The World of Audio Editing

Learning to create cool sounds with Audacity

Oh no! The Recording is Ruined!

Meet Kavya. She tried to record a beautiful song.

The Problem: Right in the middle of her song, her dog barked!

The Question: Does she have to sing it all over again?

No! She can use an Audio Editor.

Definition: An Audio Editor is an app that records and fixes sound.

Meet the Tool: Audacity

What is it? Audacity is a popular audio editor that is free to use.

What can it do?

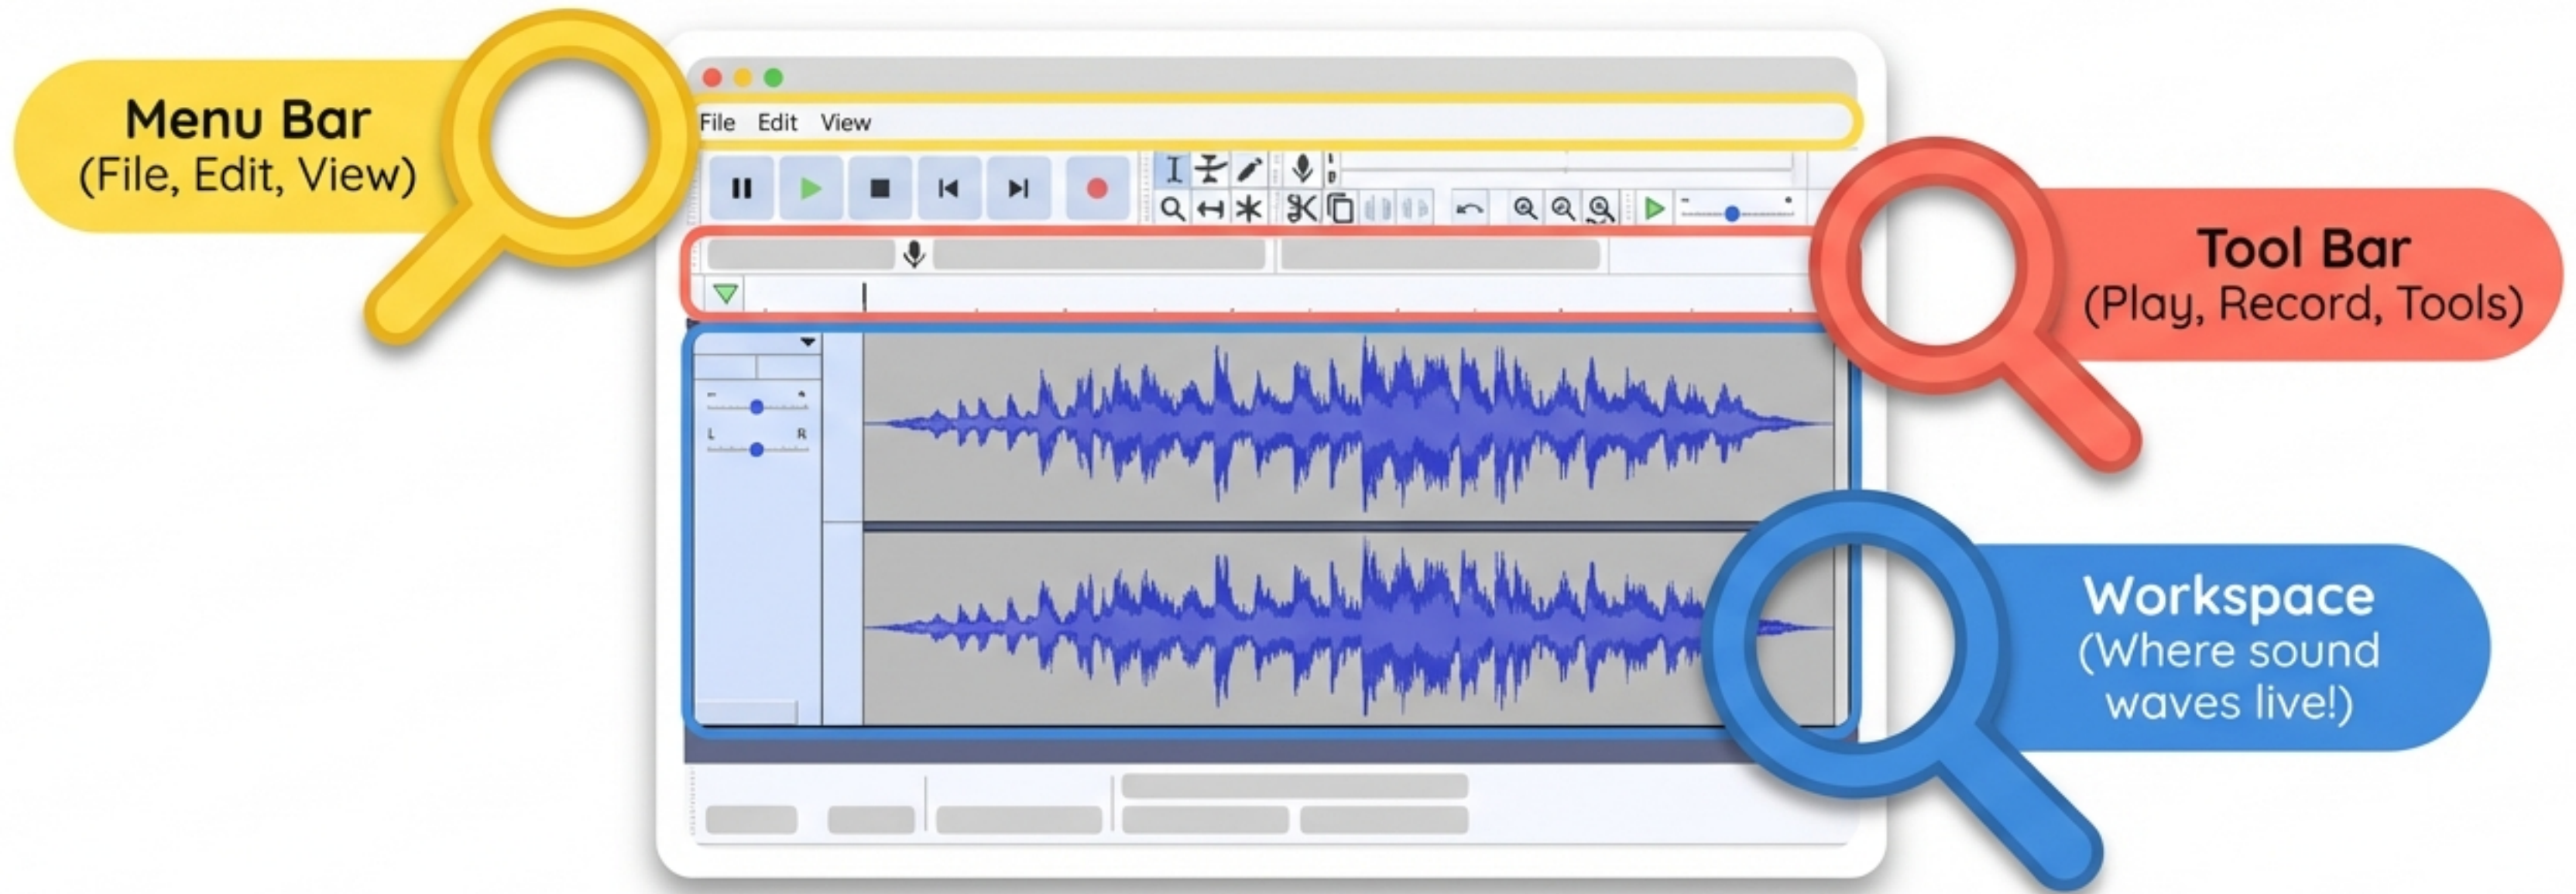

- Record sound (save it digitally)
- Cut out mistakes (like a dog barking!)
- Join different sounds together

Healthy Practice: Always ask an adult for help when downloading and installing new software!

Tour the Dashboard

When you open Audacity, you will see these main areas:

Getting Ready: Mono vs. Stereo

Mono Sound

Sound comes from ONE channel.

- 💡 Tip: Great for voice recording!

Stereo Sound

Sound comes from TWO channels (Left & Right).

Before we record, we must choose a Channel!

The Remote Control

The Transport Toolbar controls your audio like a TV remote.

Pause: Take a short break.

Play: Listen to your audio.

Stop: Stop playing or recording.

Skip to Start: Go back to the beginning.

Skip to End: Jump to the finish.

Record: Start catching sound!

Step 1: Let's Record!

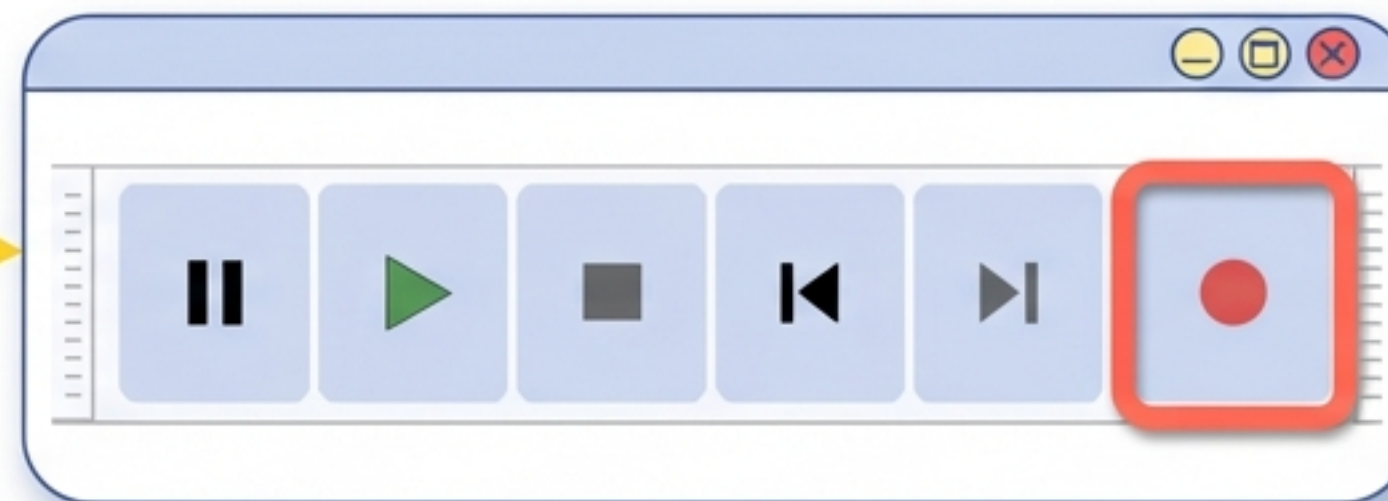

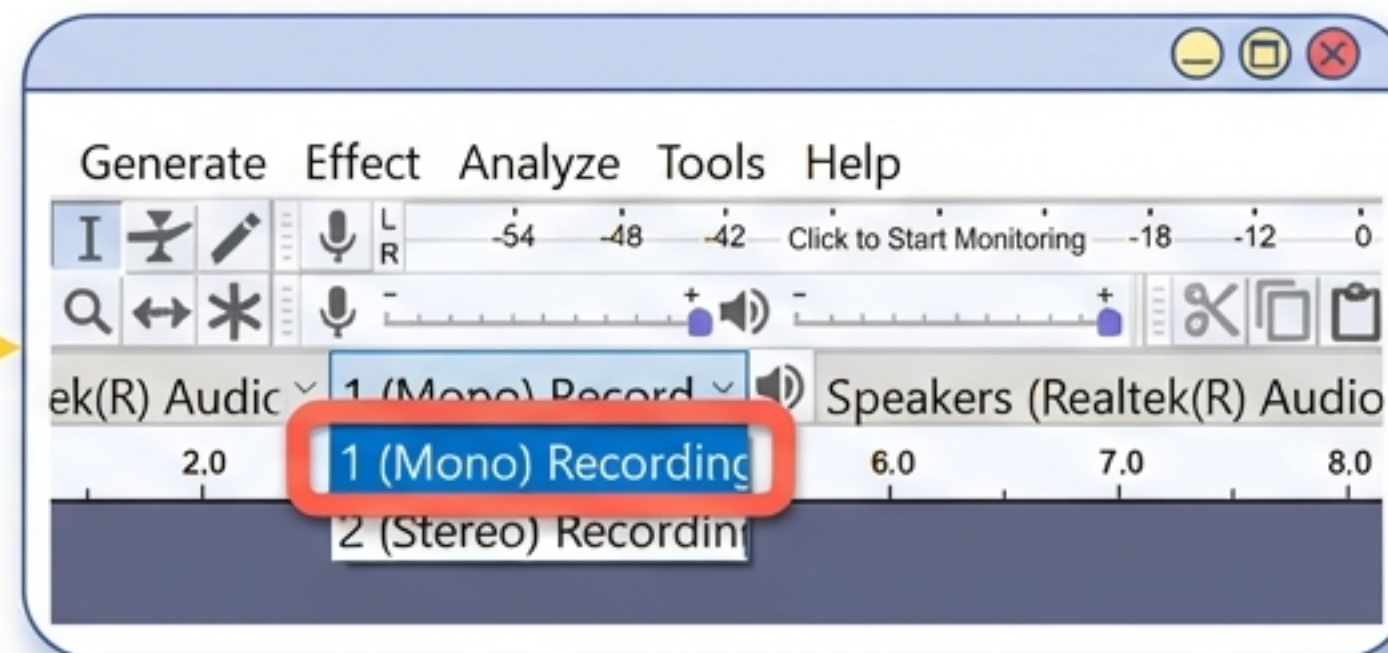

1. Connect your microphone.

2. Important: Select '1 (Mono) Recording' in the toolbar.

3. Click the Red Record Button.

4. Sing your song! 🎤

5. Click the Stop Button when finished.

Step 2: Delete the Mistake

Did the dog bark? Let's fix it!

Gone! Now the song is clean.

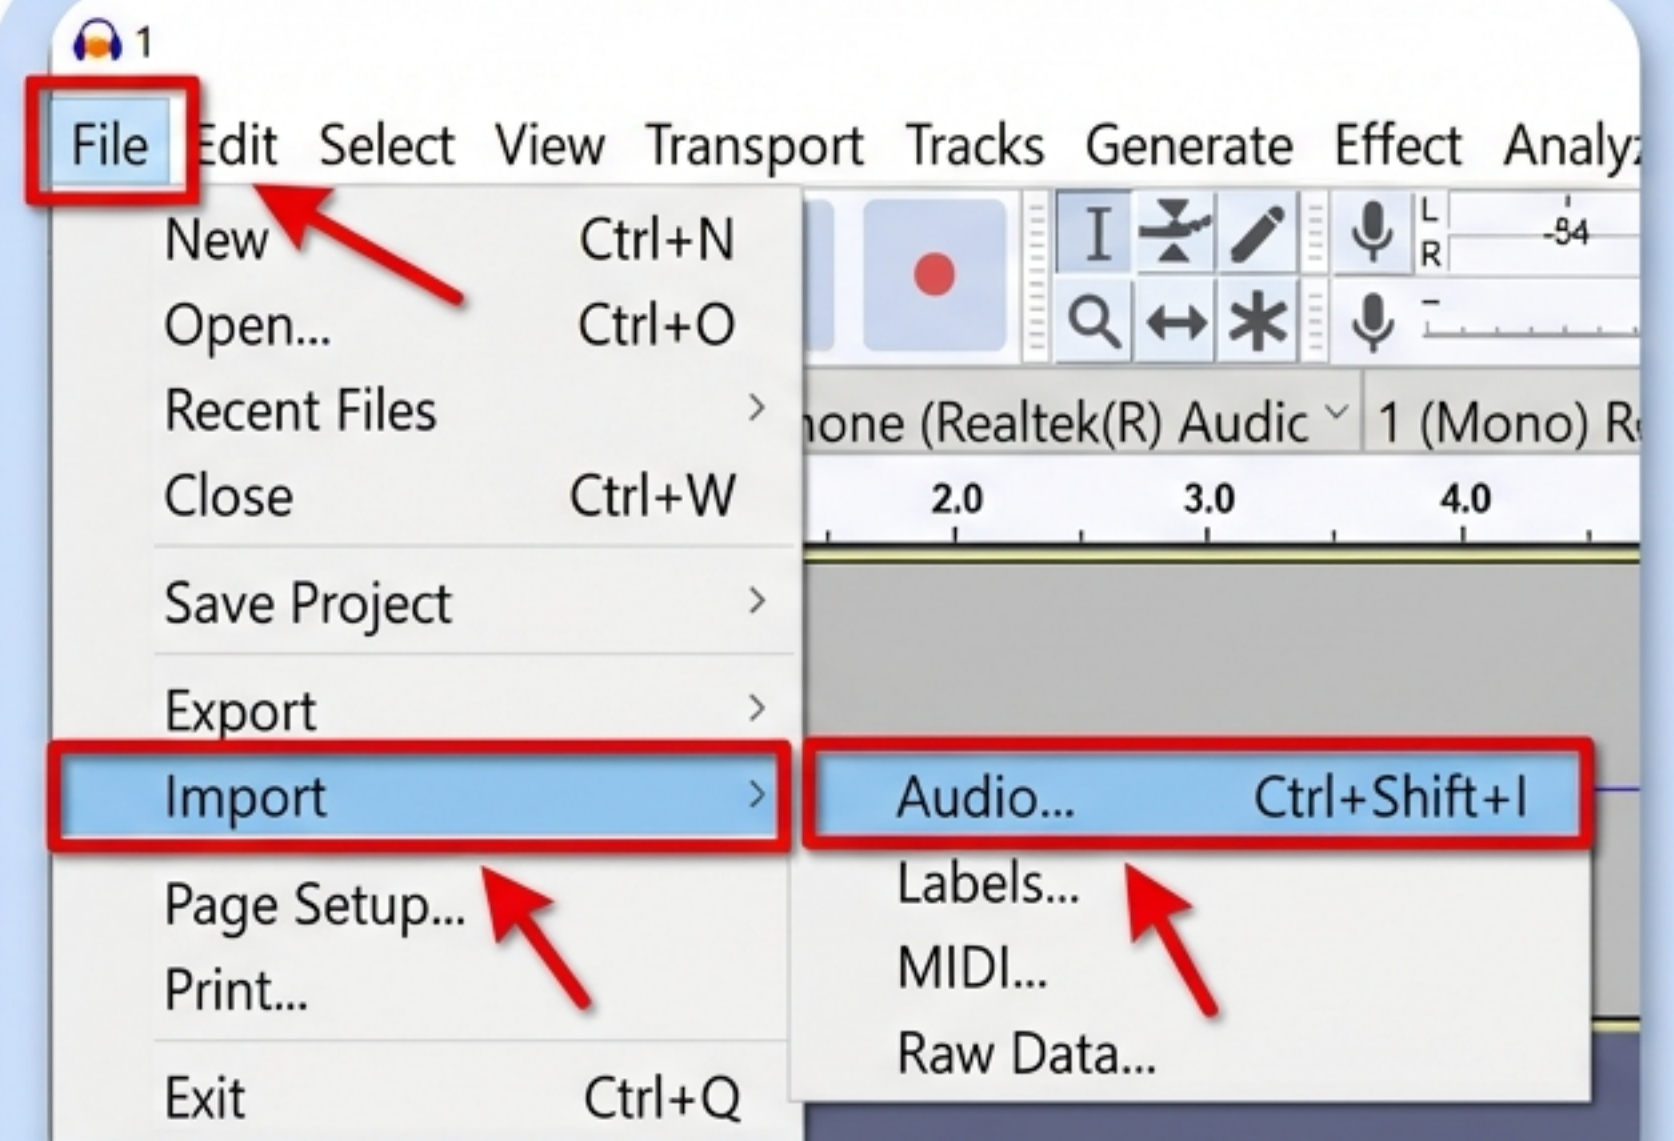

Step 3: Add Background Music

The singing is great, but let's make it sound like a real song.

Import: Adding an outside file to your project.

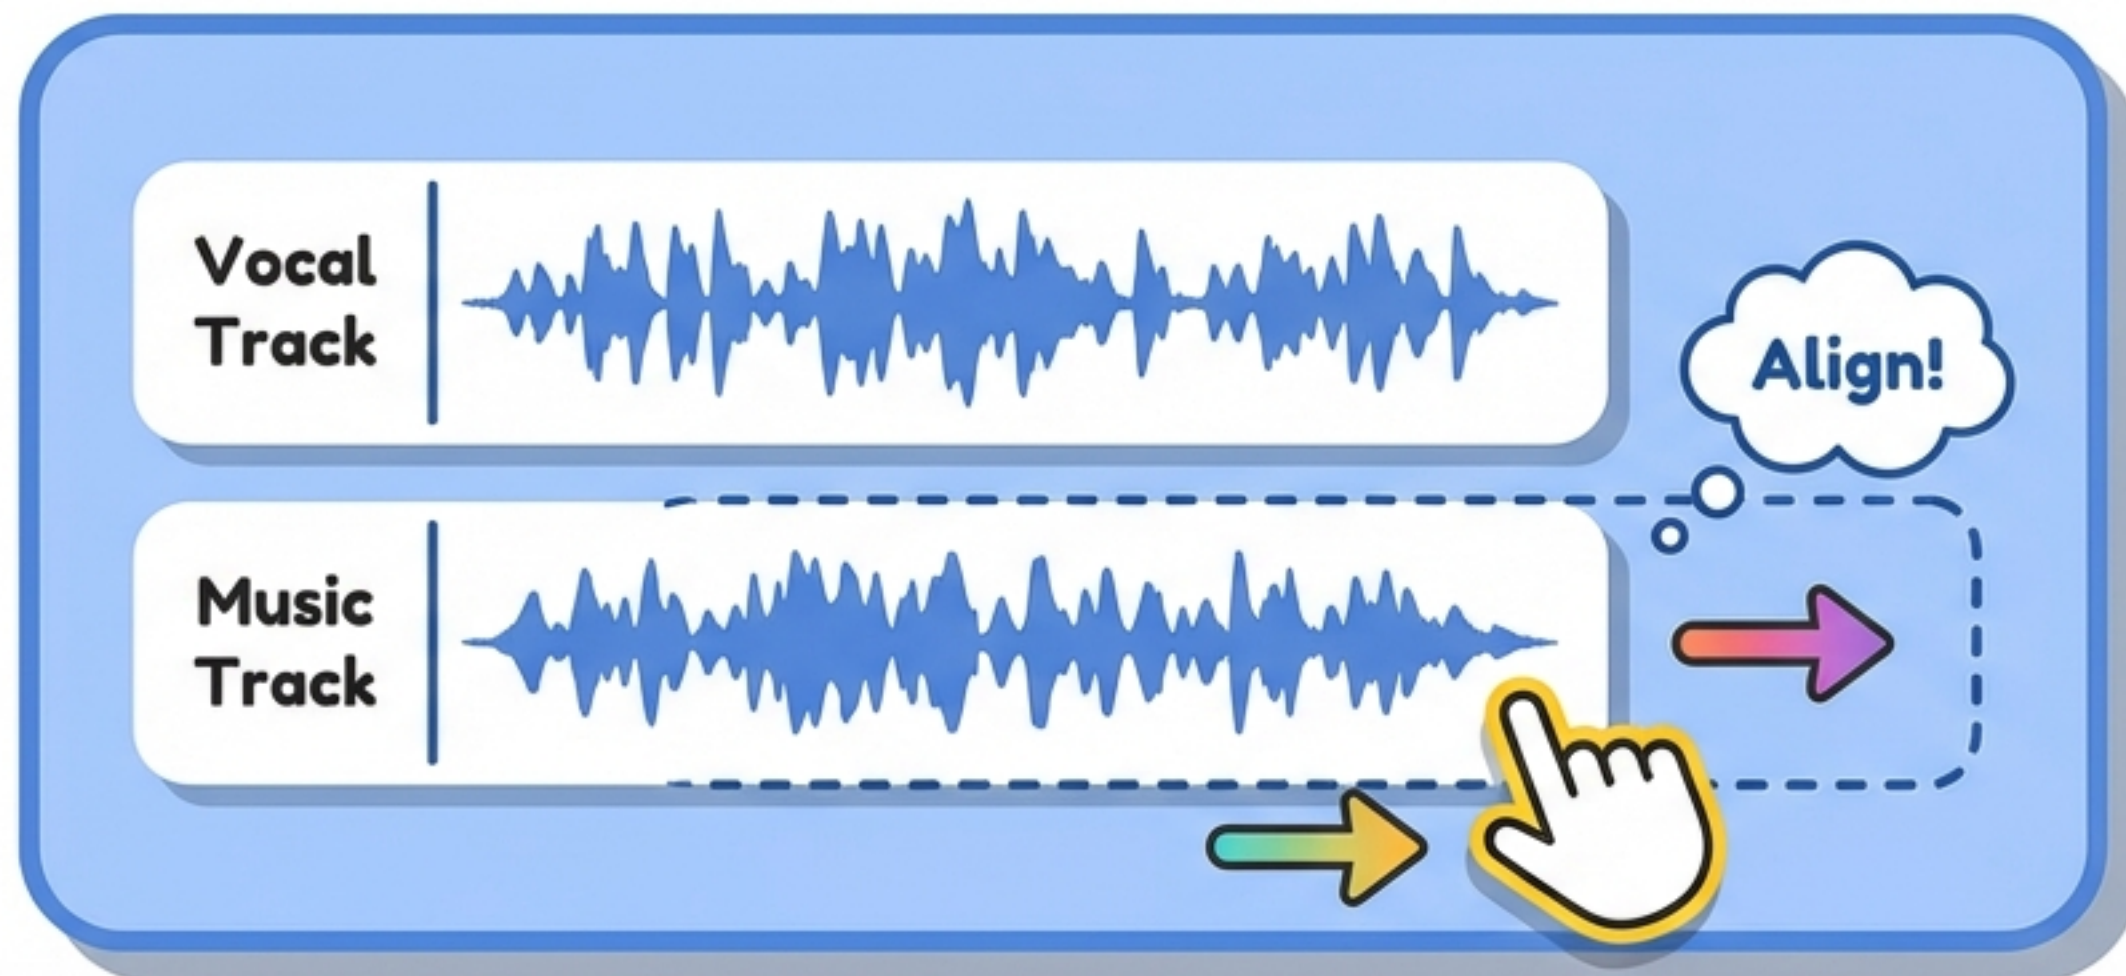

How to do it:

- 1. Click File > Import > Audio.**
- 2. Choose a music file from your computer.**

Step 4: Perfect Timing

Use the Time Shift Tool

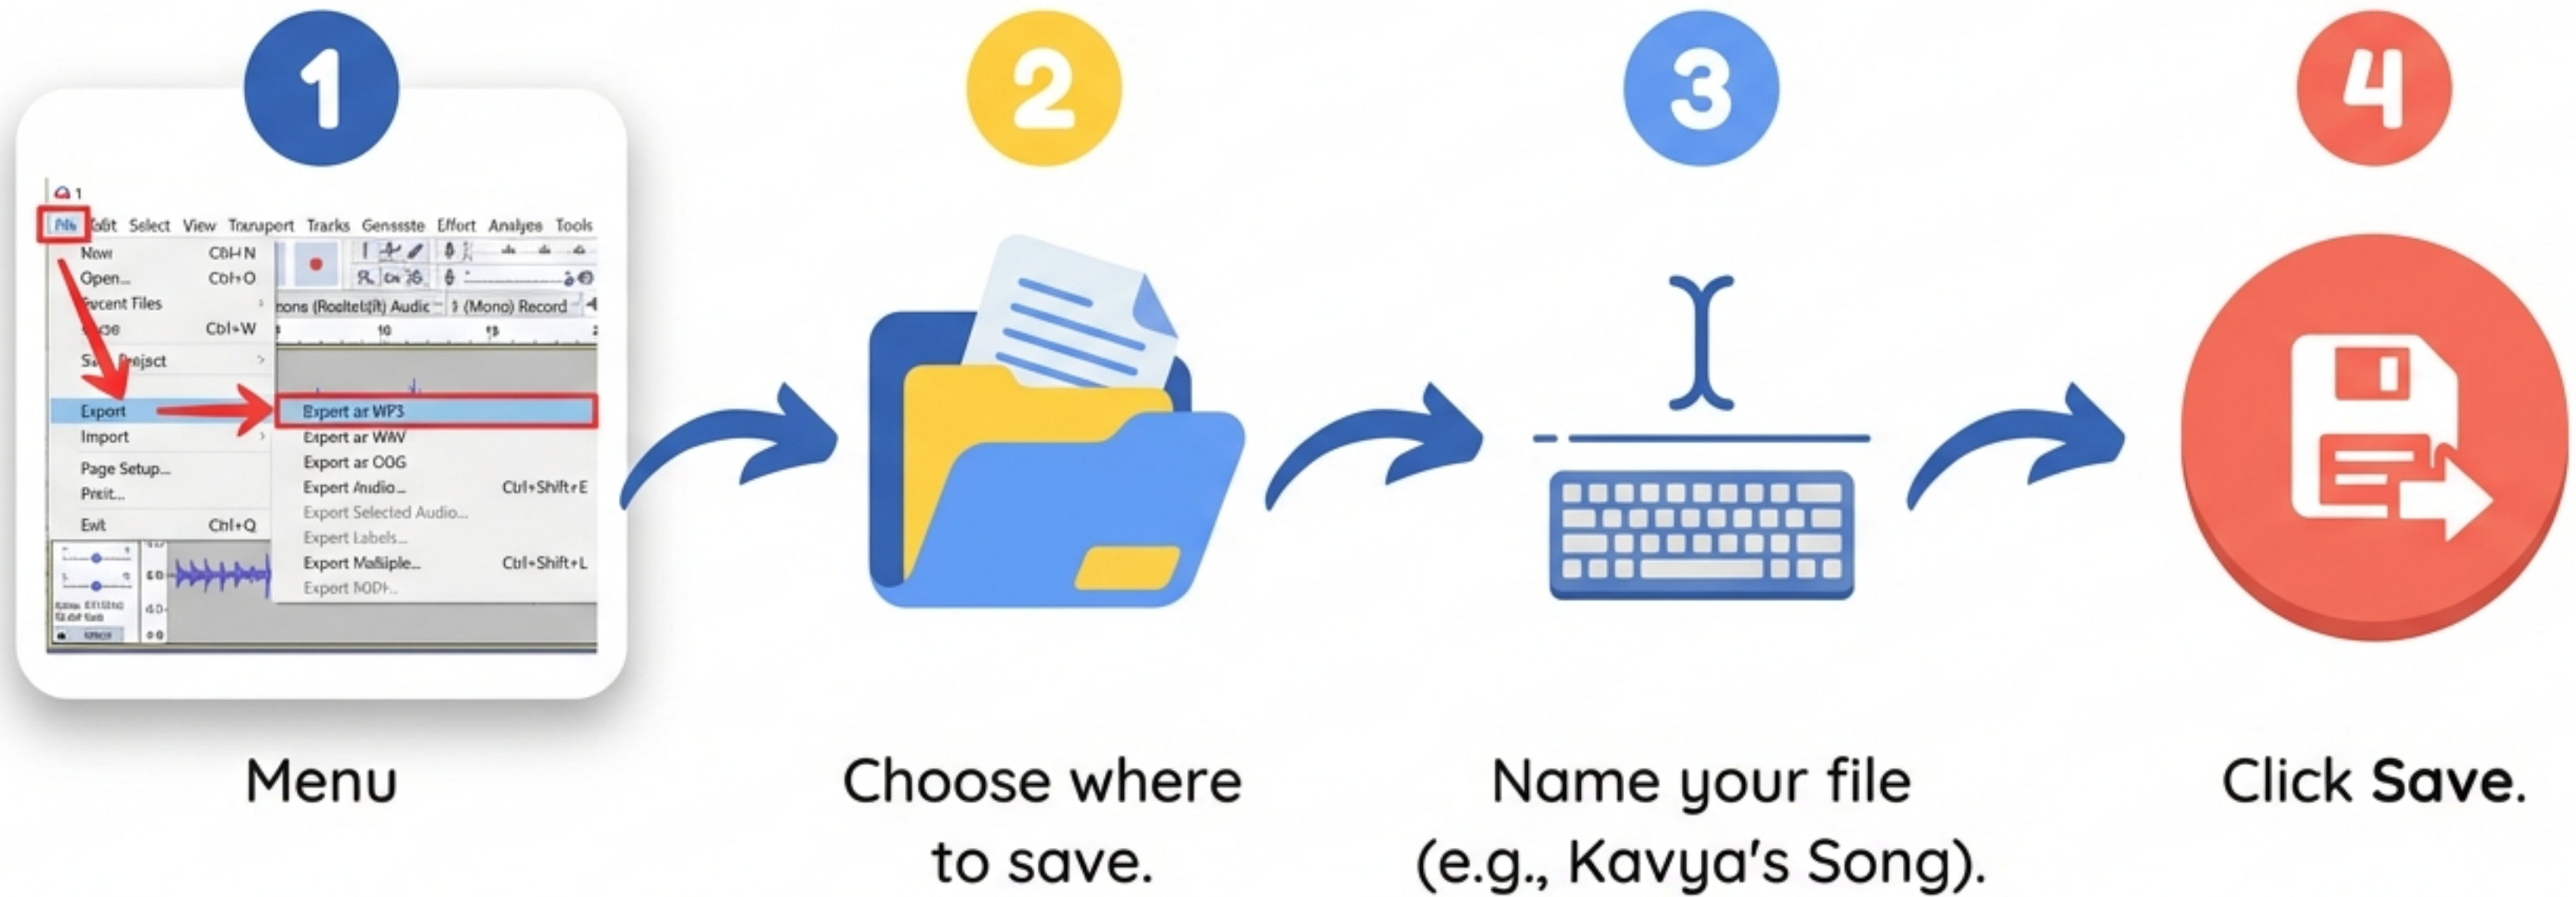

Does the music start too early? Move it!

1. Click the Time Shift Tool.

2. Drag the music track left or right to match your singing.

Step 5: Save and Share (Export)

Export: Converting your project into a file you can play on any phone or computer.
