

Spreadsheet Formulas

ICT 360 - Grade 4

Let's organize our data!

The Challenge: The Flower Shop

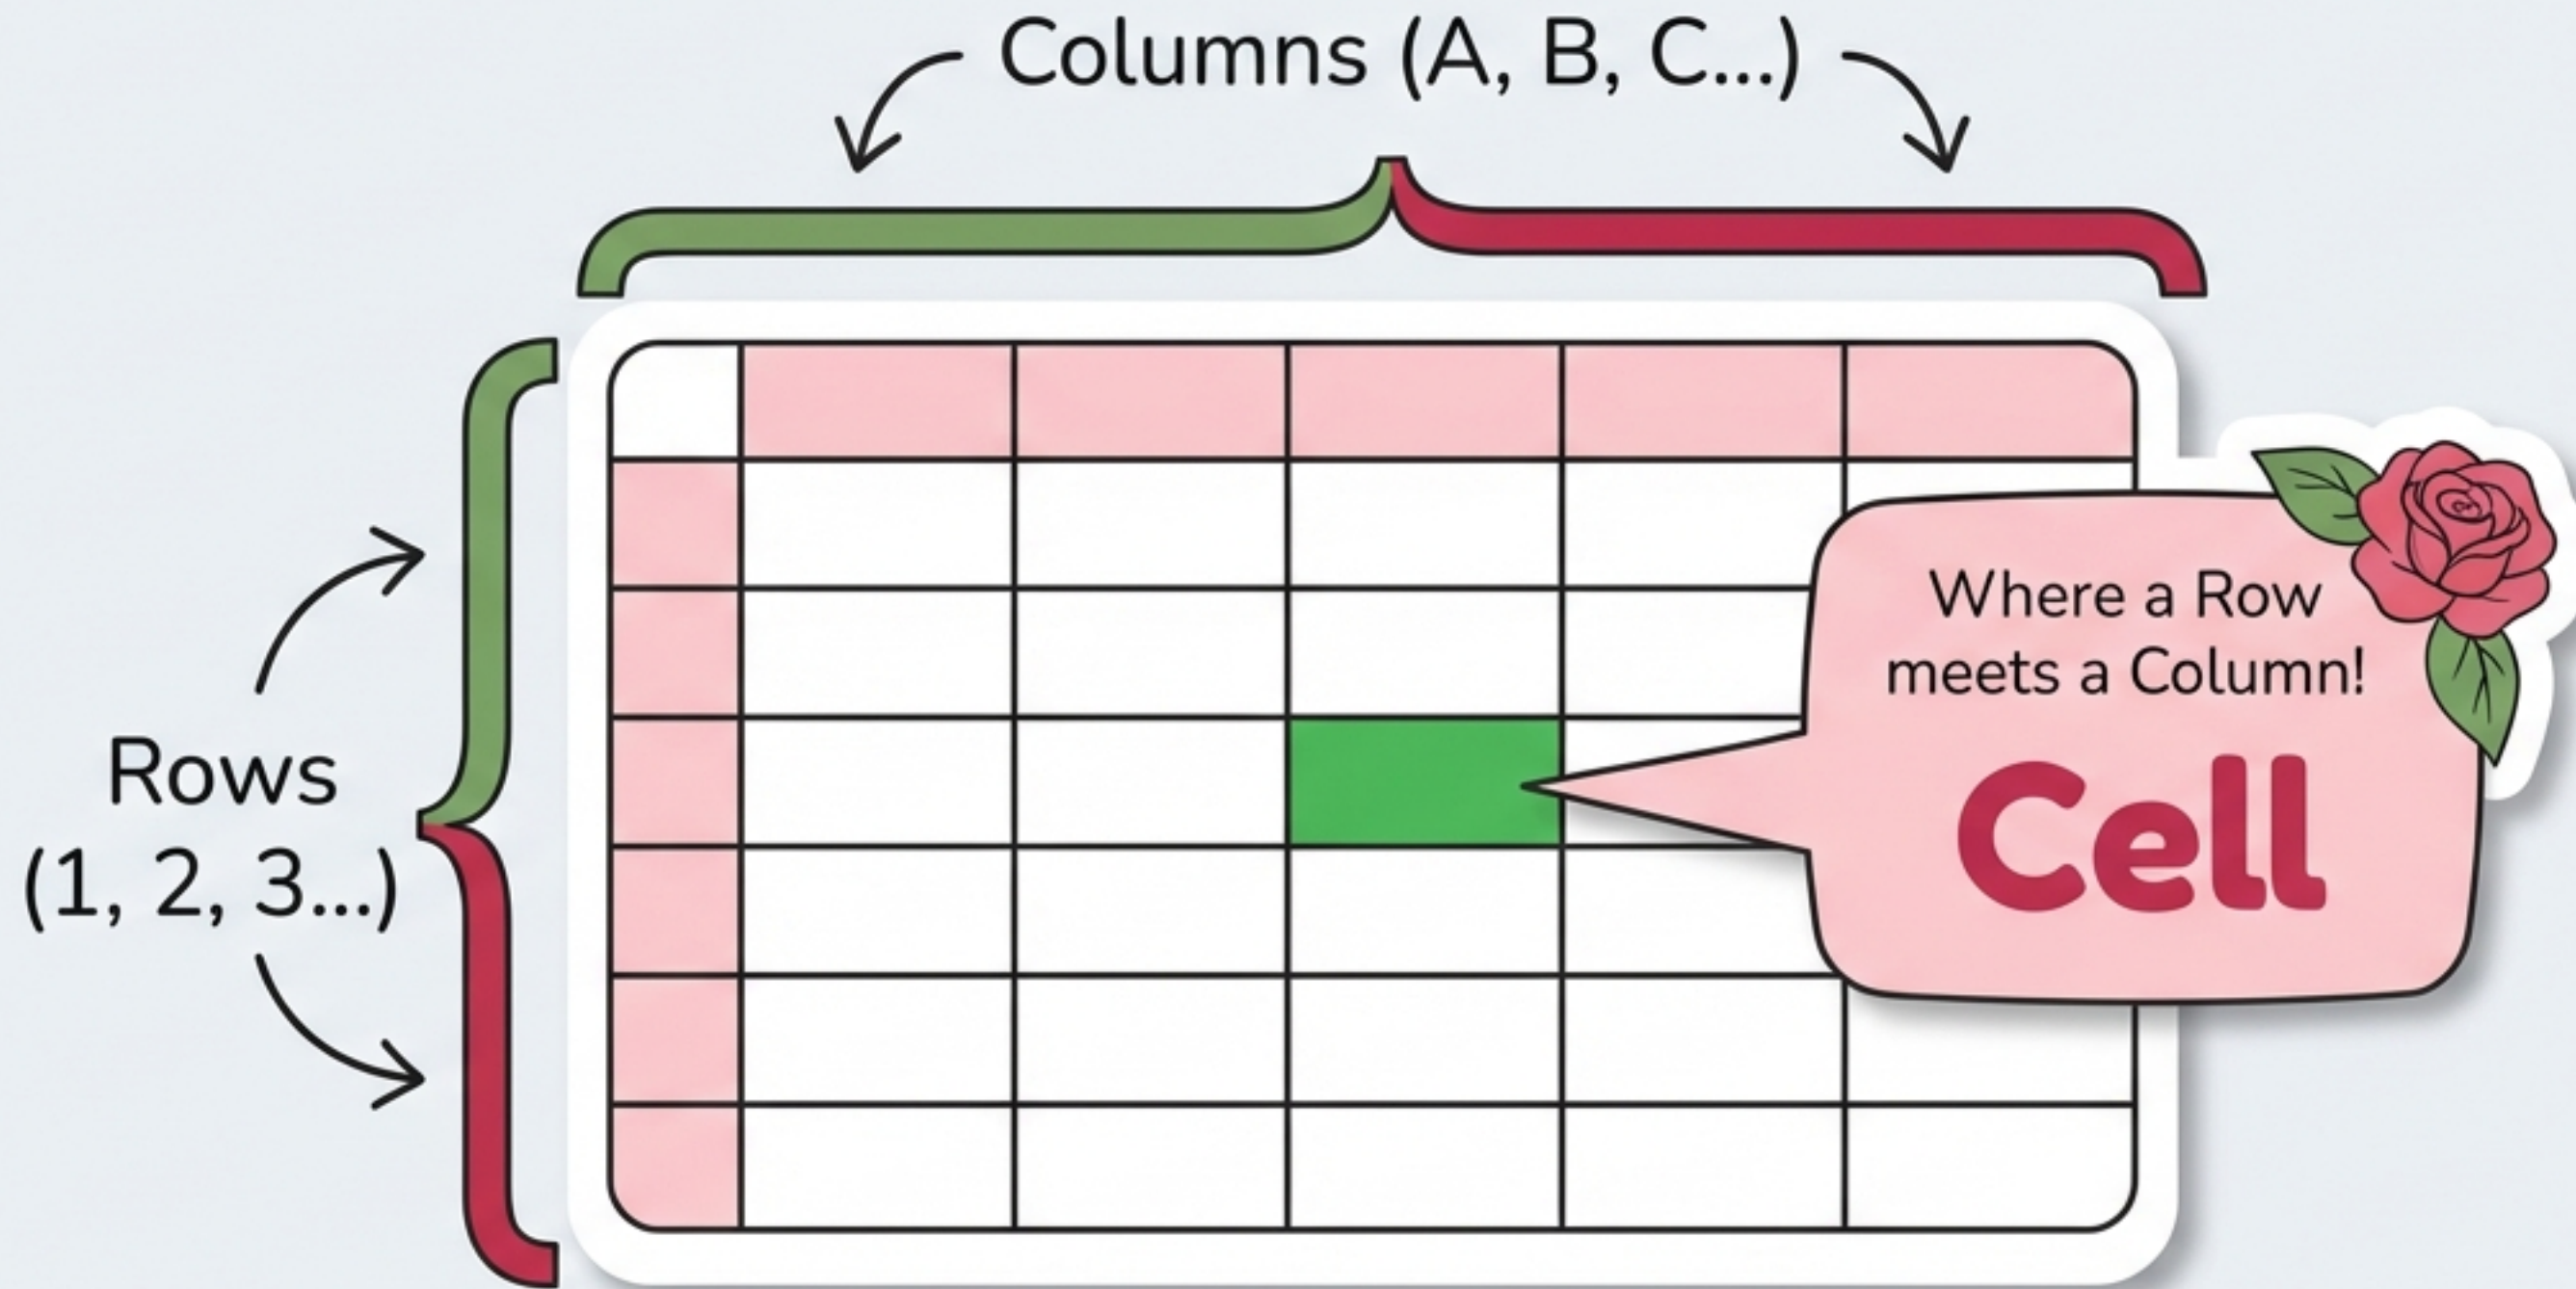

Good morning class! We have an interesting activity. We need 5 volunteers because we are making flower bouquets.

The Problem: Counting flowers for everyone and doing the math takes a long time. It can be tedious!

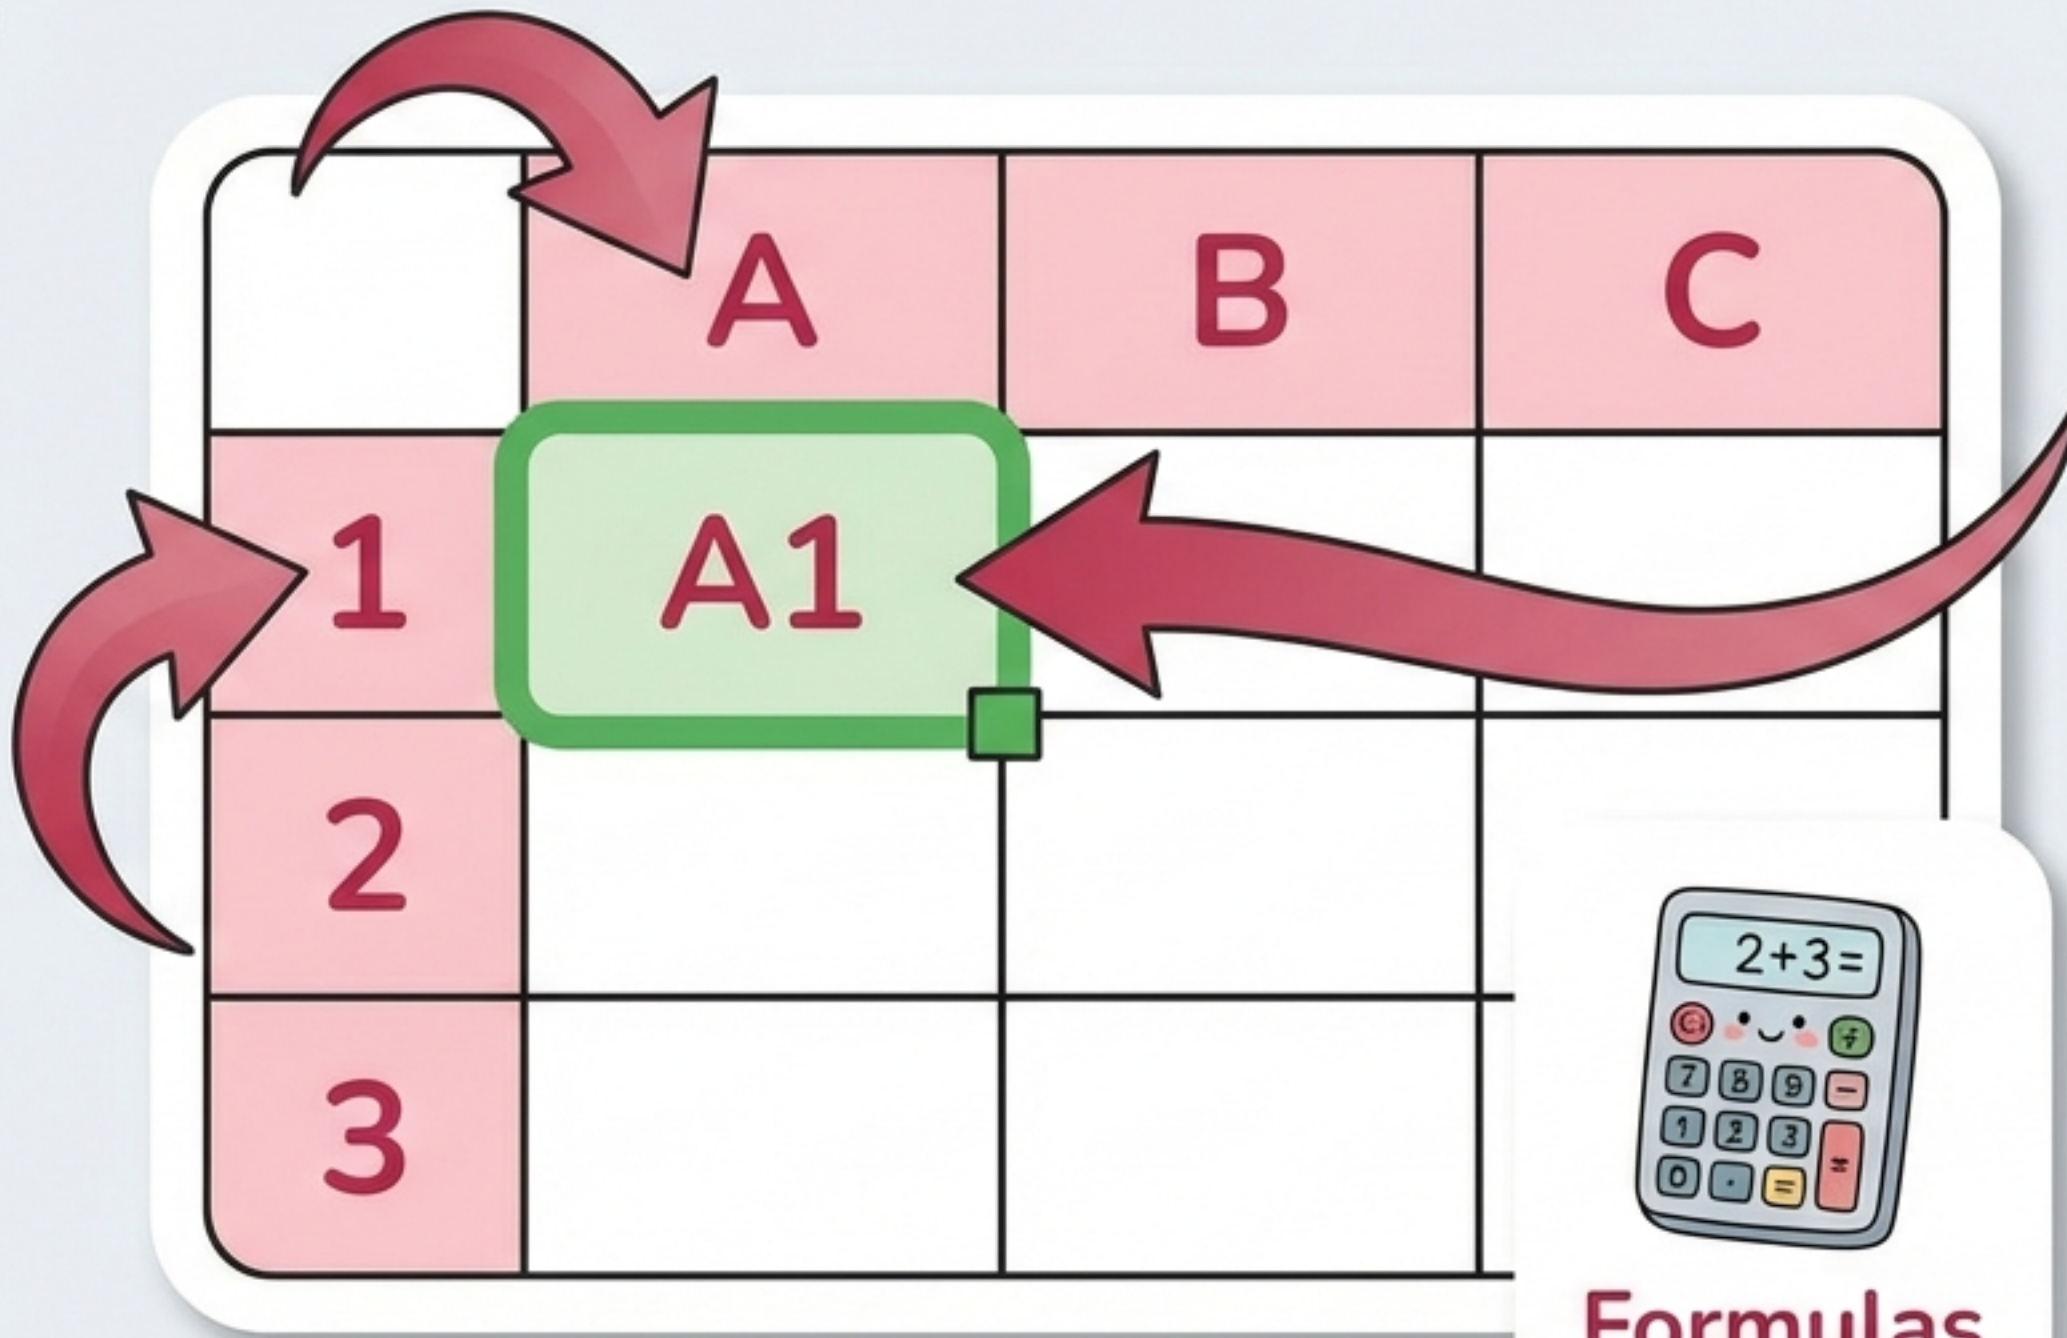

The Solution: Let's use a Spreadsheet. It helps us store, analyze, and organize data to do math quickly.

What is a Spreadsheet?

Every Cell Has a Name

Cell Reference =
Column Letter
+ Row Number

Formulas

Numbers

Text

Step 1: Organizing Our Data

Student Name	Red Rose	Pink Rose	White Rose
Priyanka	5	6	4
Rajeev	10	2	8
Annsh	8	8	9
Navneet	4	3	3
Mayuri	1	3	1

Checklist:

-  1. Create Columns for Rose Types
-  2. Create Rows for Students
-  3. Enter the count for each student.

Step 2: Making it Look Good

Before

Student Name	Red Rose	Pink Rose	White Rose
Priyanka	5	6	4
Rajeev	10	2	8
Annsh	4	2	6
Navneet	2	4	4
Mayuri	10	3	7

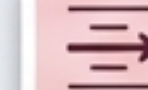

After

Student Name	Red Rose	Pink Rose	White Rose
Priyanka	5	6	4
Rajeev	10	2	8
Annsh	4	2	6
Navneet	2	4	4
Mayuri	10	3	7

B

B

Bold (B)

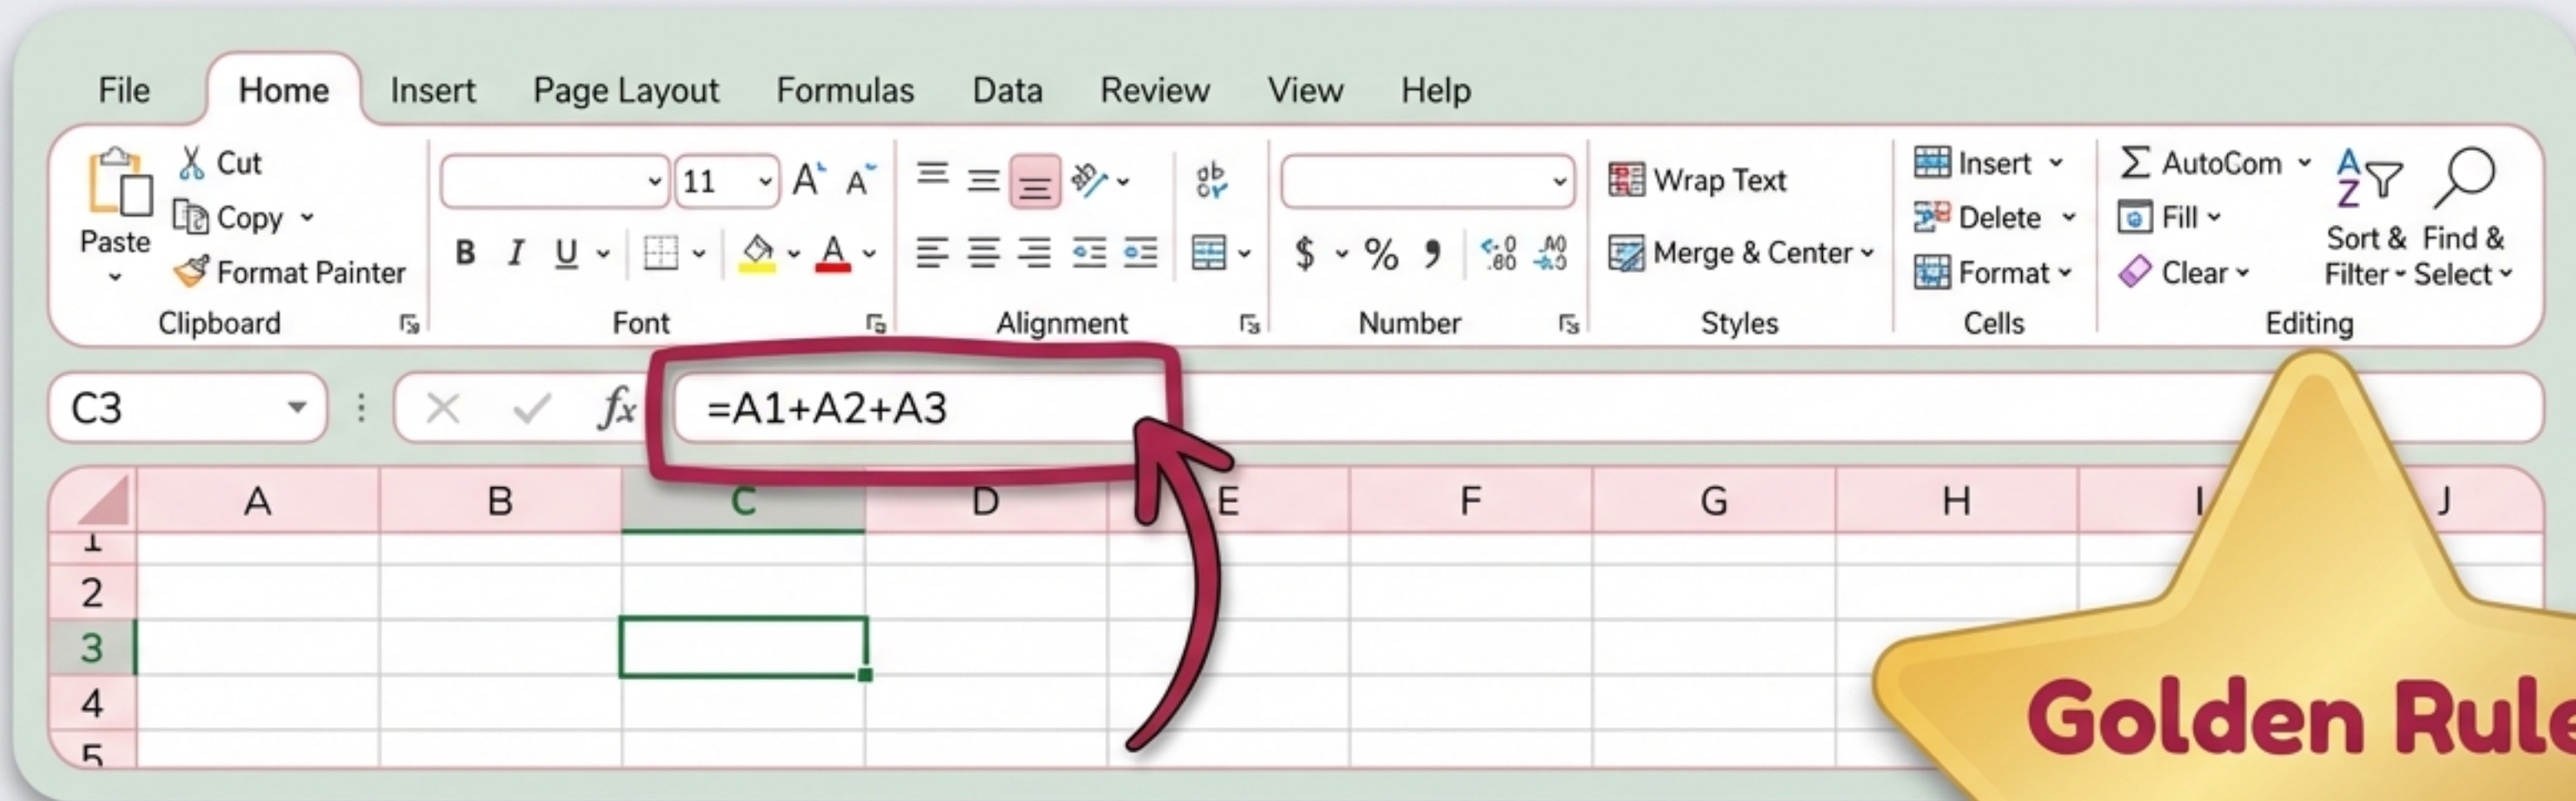

Center Align

Borders

The Formula Bar

Formula = Instructions for Math

Golden Rule

Always start
with an Equal
Sign (=)!

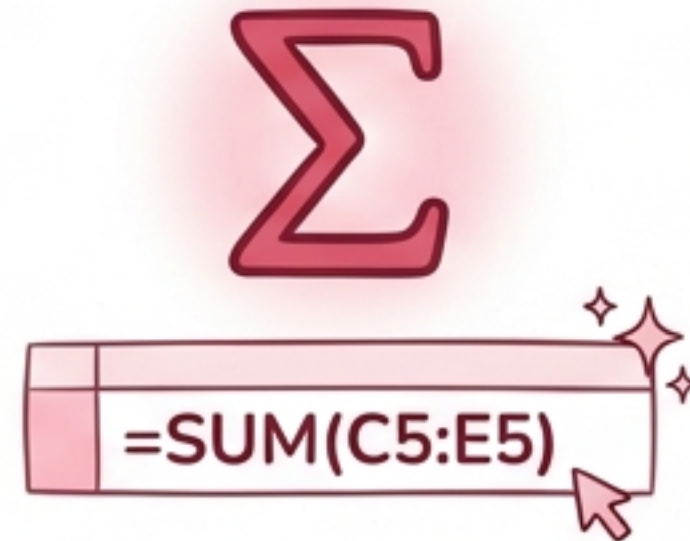

Formulas vs. Functions

Manual Formula

You type every step manually.

Function (The Shortcut)

A magic word Excel already knows.

Common Functions

SUM()

Adds numbers

AVERAGE()

Finds average

COUNT()

Counts items

Step 3: Calculating Total Roses

	A	B	C	D	E
1	Student Name	Red Rose	Pink Rose	White Rose	Total Roses
2					
3	Annna	4	3	4	
5	Priyanka	5	6	4	=SUM(C5:E5)
4	Mony	4	3	5	
6	Nara	5	2	3	
7	Lyran	4	1	4	
8					

1. Click the cell under **Total Roses**.
2. Type **=SUM(**.
3. Select Priyanka's roses.
4. Press **Enter**!

Work Smarter, Not Harder!

15

15

15

15

15

15

Don't type **the**
formula 5 times!

Just click the corner
and **DRAG** it down.

Excel calculates the
rest for you.

Check Your Results

Student Name	Red Rose	Pink Rose	White Rose	Total Roses
Priyanka	5	6	4	15
Rajeev	10	2	8	20
Annsh	8	8	9	25
Navneet	4	3	3	10
Mayuri	1	3	1	5

Great! Now we know exactly how many flowers each student has.

Step 4: How Many Bouquets?

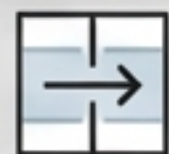

Student Name	Red Rose	Pink Rose	White Rose	Total Roses
Priyanka	5	6	4	15
Rajeev	10	2	8	20
Annsh	8	8	9	25
Navneet	4	3	3	10
Mayuri	1	3	1	5
Total Bouquet				$=(\text{Total Roses}) / 5$

1 Bouquet =

$$\frac{\text{Total Roses}}{5 \text{ Roses}}$$

We need to **DIVIDE** the Total Roses by 5.

The Final Touch

Merge &
Centre

110	:	fx					
	A	B	C	D	E	F	
10		Flower Bouquets					
11							

1. Select cells **B10** to **E10**.
2. Click the **Merge & Centre** button.
3. Type the title '**Flower Bouquets**'.
4. Make it **Bold** and change font size to 16.

Why Spreadsheets are Magic

Student Name	Red Rose	Pink Rose	White Rose	Total Roses
Mayuri	1	3	1 / 6 → 5 → 10	

Dynamic Data! If Mayuri gets more flowers, we just change one number. The formula updates the **Total** automatically!

It's like magic!

Tech Flash: Words to Remember

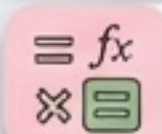

Spreadsheet Rows and columns to store data.

Cell Where a row and column meet.

Table Data arranged in a grid.

Formula Instructions for math (Starts with =).

Report: Flower Bouquets

Student Name	Red Rose	Pink Rose	White Rose	Total Roses
Priyanka	5	6	4	15
Rajeev	10	2	8	20
Annsh	8	8	9	25
Navneet	4	3	3	10
Mayuri	1	3	6	10
Total Bouquet				16

Great job! Don't forget to save your file as 'Flower Bouquet'.
