

Unit 10: Retouch Images

Become a Digital Magician!

Do you see the difference?

Context: Grade 4 ICT /
Computer Studies

Oops!

The Problem: The Photobombers

☹️ I wish I had a perfect picture of just the 'Ship of the Desert' (the camel). But look! There are people standing right there.

The Challenge: Can we remove unwanted objects from a photo without leaving a hole in the picture?

The Answer: Yes! With a technique called **Photo Retouching**.

What is Photo Retouching?

Improves
Appearance

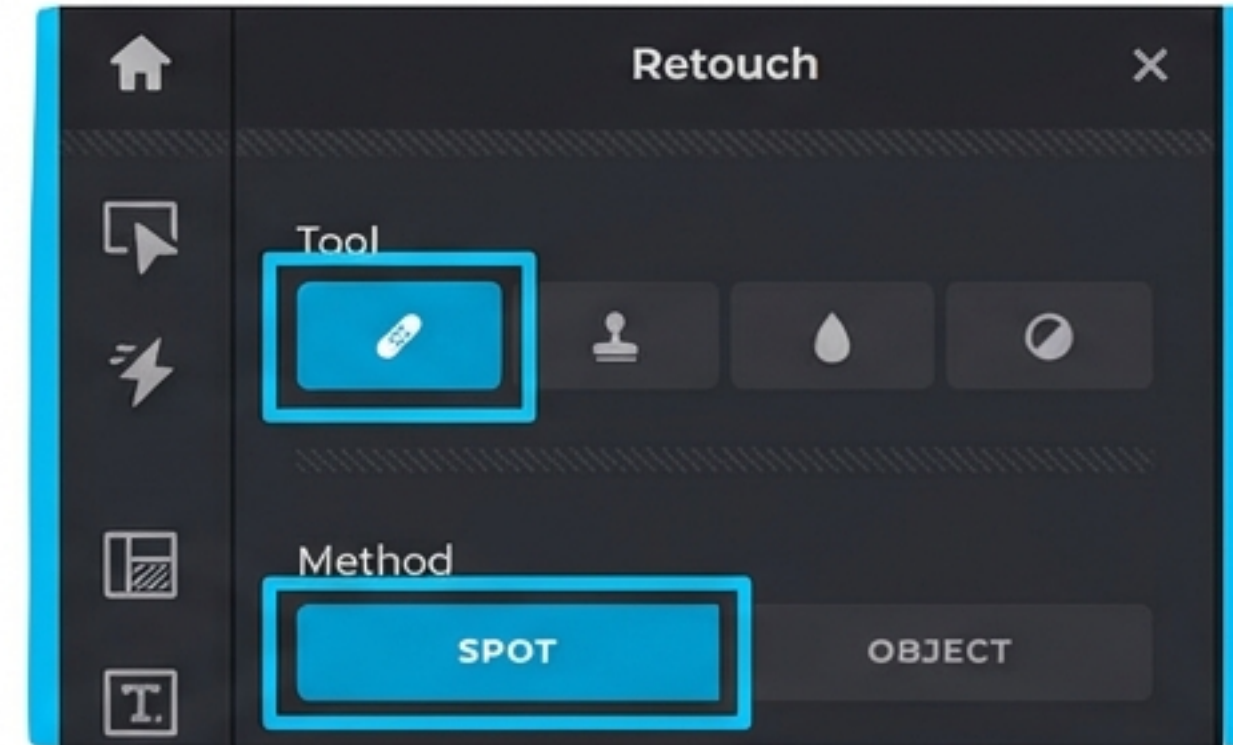

Removes
Unwanted Objects

Fixes Scratches
& Tears

Definition: Photo retouching refers to making small changes to an image to improve how it looks. We use it after color correction!

Open Your Toolkit: Pixlr

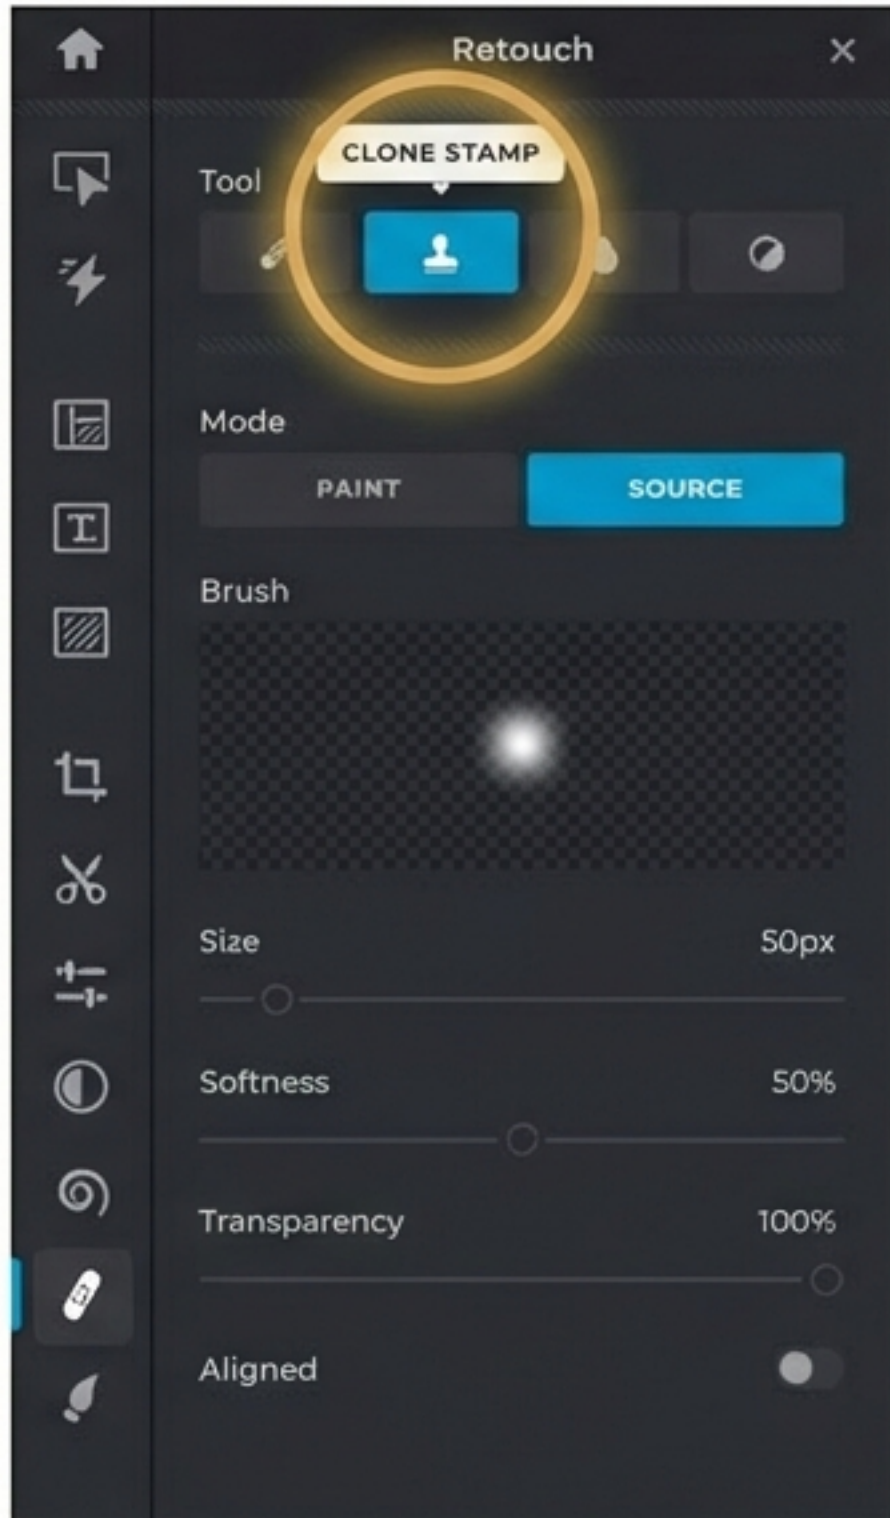

The Mission: Let's clean up the image of Al Jahili fort and the camel.

Step 1: Open your image editor (Pixlr).

Step 2: Find the Retouch Tool.

 Hint: Look for the icon that looks like a Band-Aid!

Spell #1: The Clone Stamp

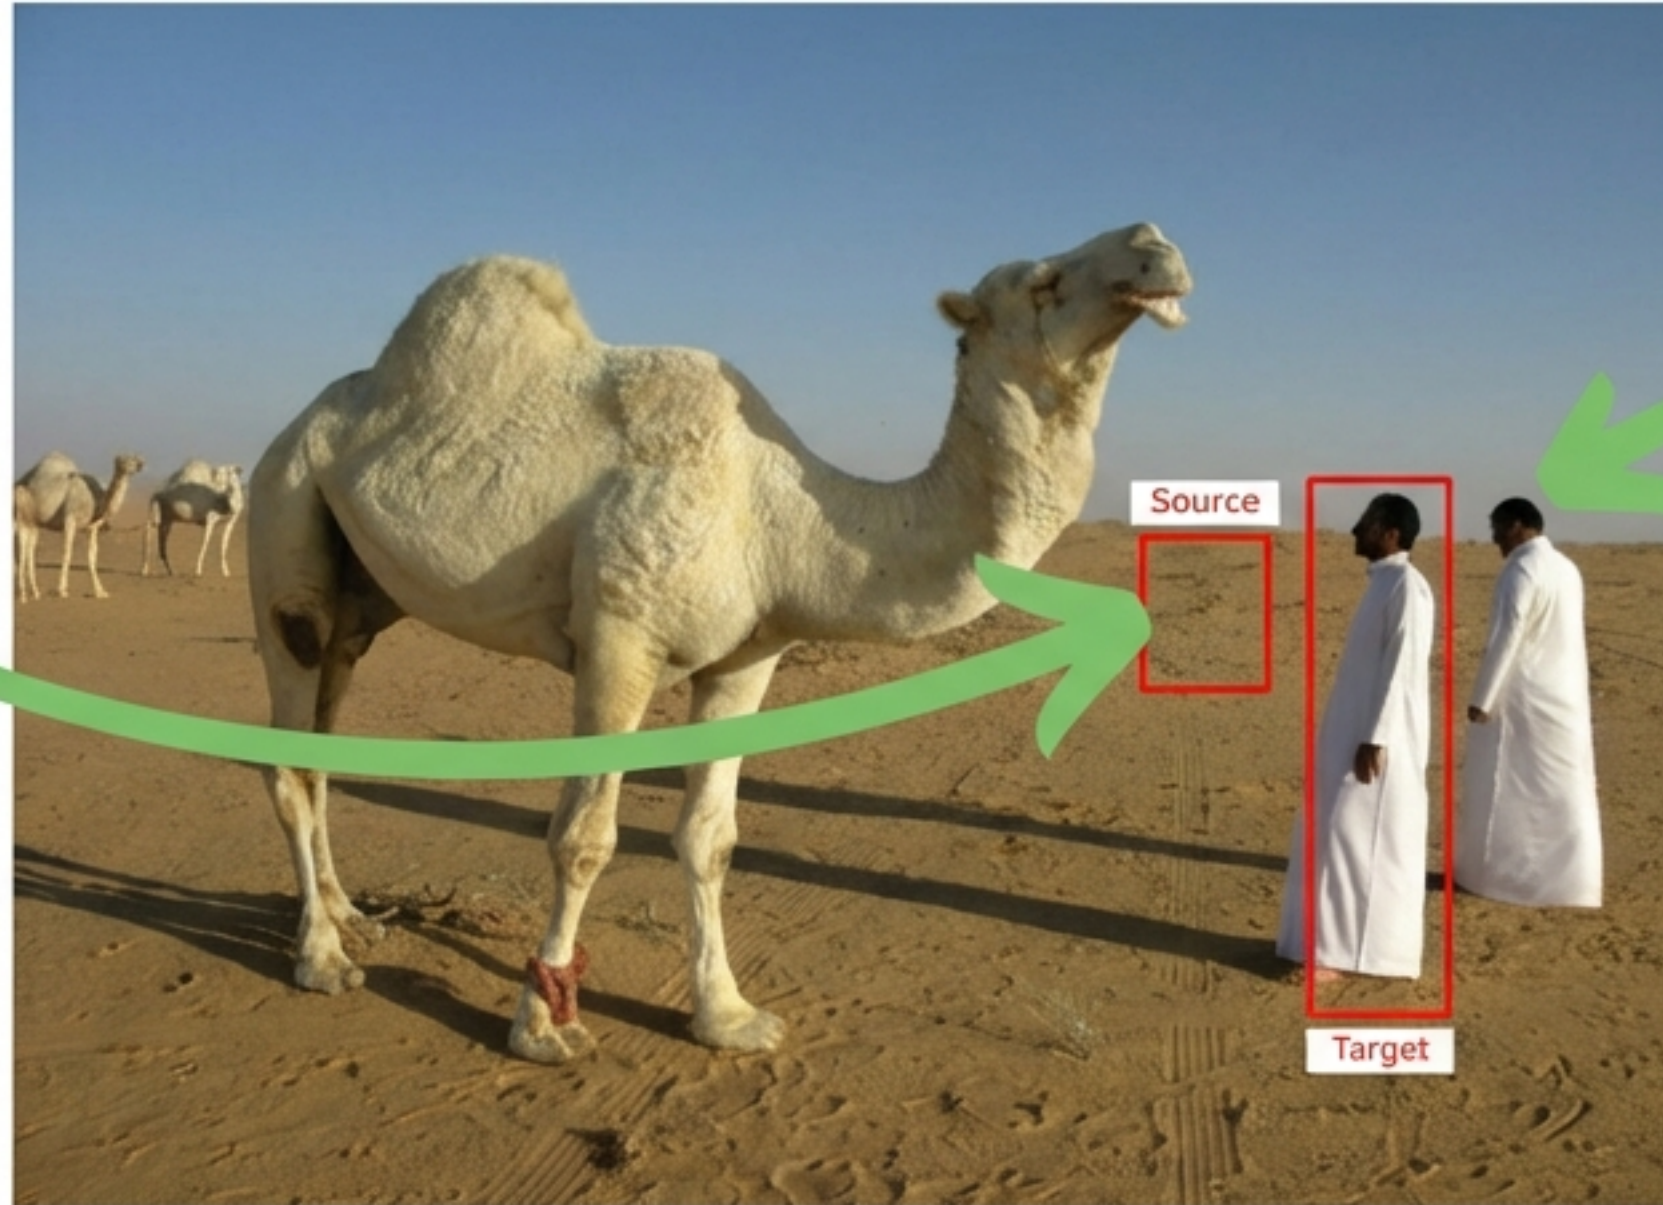

- **What is it?** The Clone Stamp is a prime tool for photo retouching.
- **How it works:** It functions like a “Copy and Paste” brush.
- **The Rule:** It replaces a Target Area (the bad part) with a Source Sample (the good part) that YOU select manually.

How Cloning Works: Source vs. Target

**1. Source
(Clean Sand)**

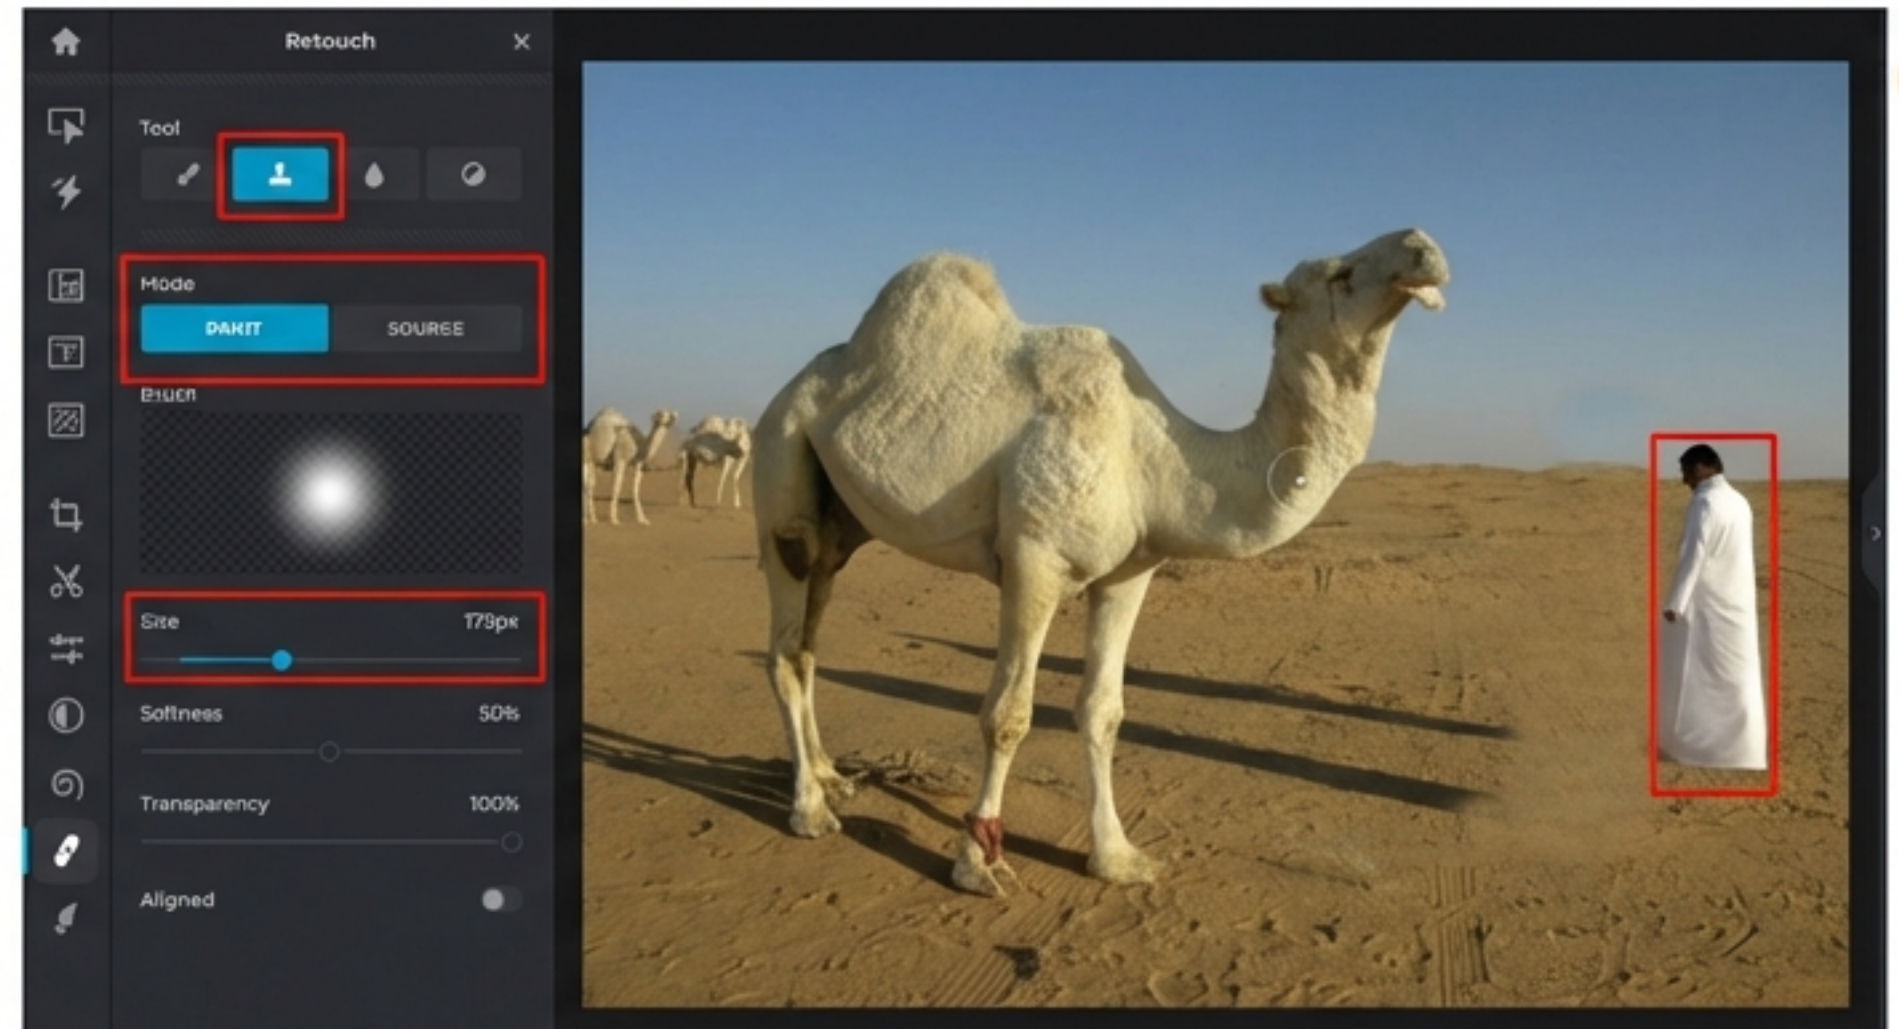

**2. Target
(Unwanted People)**

Key Concept: You are painting sand over the people to hide them!

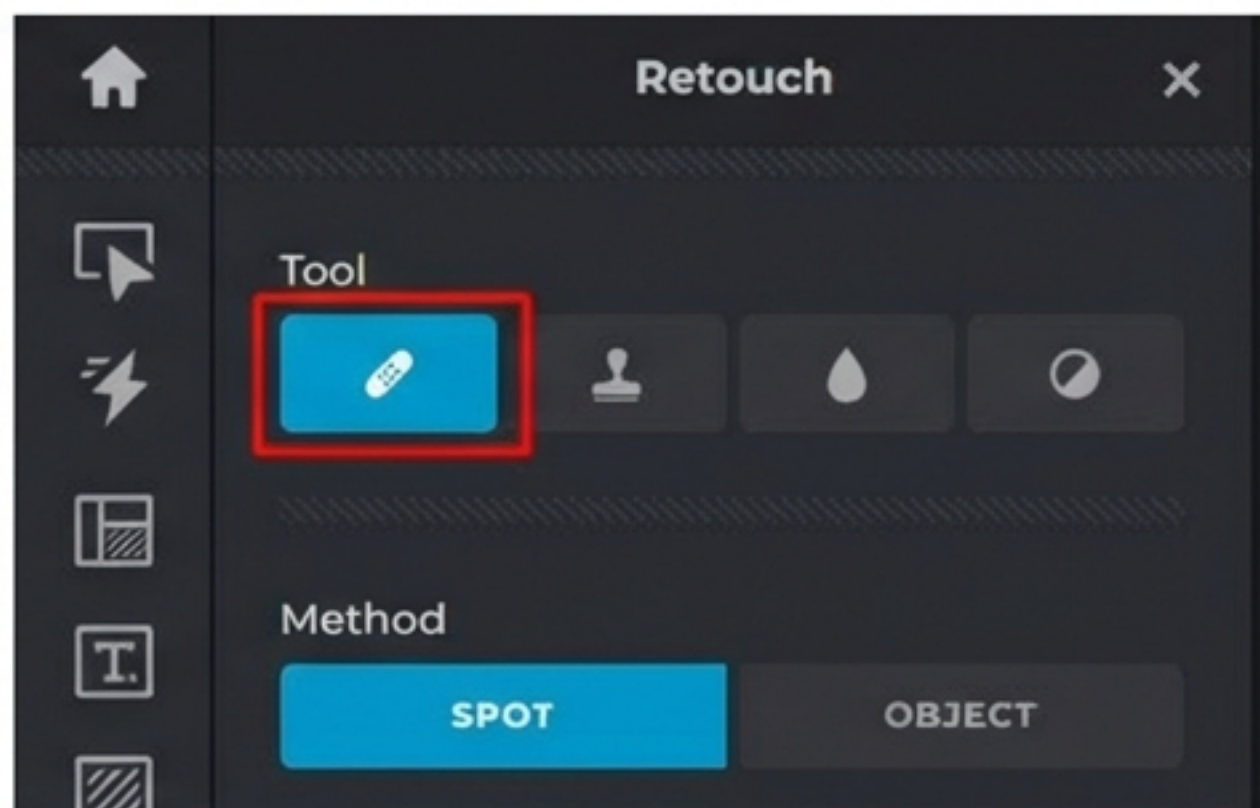

Let's Cast the Spell (Step-by-Step)

1. Select the Clone Stamp tool.
2. Set your Mode to 'Source'.
3. Hold **Shift** + Click on the empty sand to 'pick up' the texture.
4. Paint over the people!

 **Pro Tip:** Change the Brush Size to fix smaller or larger areas.

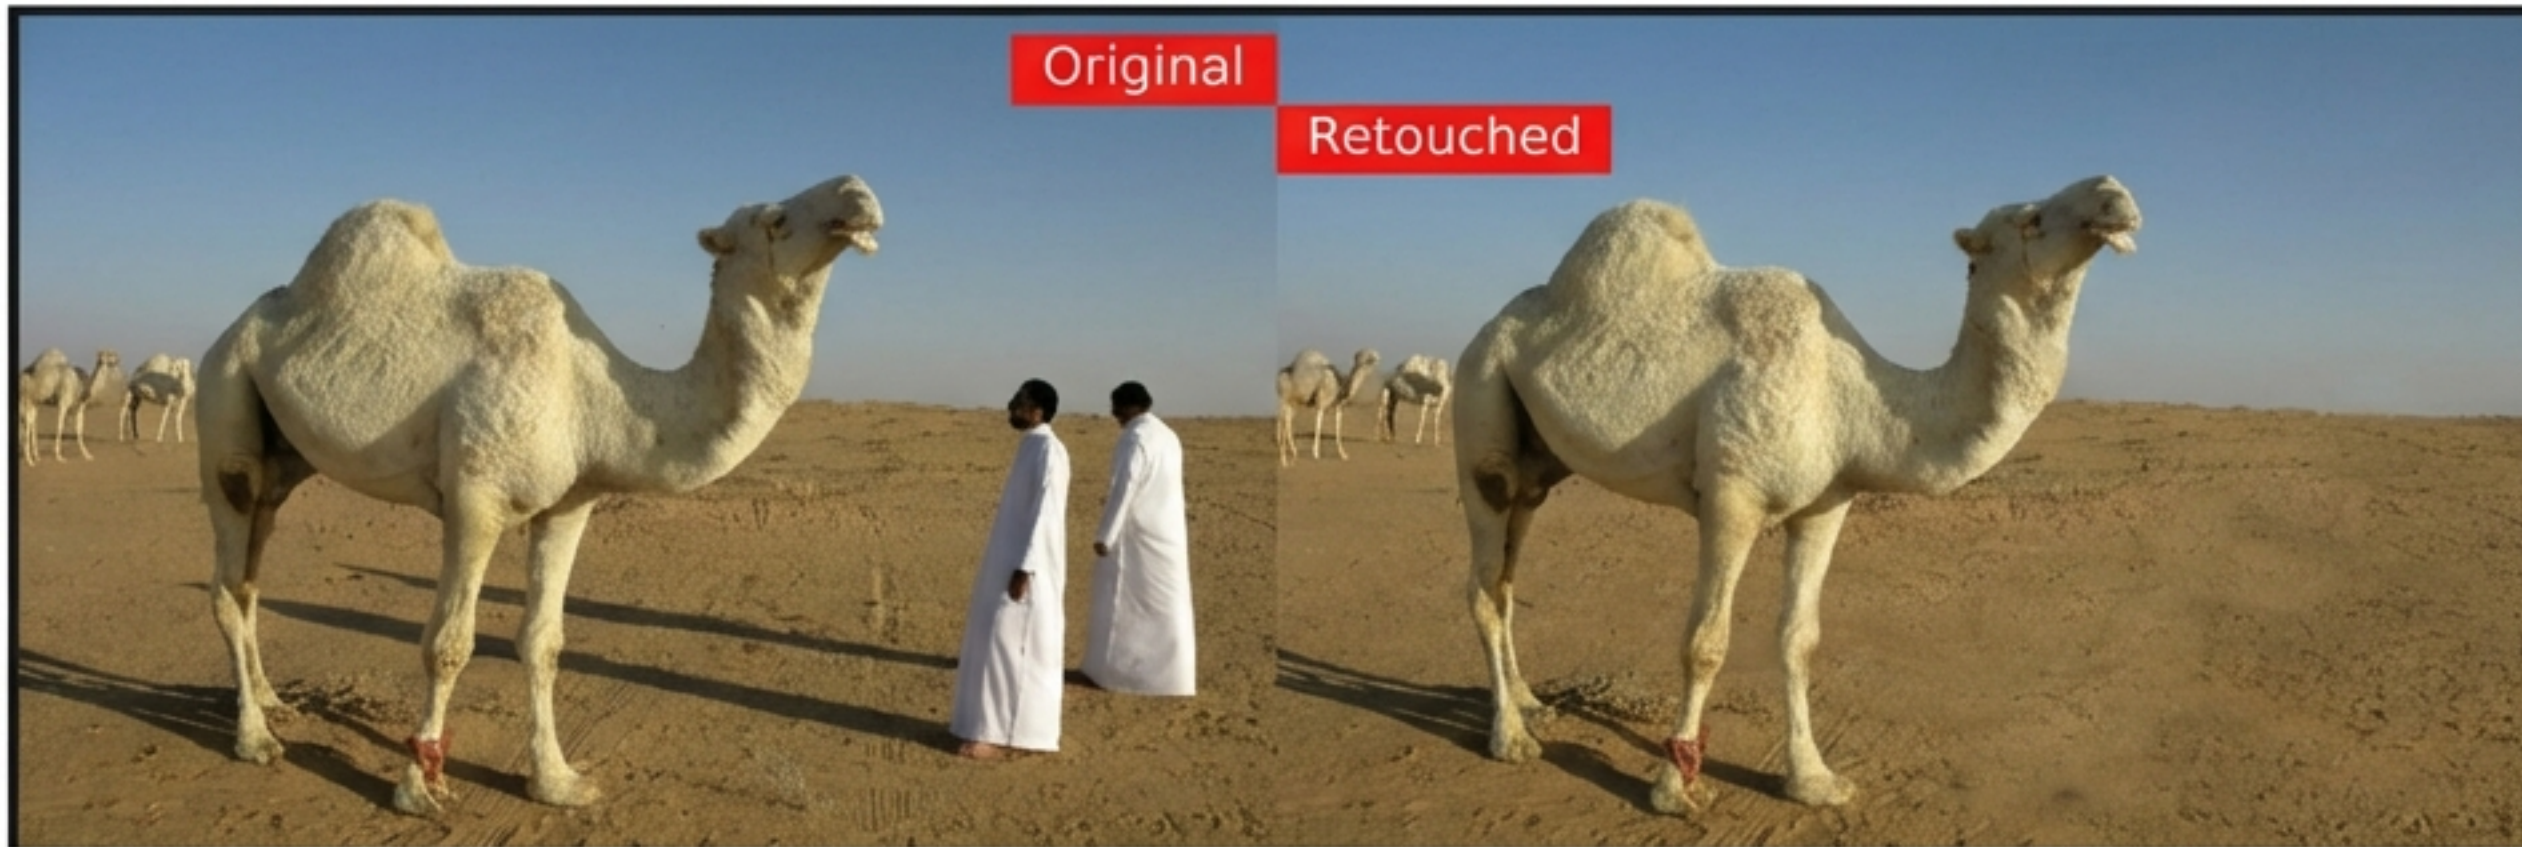

Spell #2: The Heal / Repair Tool

The Big Difference:

Clone Stamp: YOU choose the source manually.
Heal / Repair: The COMPUTER chooses the source automatically.
Usage: Great for quickly clearing up small spots or shadows.

Mission Accomplished!

Look at the result! The people are gone, and the Ship of the Desert stands alone.

- **How we did it:**

1. Used Clone Stamp to remove the people.
2. Used Heal/Repair to clean up the shadows on the sand.

Don't Forget: Save your magical artwork as a .png file!

Real World Magic: Saving Old Photos

New Challenge: “Can I use this technique to restore Grandpa’s old photos?”

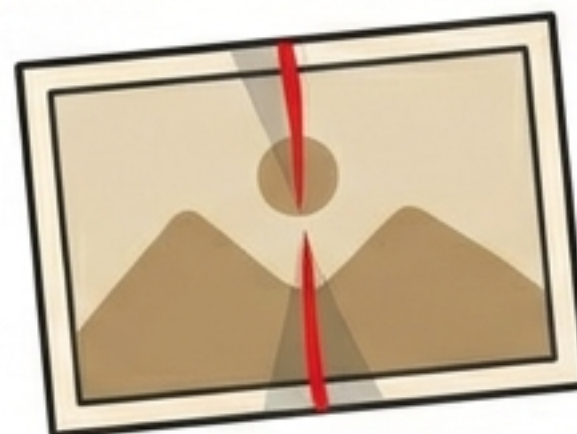

The Problem: Before digital cameras, printed photos would get damaged over time.

The Solution: We can scan them and retouch them to make them look new again!

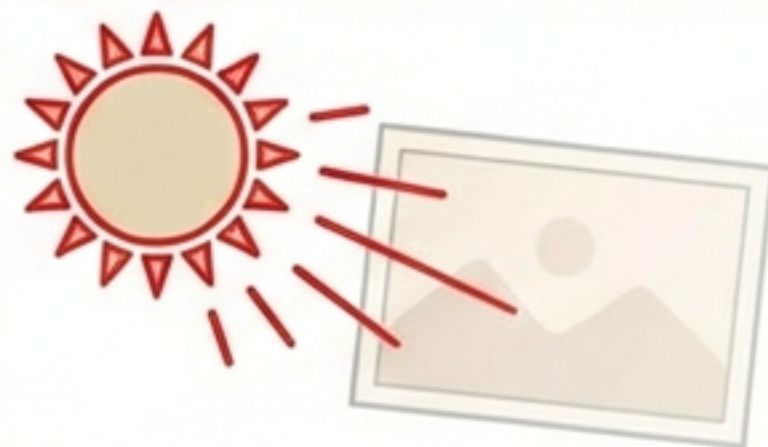

Enemies of Old Photos

Tears and scratches.

Fold marks.

Faded ink from sunlight.

Moisture damage.

We can fix ALL of these with the Heal and Clone tools!

Test Your Magic Knowledge

1. _____ refers to making small changes to improve an image.
2. The _____ tool requires you to select a source manually.
3. The _____ tool selects the source automatically.

Answers: 1. Retouching
2. Clone Stamp
3. Heal/Repair

Tech Flash: Vocabulary

Photo Retouch

A process to make minor changes to improve the appearance of an image.

Clone Stamp

Replaces a target area with a **MANUALLY** selected source.

Heal / Repair

Replaces a target area with an **AUTOMATICALLY** selected source.

You are now a Photo Wizard!

- ✦ **Next Steps:** Ask your parents for an old photo and try to fix it. Grandpa will be so happy to see his old memories looking new again!
- ✦ **Remember:** Retouching makes photos look cleaner and more attractive.
- ✦ See you in the next lesson!
