

Types of Files

02

Ryan, can you pick out the image files from all these files?

Good! There is another way to identify the types of files in a computer. Let me show you.

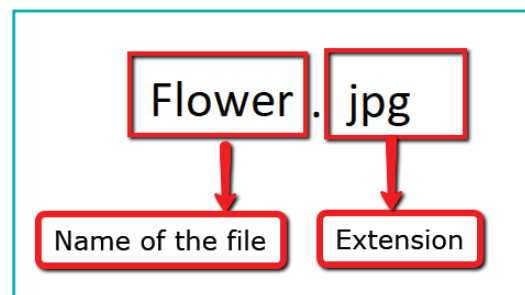

Yes, this one with the picture icon is an image file.

A computer can store different types of files. We can identify the type of file not only by the **icon**, but also by the **full name** of the file. Each file name has an extension that defines its file type. These are the last three or four letters of a filename after the dot.

Example:

'Flower.jpg' where '.jpg' tells us that the file is an image.

2. Types of Files

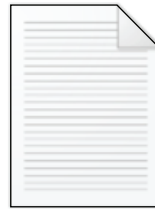

The different types of files are:

Flower.jpg

Dog Story.mp4

School.txt

NationalAnthem.mp3

Image, video, text and audio are some examples of different file types.

Exercise

Fill in the blanks.
