

Digital Art Magic: Mastering Layers

ICT 360 – Grade 4

Welcome to the studio! Today, we learn how to paint with digital paper.

Hey Dad, how can I
create a painting on the
laptop... like my collage
in art class?

+

=

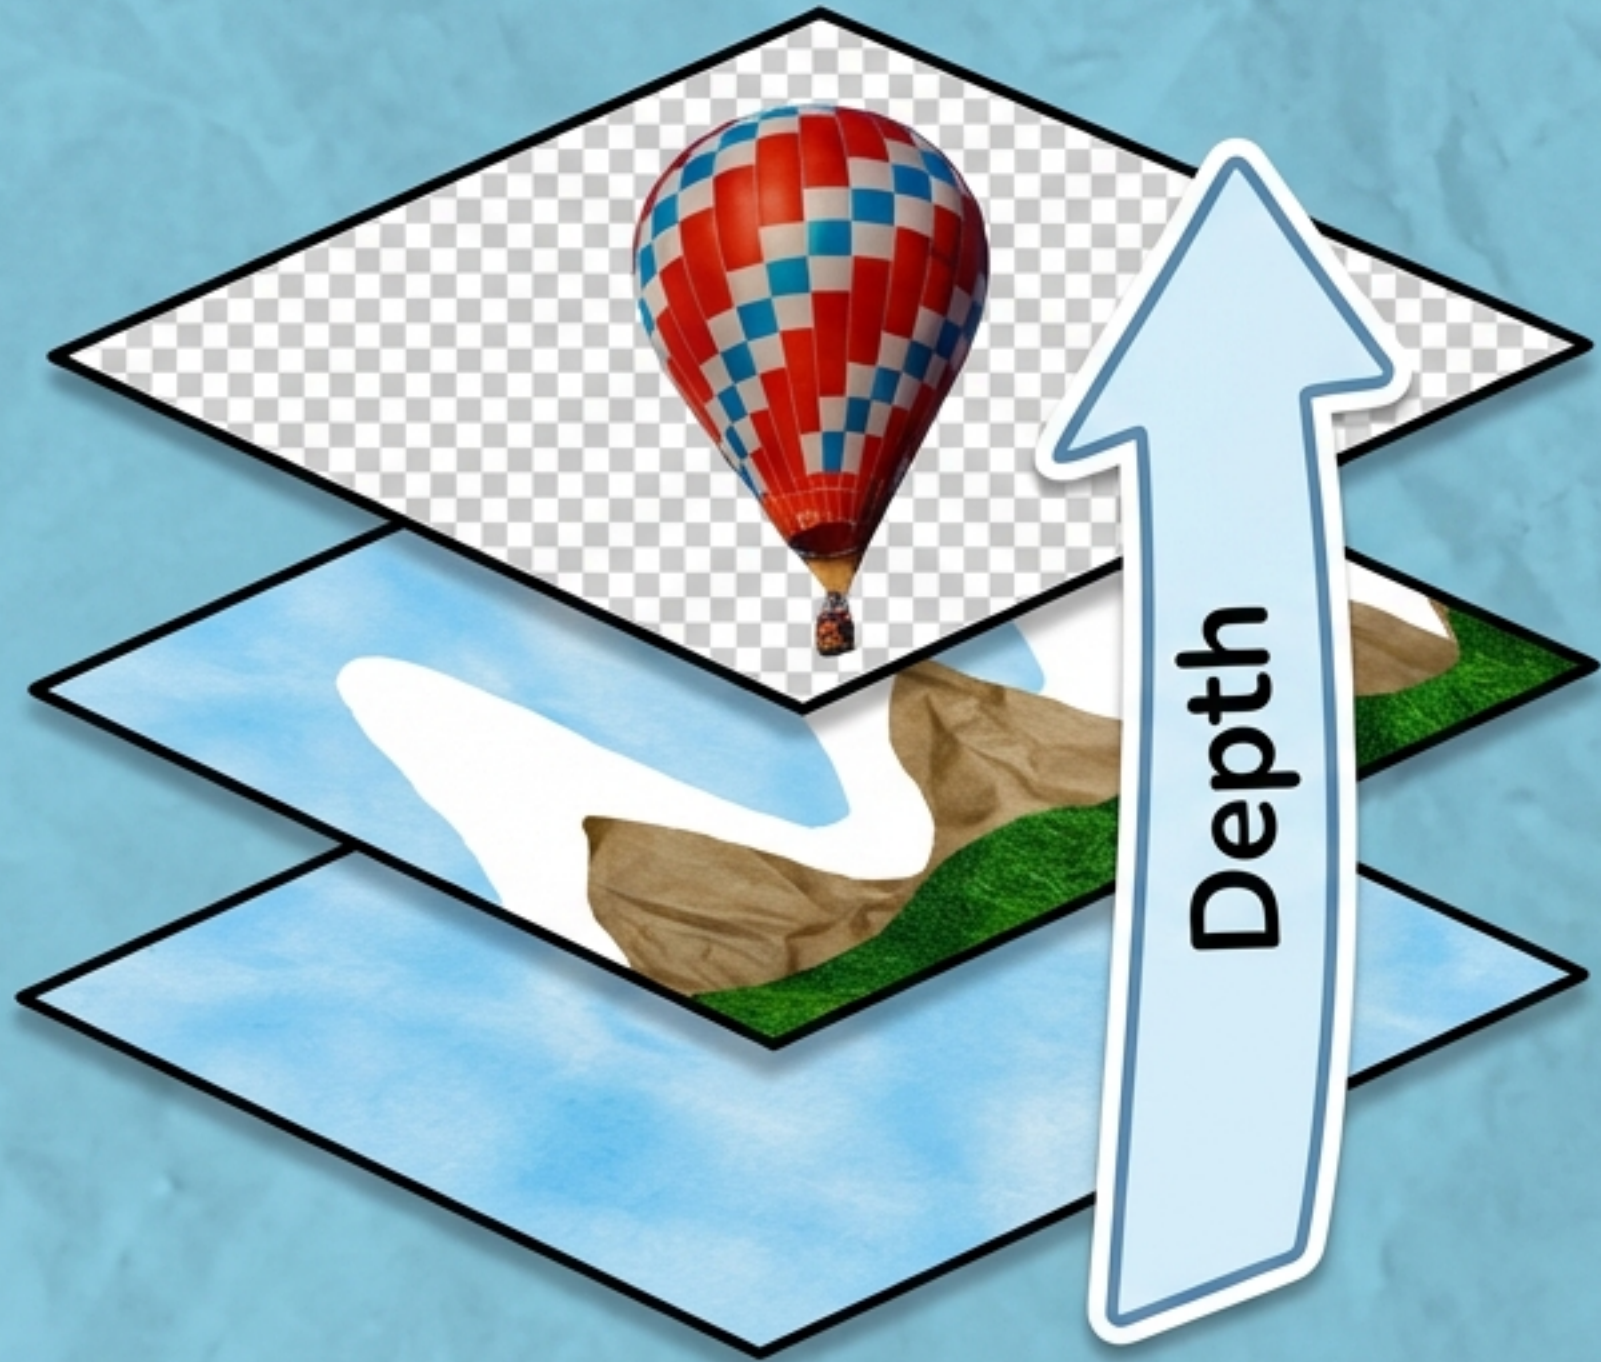

It is very easy!
We use Layers.

**Just like a paper collage, digital art is made by
placing one image on top of another.**

Each part of your digital artwork, like a character or a background element, sits on its own transparent sheet called a Layer. You can move, resize, and change each layer independently without affecting the others, just like gluing paper pieces on top of each other to build a picture!

What is a Layer?

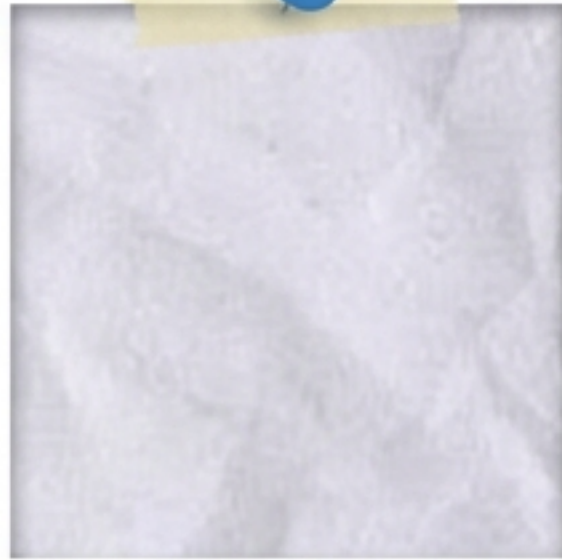

Layers are used to separate different parts of an image. One image is placed on top of the other. You can move or change one layer without messing up the others!

Our Mission: The Mountain Landscape

We will combine multiple images to create a single beautiful scene.

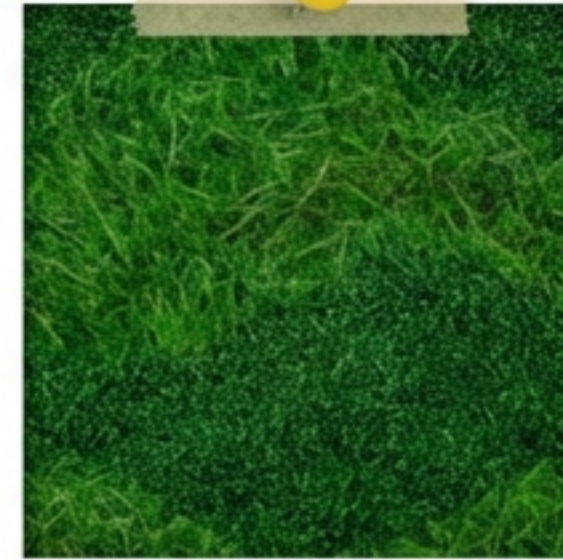

The Sky

The Snow

The Earth

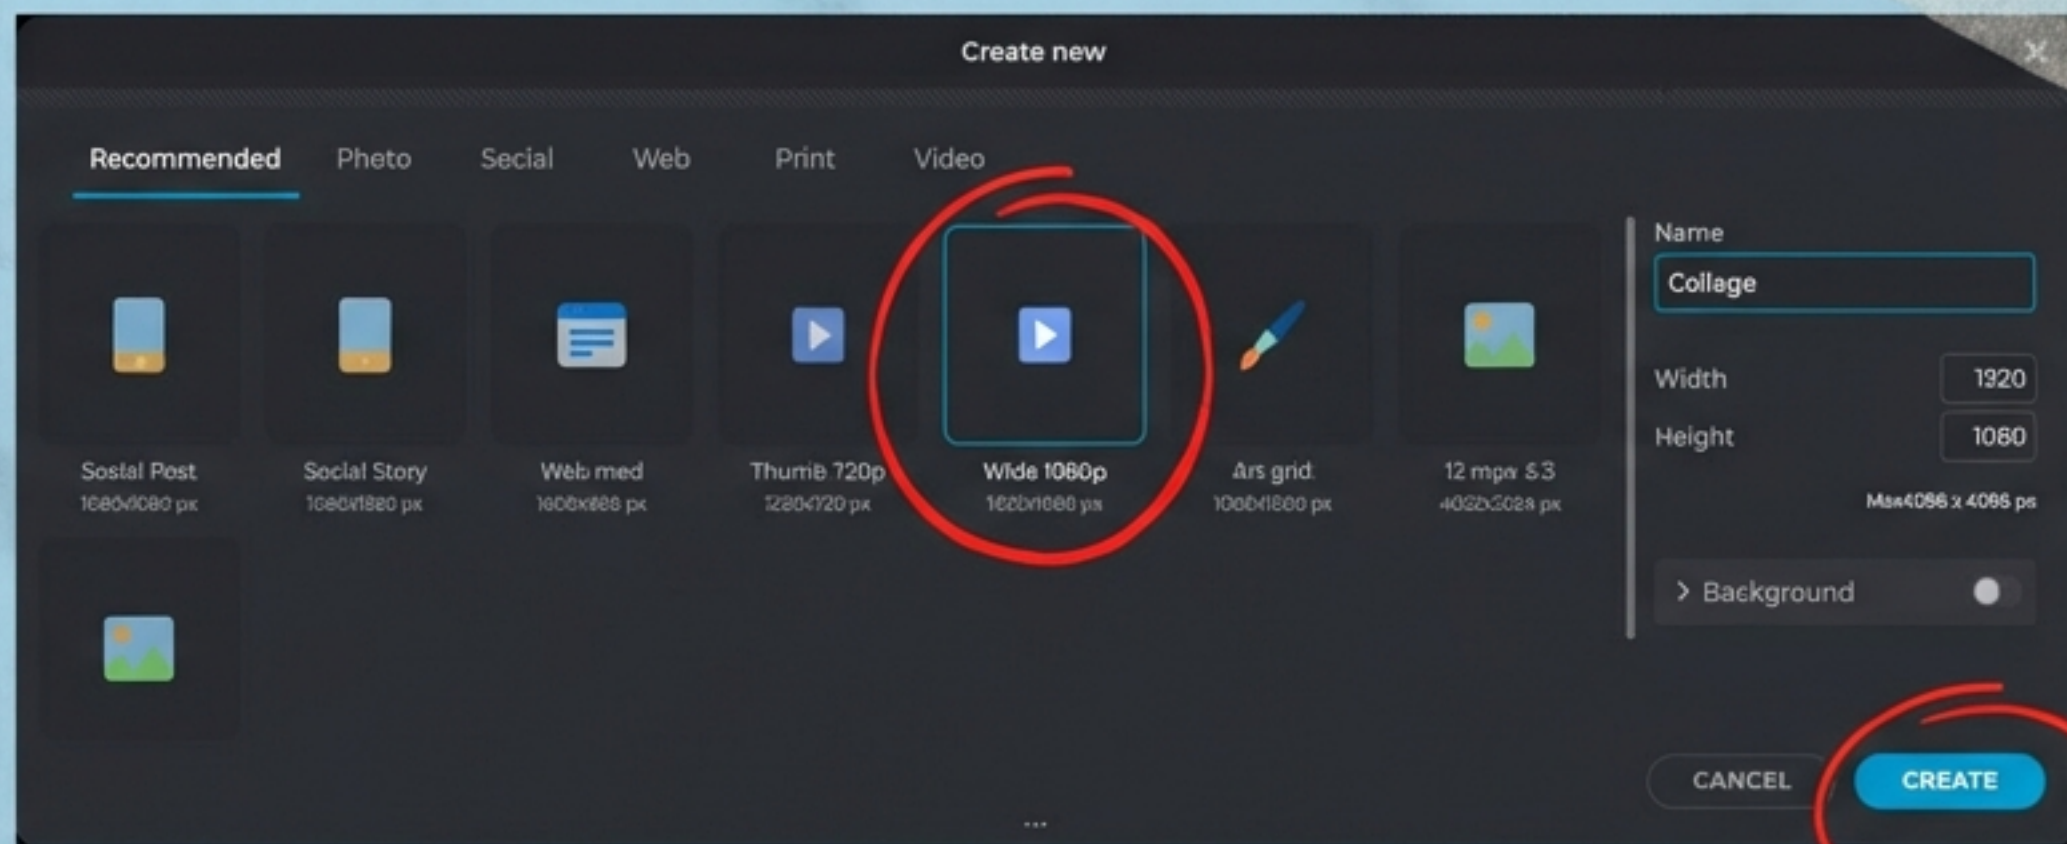

The Ground

The Character

Step 1: The Blank Canvas

- ☒ Click **Create New**
- ☒ Select **Wide 1080p**
(1920 x 1080 pixels)
- ☒ Name your project:
Collage

Step 2: The Foundation

The bottom layer is always the background. The sky is our furthest layer, so it goes first!

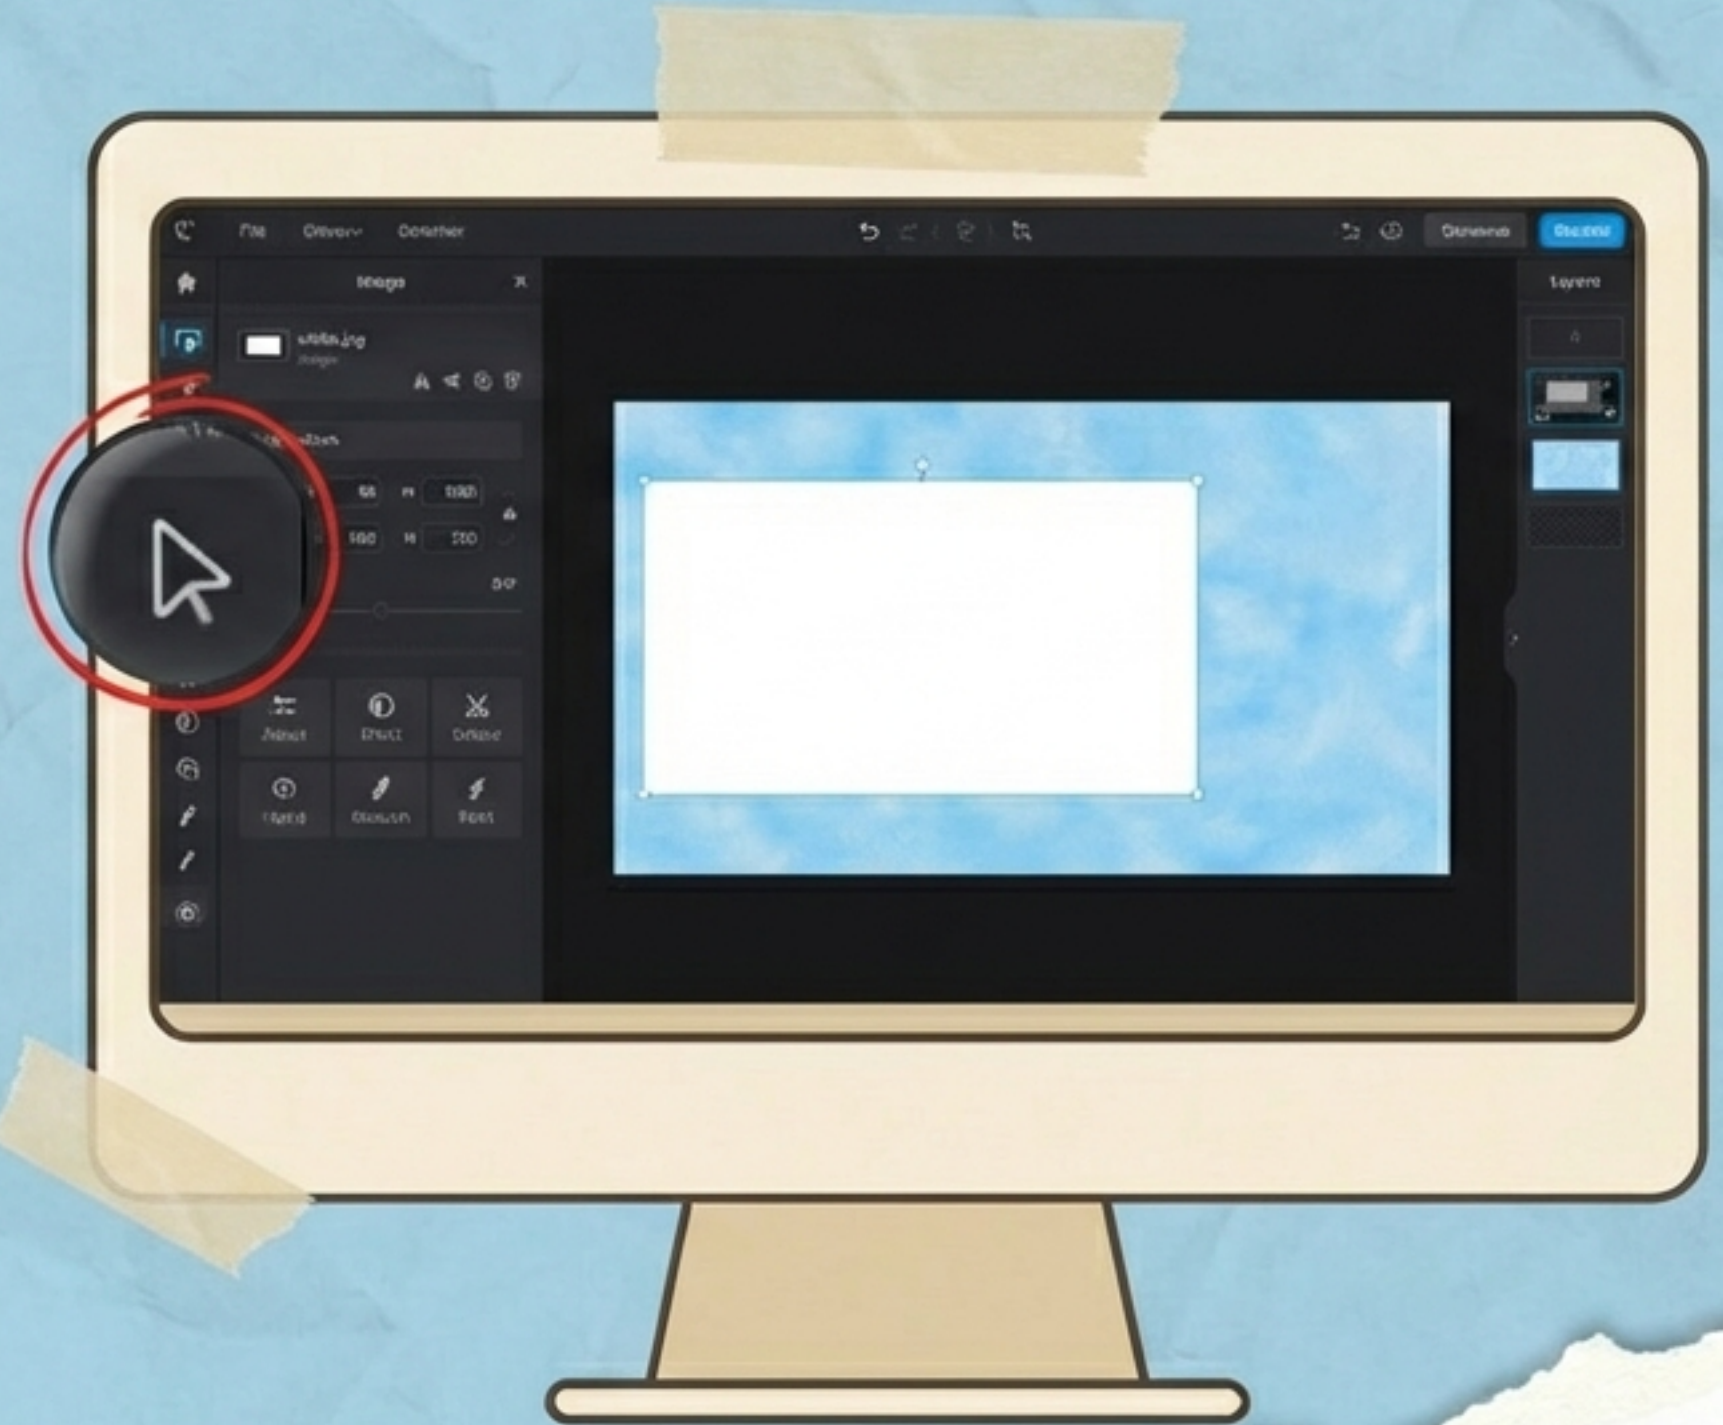

Layer 1: Blue Sky

Step 3: Adding Material

****Arrange Tool**:** This tool lets us resize and position the image.

Instruction: Add the 'White' image. Drag the corner handles to make it fit the width of the canvas.

The Digital Scissors: Cutout Tool

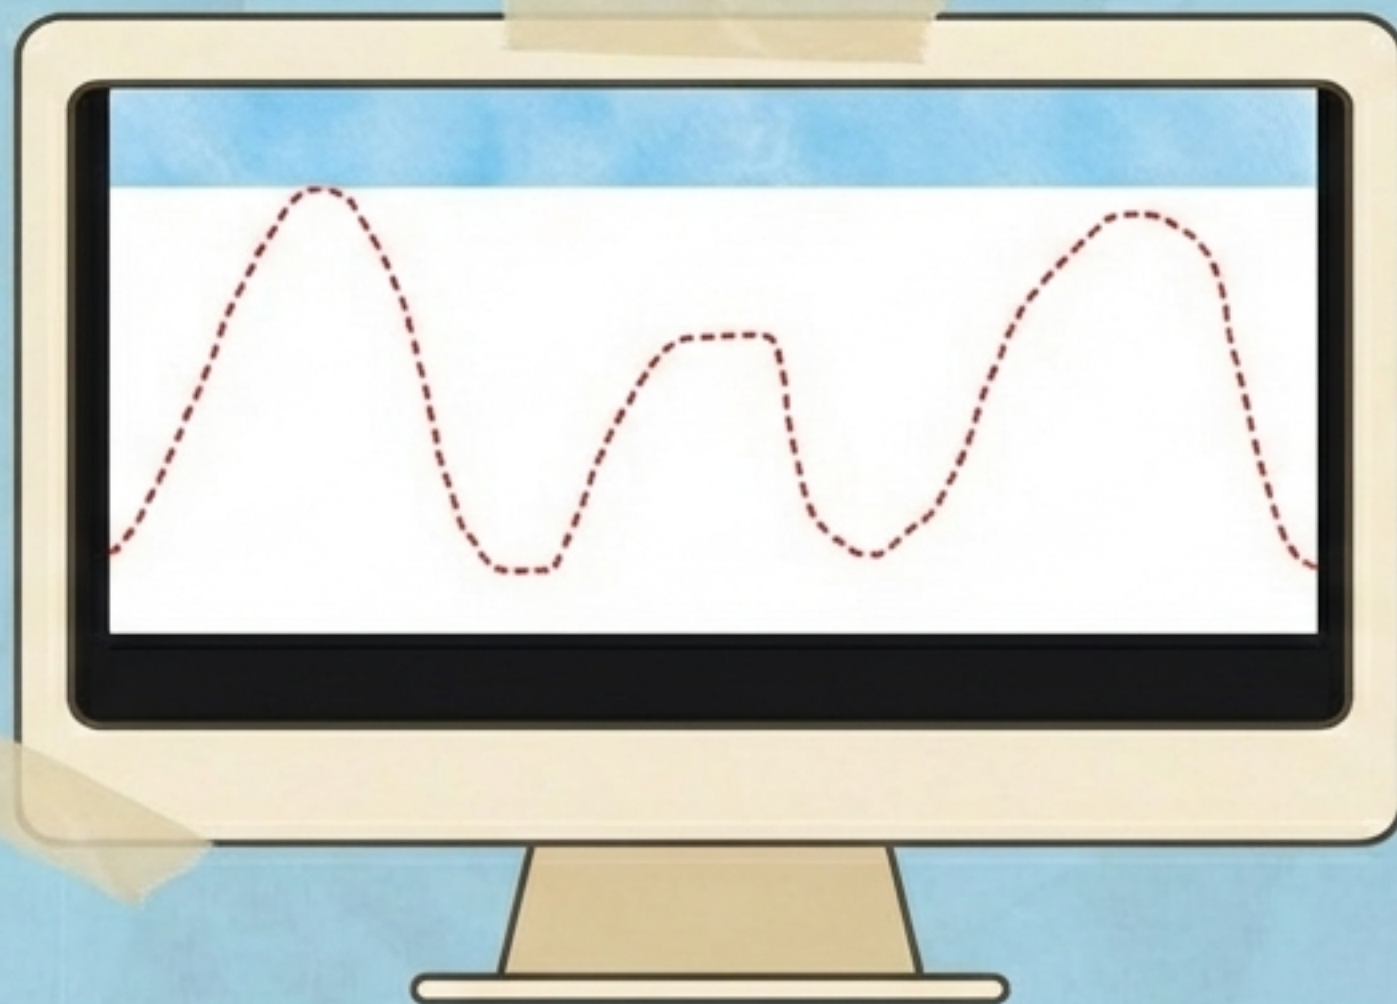

Used to extract or delete parts of an image.

Lasso Cutout

Allows us to draw a shape manually. We will 'Remove' the parts we don't want.

Step 4: Carving the Mountains

Draw a wavy line!
Everything above
this line will be
deleted.

Select the **Lasso Cutout**. Set mode to **Remove**. Draw the shape of the mountains.

The Result

We created a new shape by deleting the paper we didn't need. Now we have snow mountains!

Tip: You can do the same thing with the Brown and Green paper layers to add more mountains and grass.

Step 5: Adding Characters

Hmm...

The Problem: The balloon image has its own blue sky background. It blocks our mountains!

Advanced Trick: Magic Cutout

Before

After

1. Select **Magic Cutout**.
2. Set Tolerance to 20.
3. Click the sky to make it vanish!

The Final Masterpiece

Our Digital Collage

Don't forget
to save as a
PNG!

Toolbox Review

Layers:
Stack images
to create
depth.

Arrange Tool:
Resize and
position
elements.

Cutout Tool:
Delete sections
manually or
automatically.

Layers allow us to work on one
element without changing the
others.

Artist's Quiz

1. _____ are used in digital image editing to separate different elements.
(Hint: Starts with L)

2. The _____ tool is used to extract or delete a section of an image.
(Hint: Starts with C)

Great job
creating your
digital
collage!
