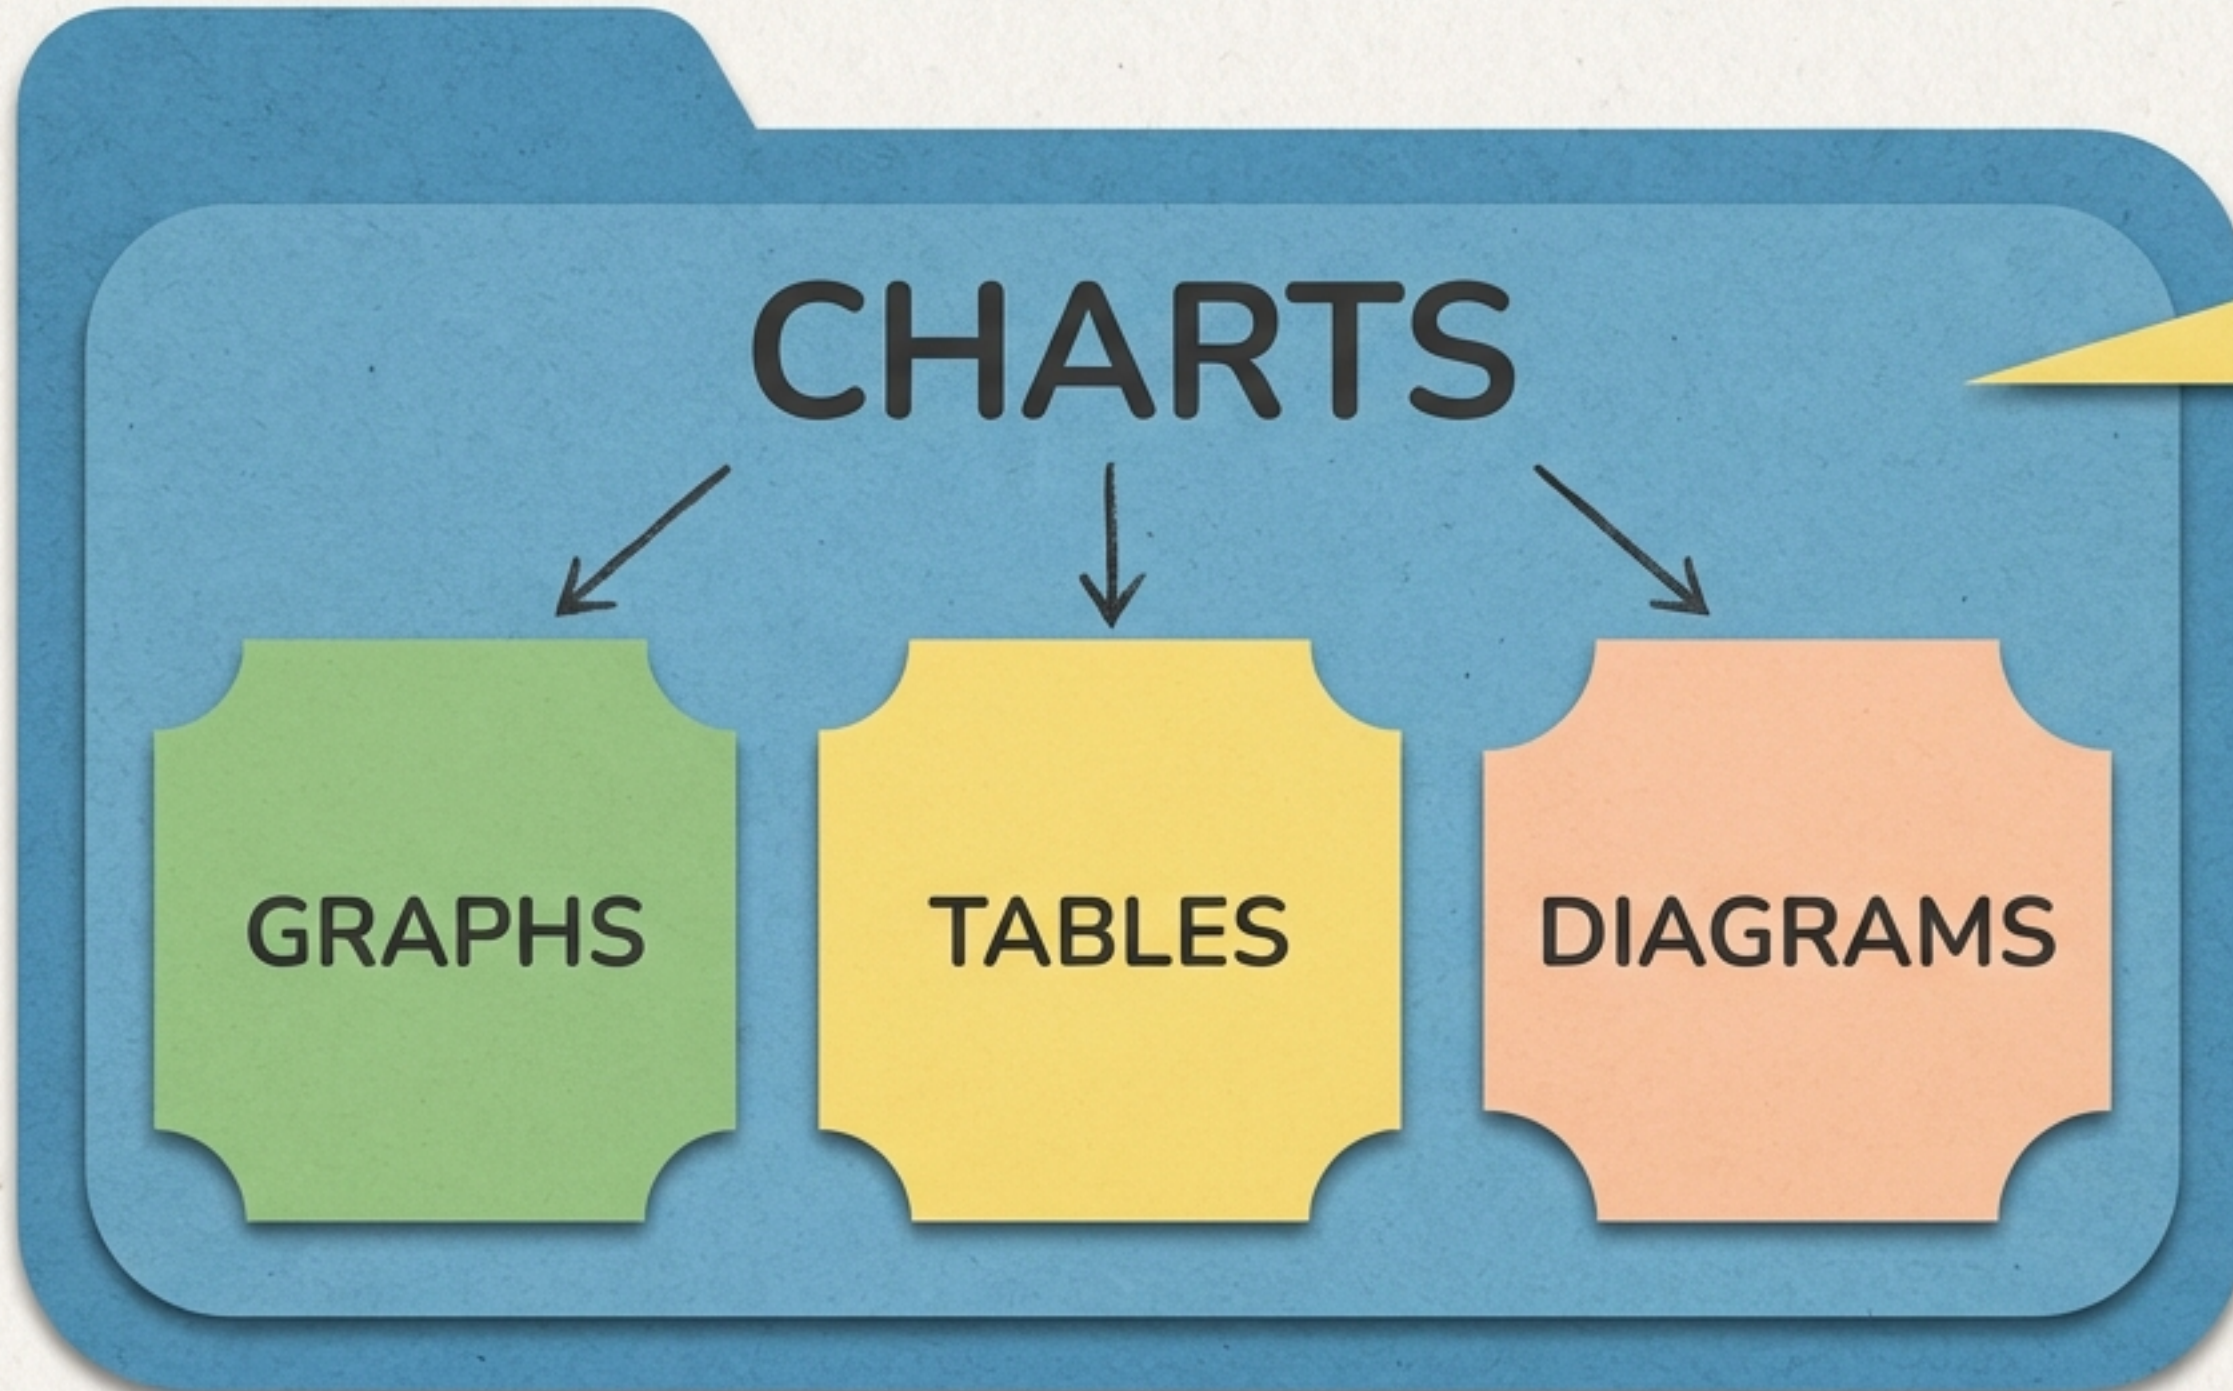

Best for showing Parts of a Whole

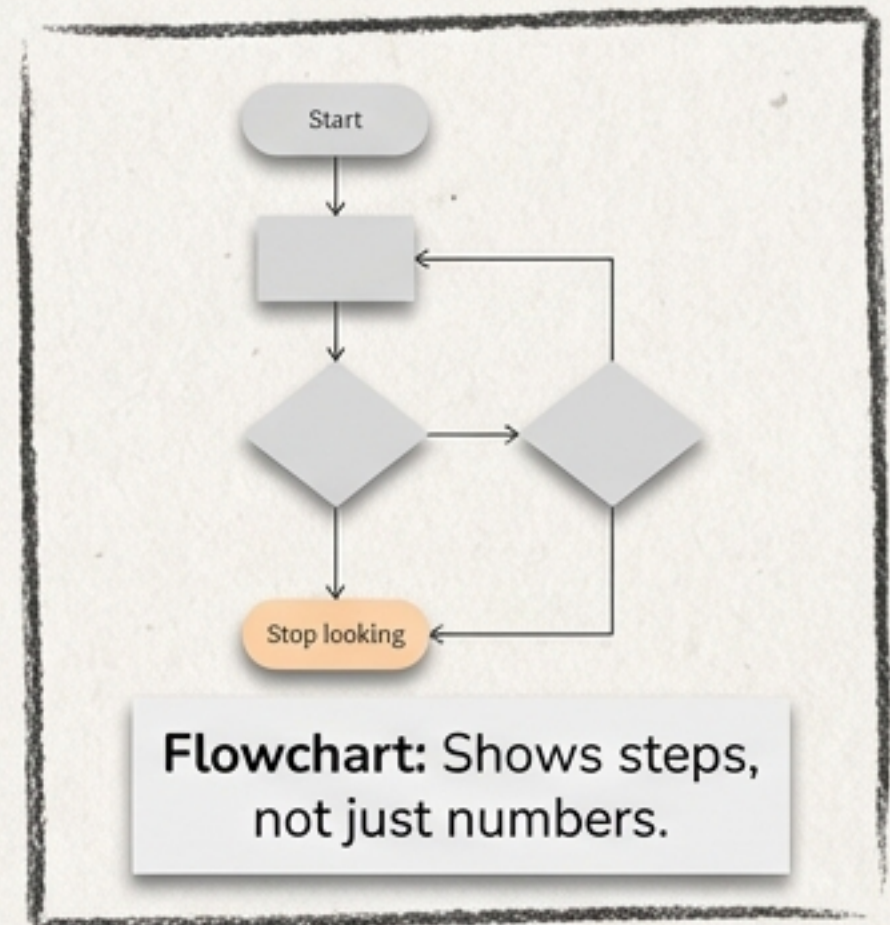

Also called a Circle Graph. Each slice is called a Sector.

# Wait... Is a Chart the same as a Graph?

All Graphs are Charts...  
but not all Charts are  
Graphs!

# Pop Quiz! True or False?

A Pie Chart is also known as a Circle Graph.

TRUE!

A Line Graph is best for counting different animals in a zoo.

FALSE!  
(Use a Bar Graph)

A Spreadsheet helps us store data in rows and columns.

TRUE!

# Activity: The Weather Detective

**The Mission:** We recorded the Dubai temperature for 10 days.

**The Goal:** Create a Line Graph in Excel.

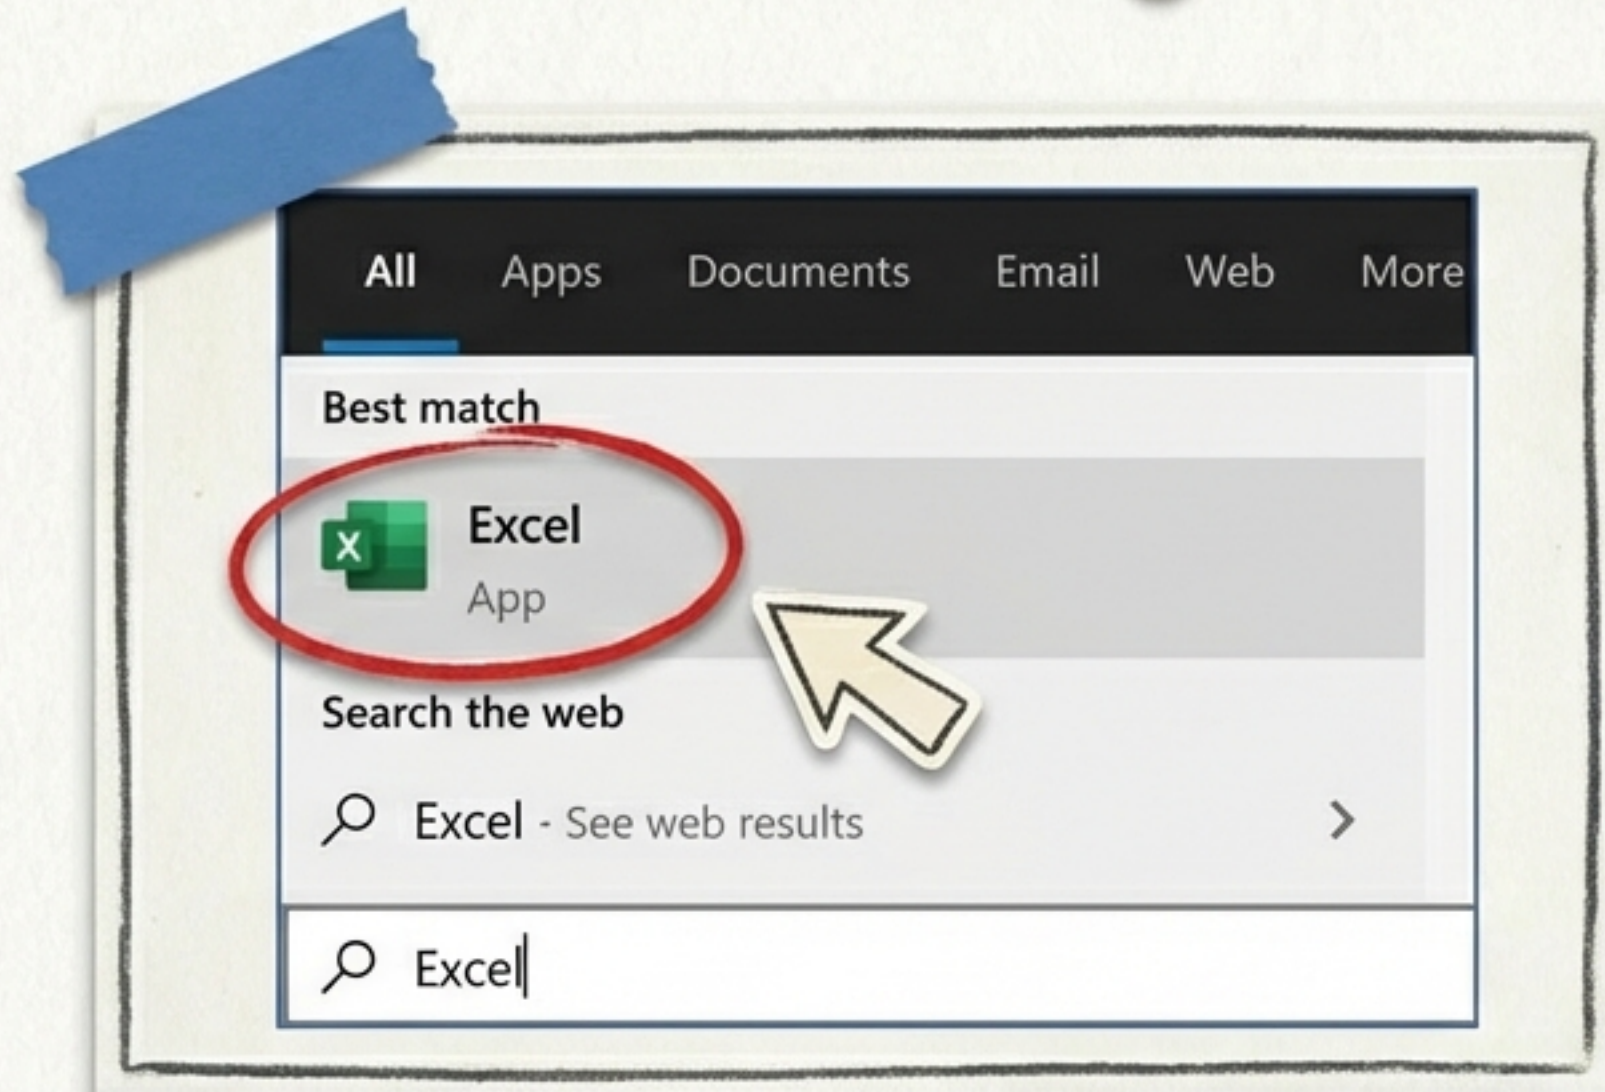

**The Data:**

- July 1: 34 C
- July 5: 38 C
- July 10: 37 C

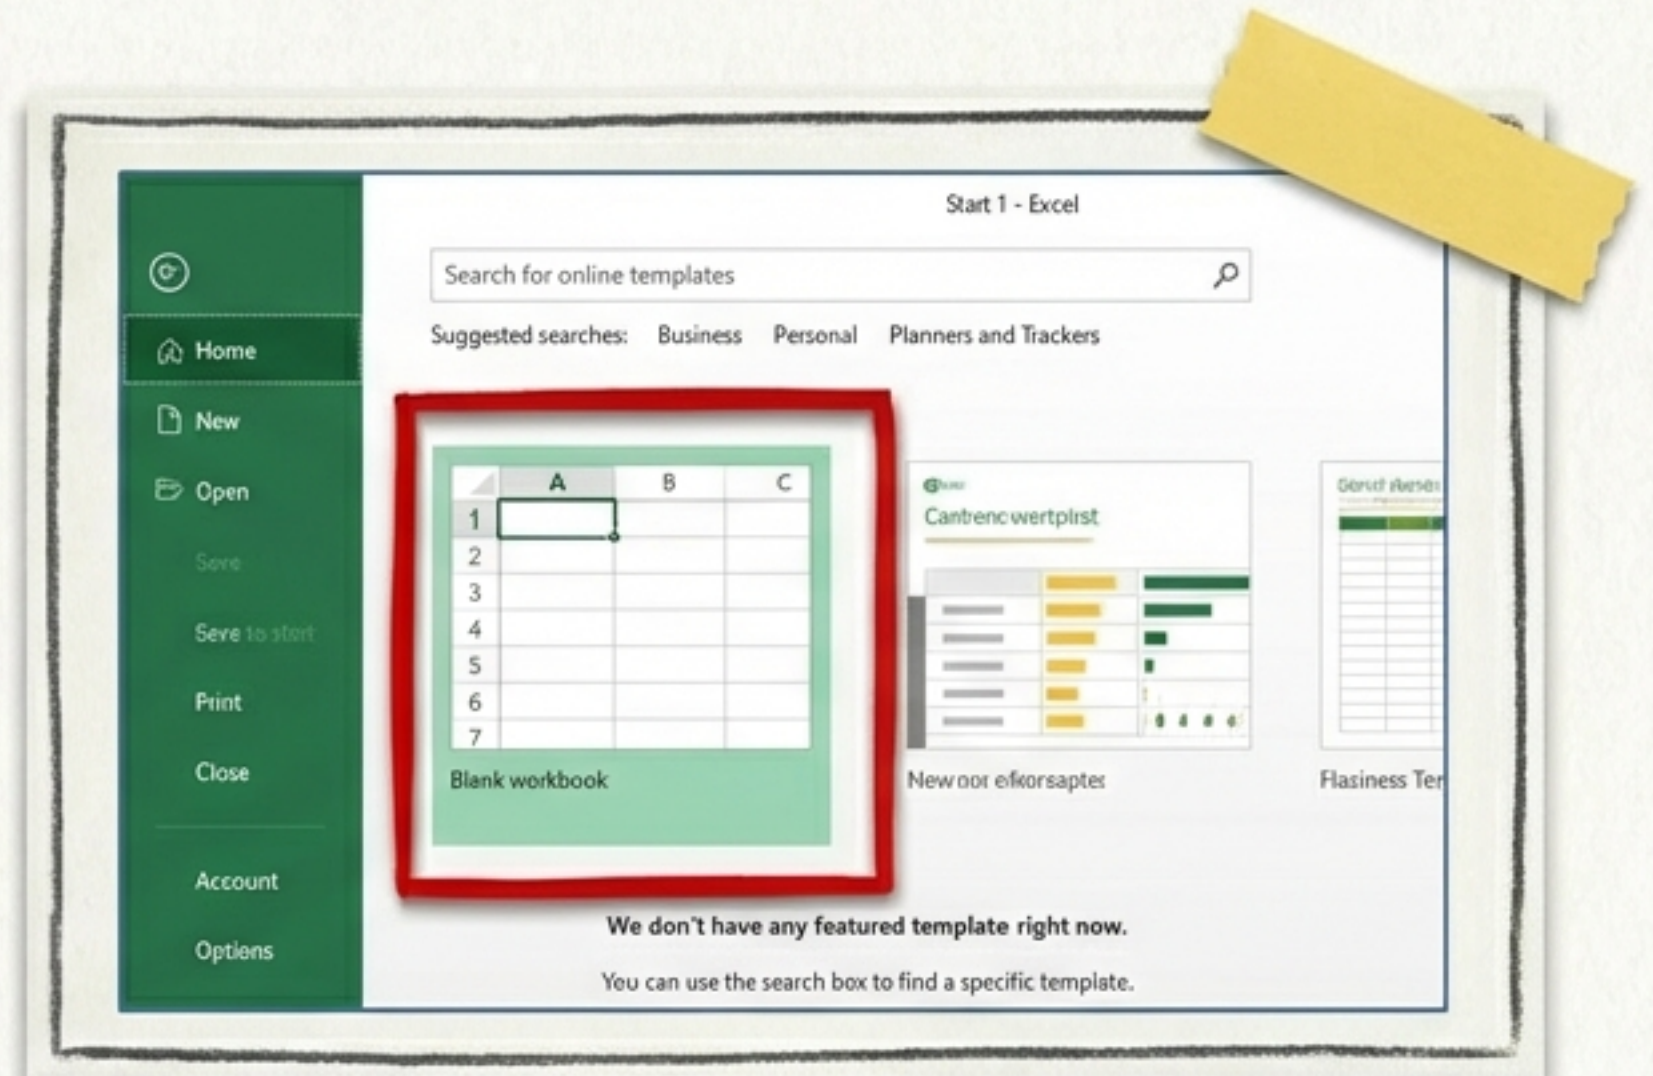

**Let's open Microsoft Excel!**

# Step 1: Open Excel

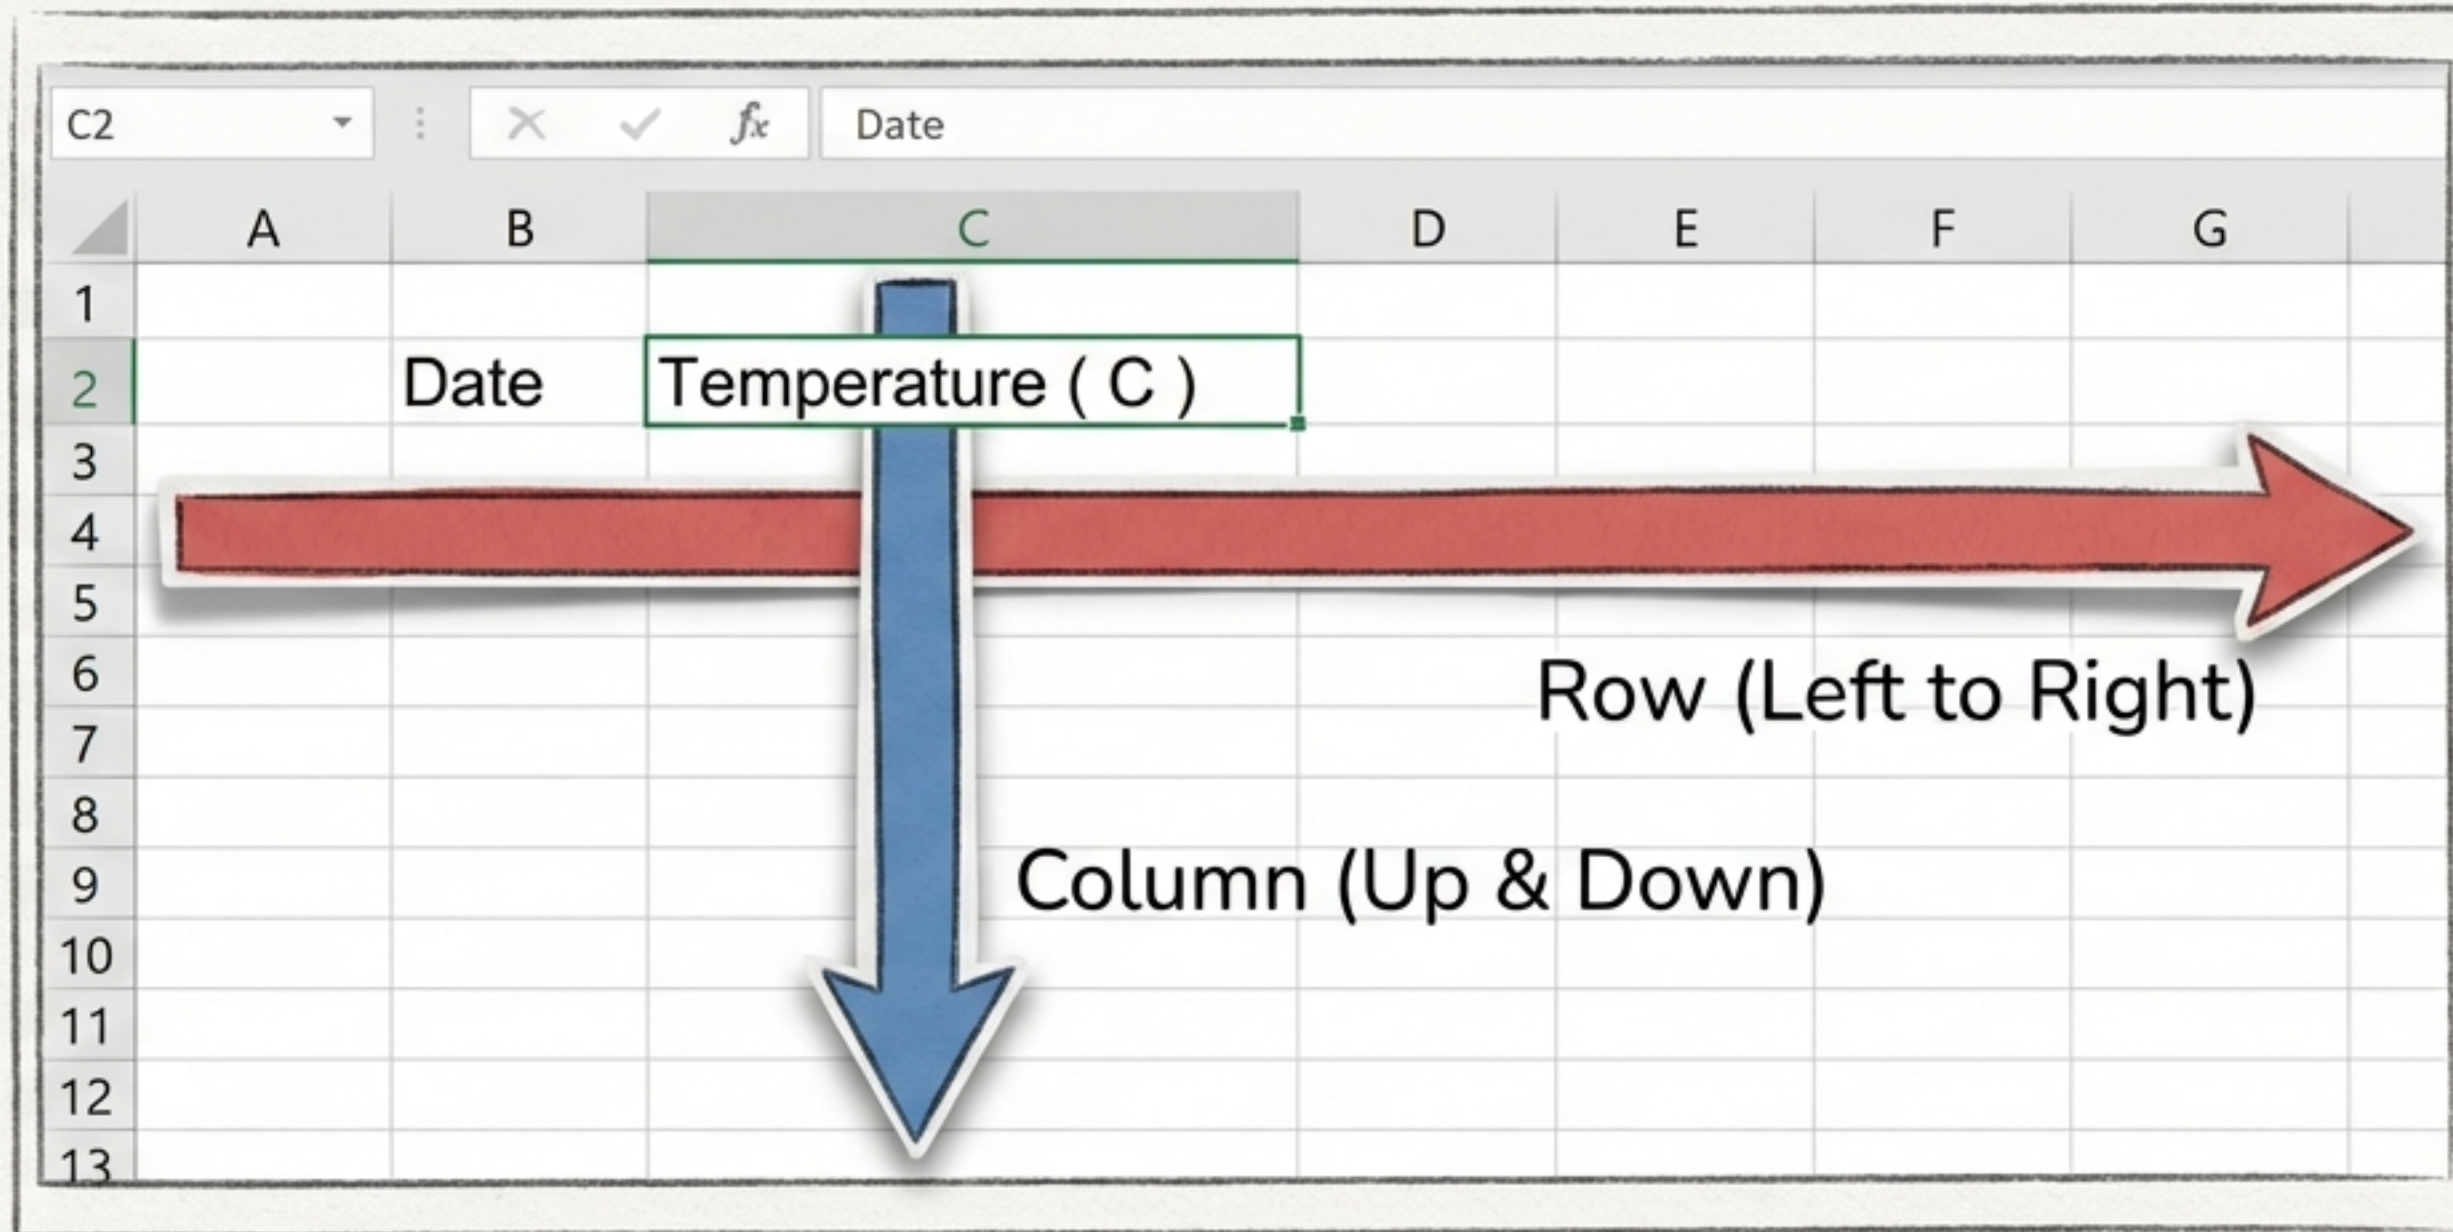

1. Search for “**Excel**” on your computer.

2. Click on “**Blank Workbook**” to start.

# Step 2: Set Up Your Columns

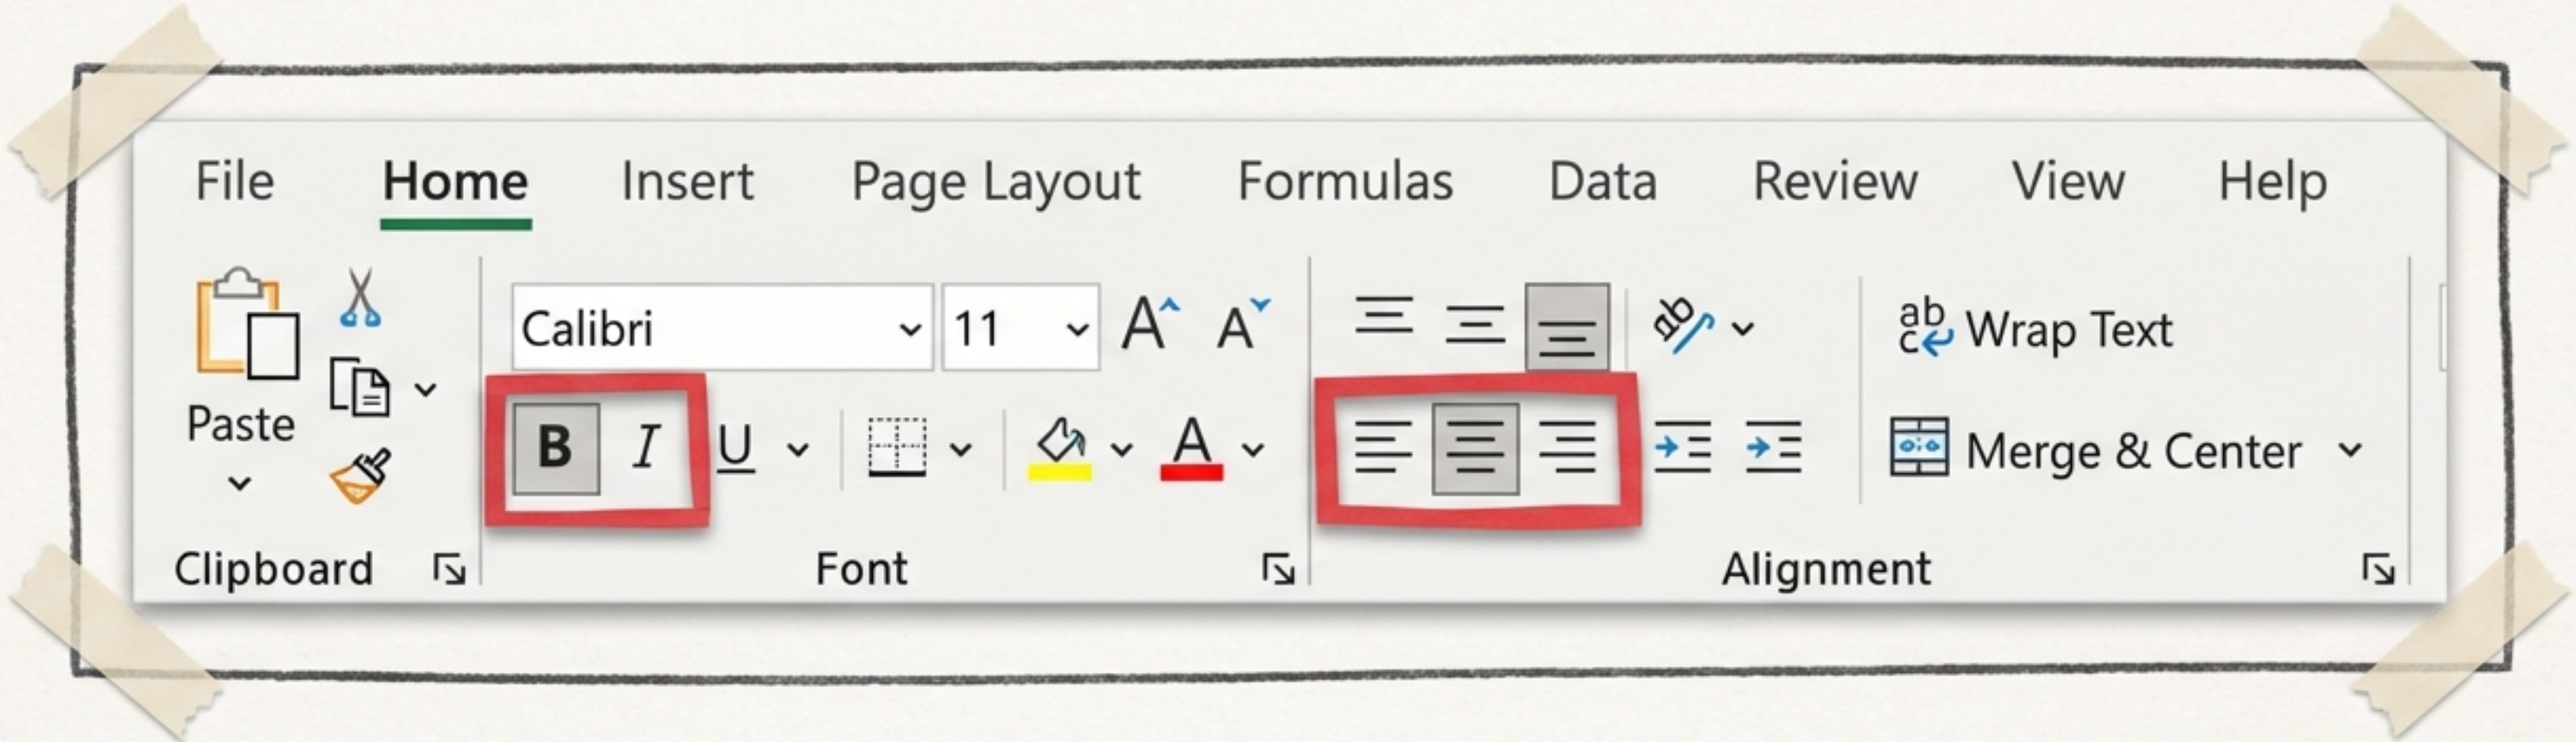

The image shows an Excel spreadsheet with columns A through G and rows 1 through 13. The formula bar at the top shows 'Date' in cell C2. A red arrow points horizontally across row 4, labeled 'Row (Left to Right)'. A blue arrow points vertically down column 3, labeled 'Column (Up & Down)'.

|    | A | B    | C                 | D | E | F | G |
|----|---|------|-------------------|---|---|---|---|
| 1  |   |      |                   |   |   |   |   |
| 2  |   | Date | Temperature ( C ) |   |   |   |   |
| 3  |   |      |                   |   |   |   |   |
| 4  |   |      |                   |   |   |   |   |
| 5  |   |      |                   |   |   |   |   |
| 6  |   |      |                   |   |   |   |   |
| 7  |   |      |                   |   |   |   |   |
| 8  |   |      |                   |   |   |   |   |
| 9  |   |      |                   |   |   |   |   |
| 10 |   |      |                   |   |   |   |   |
| 11 |   |      |                   |   |   |   |   |
| 12 |   |      |                   |   |   |   |   |
| 13 |   |      |                   |   |   |   |   |

In Row 2, type your titles: “Date” and “Temperature ( C )”.

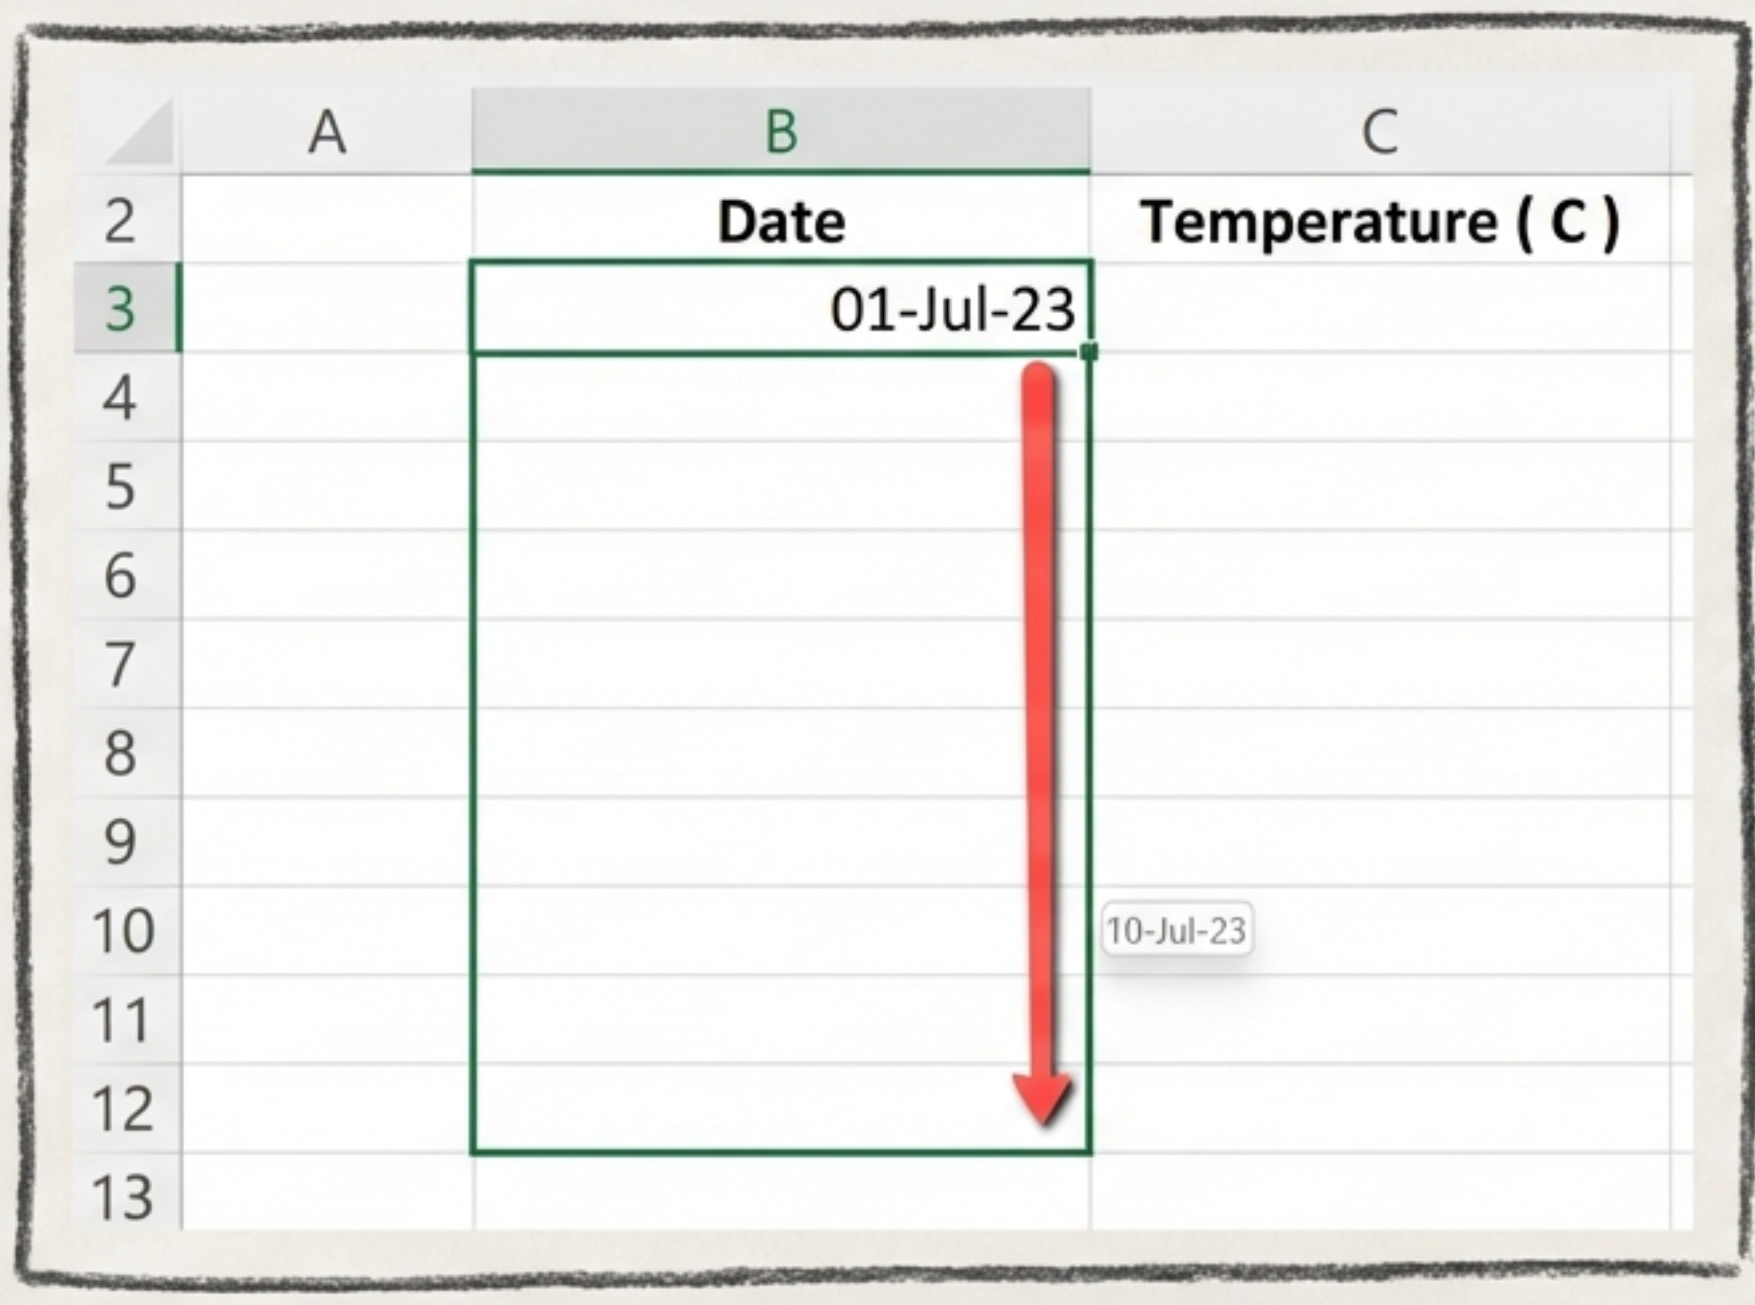

# Step 3: Make it Look Good

- 1. Drag the line between columns to make them wider.
- 2. Select your titles.
- 3. Click **Bold** and **Center** to make them stand out.

# Step 4: The Magic Fill Handle

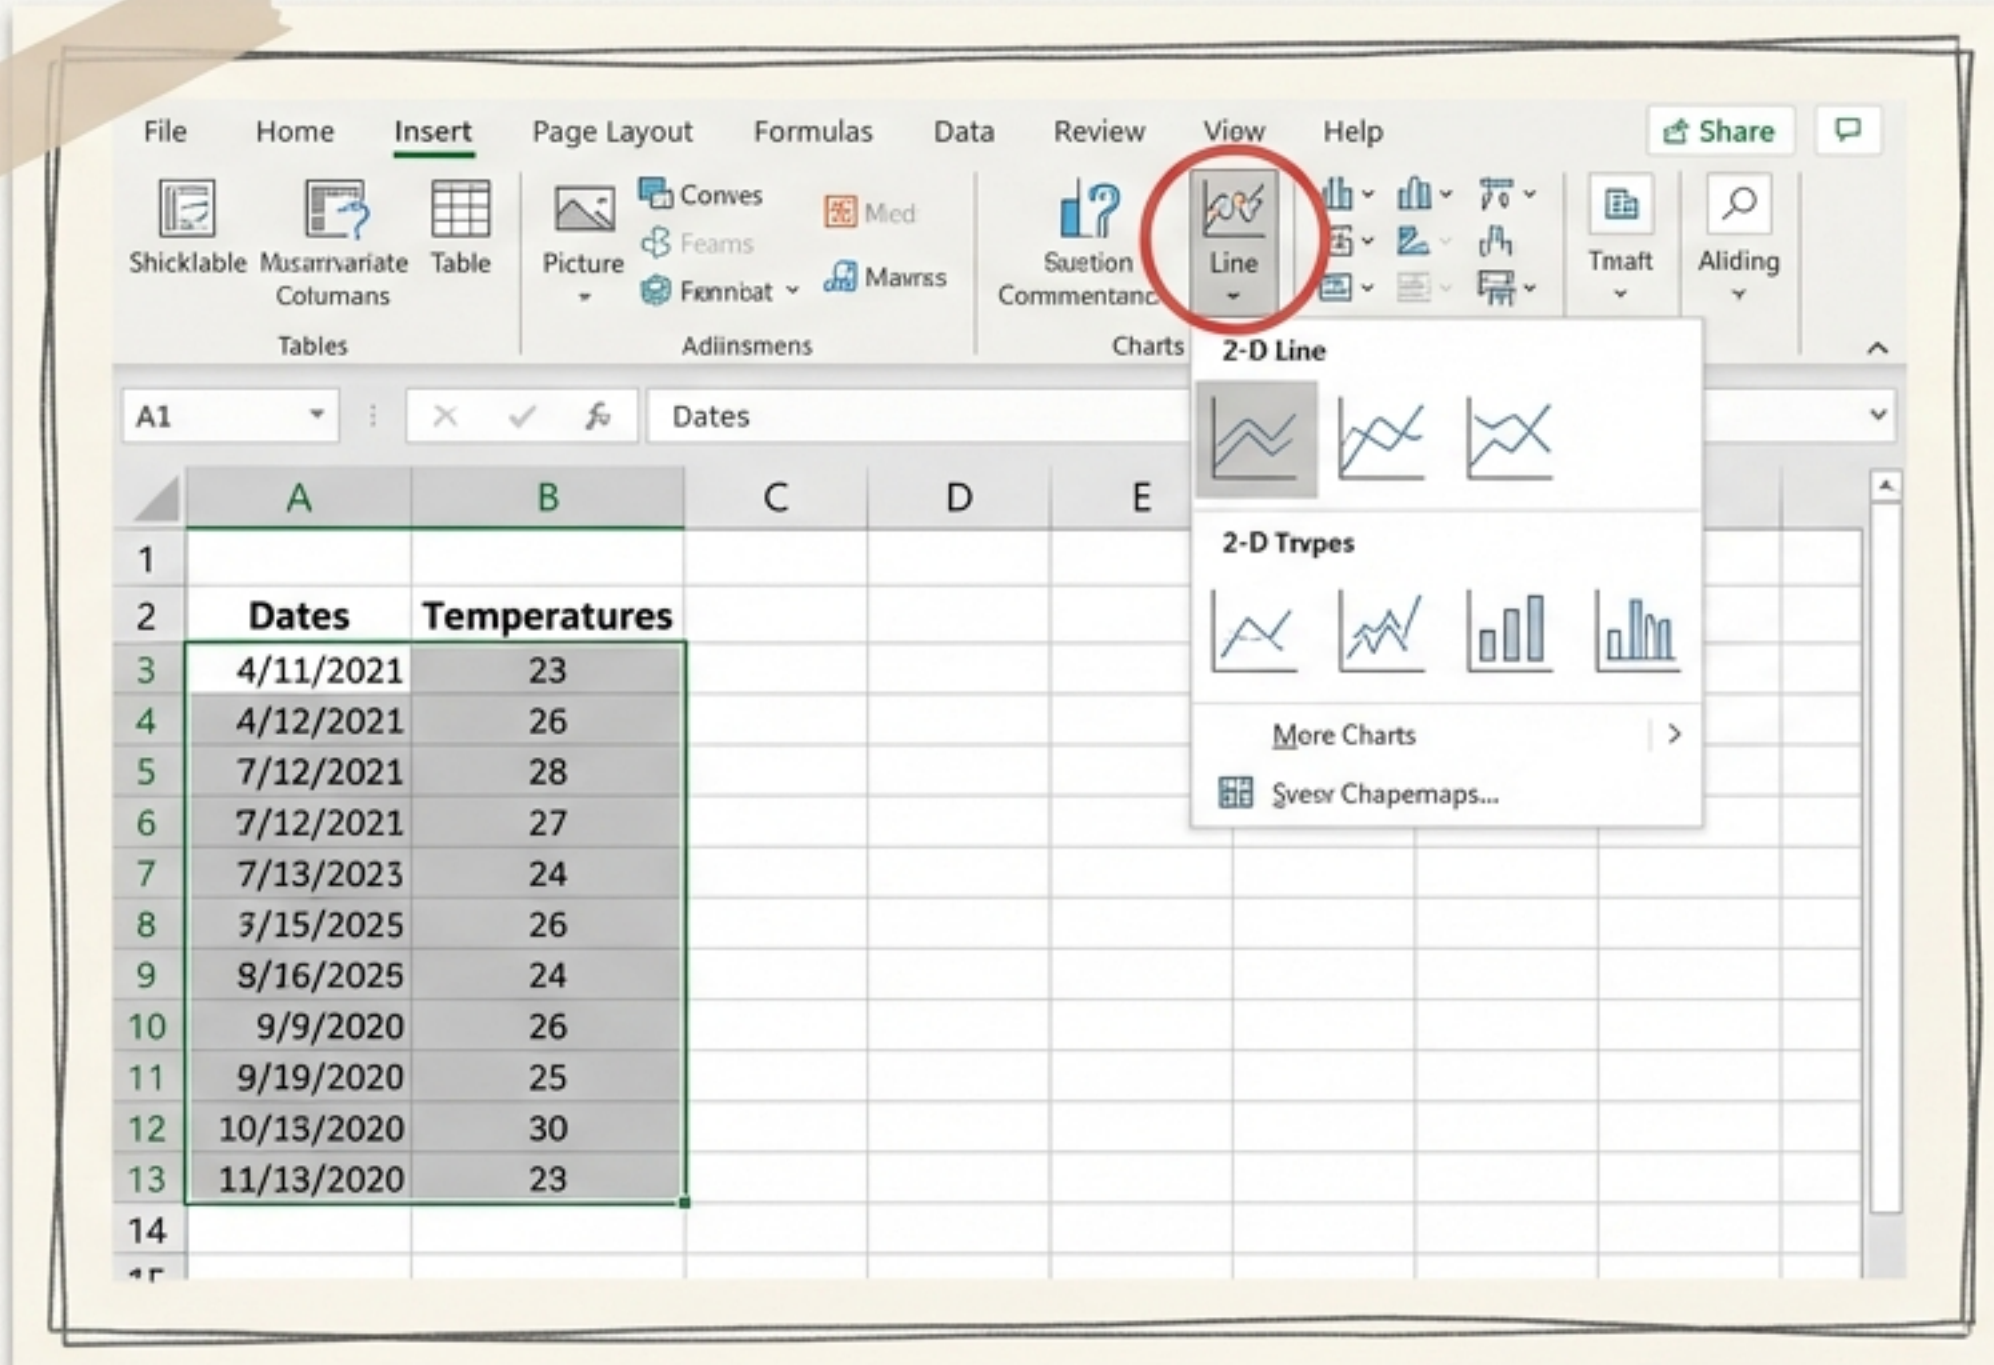

|    | A | B         | C                 |
|----|---|-----------|-------------------|
| 2  |   | Date      | Temperature ( C ) |
| 3  |   | 01-Jul-23 |                   |
| 4  |   |           |                   |
| 5  |   |           |                   |
| 6  |   |           |                   |
| 7  |   |           |                   |
| 8  |   |           |                   |
| 9  |   |           |                   |
| 10 |   |           |                   |
| 11 |   |           |                   |
| 12 |   |           |                   |
| 13 |   |           |                   |

1. Type the first date: 01-Jul-23.
2. Click the bottom right corner (The Fill Handle).
3. Drag it down to create 10 days automatically!
4. Then type in the temperature numbers.

# Step 5: Insert the Graph

1. Select **ALL** your data (Dates and Temperatures).

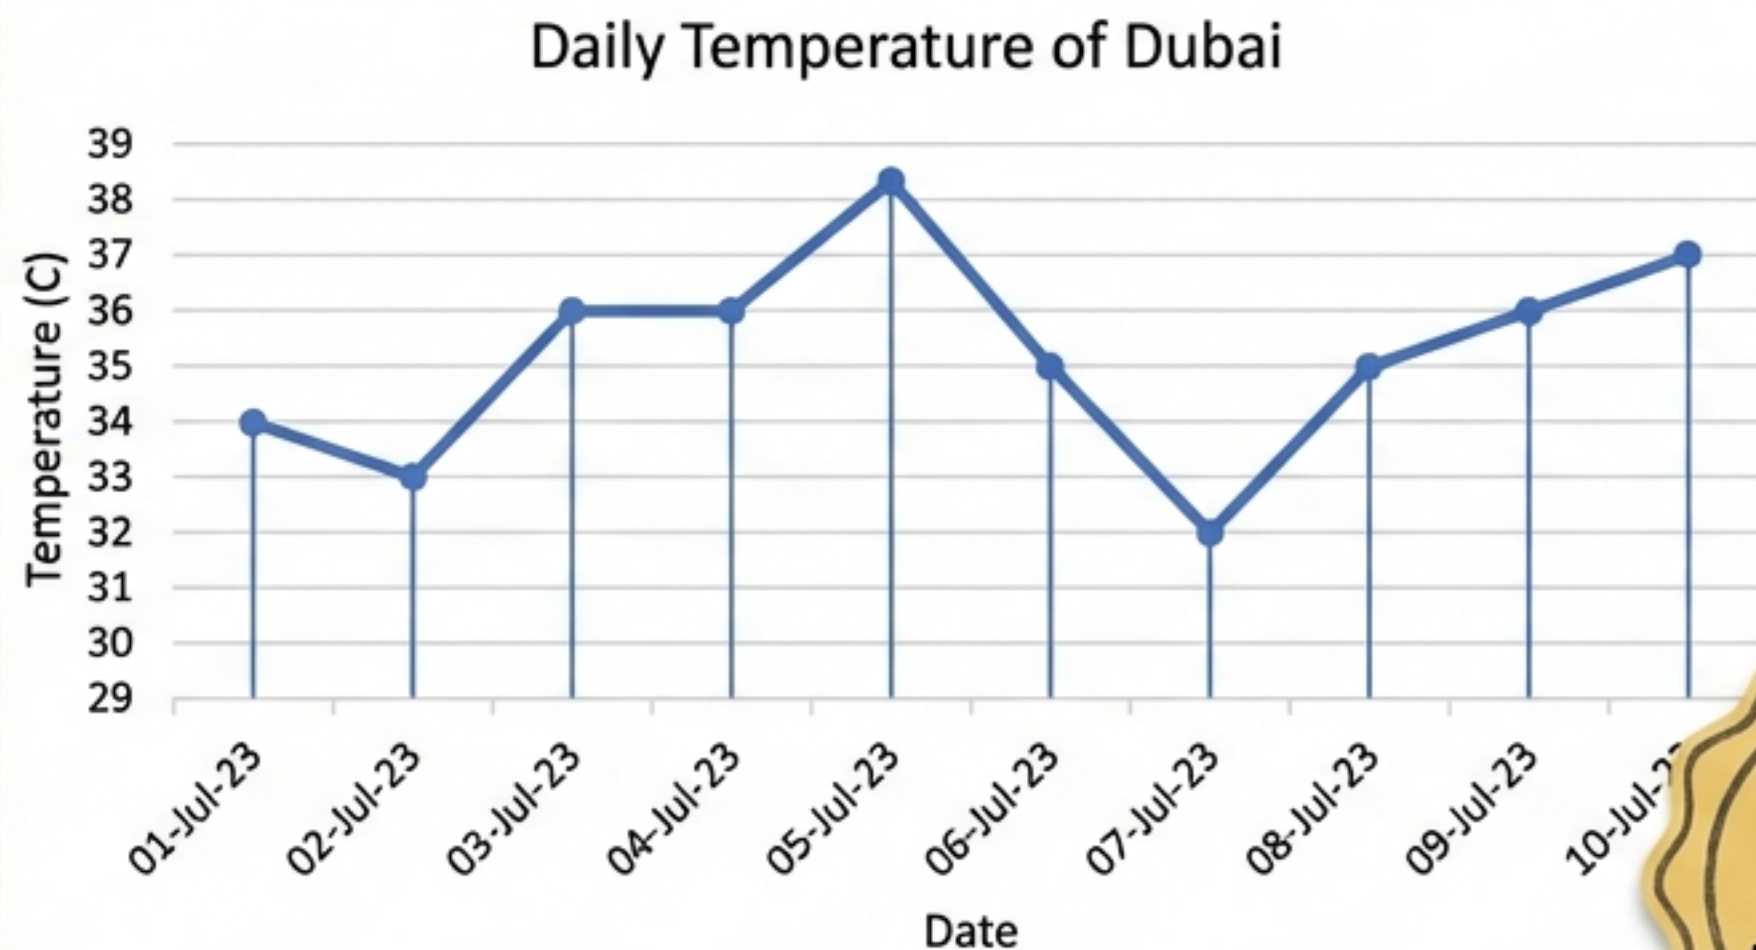

2. Go to the **Insert** tab.

3. Click **Line Graph**.

★ Magic! Your numbers turn into a picture.

# Mission Accomplished!

**Hottest Day:**  
July 5th (38 C)

**Coollest Day:**  
July 7th (32 C)

**Certified  
Data  
Detective**

Great job! You are ready to make your own graphs.
