

Computer Peripherals

There are few things that a computer can't do with its basic parts. For example, we can't print a document on paper using CPU. We need a Printer for this task. Devices such as a Printer are called as **peripherals**.

Peripheral Device

A peripheral is a device connected to the computer from outside. Peripheral device adds ability to do new tasks to a computer.

Here are some examples of peripheral devices:

- | | | | |
|-------------|------------|---------------|----------|
| 1. Printer | 2. Scanner | 3. Headphones | 4. UPS |
| 5. Speakers | 6. Webcam | 7. Keyboard | 8. Mouse |

Exercise

 State whether true or false

- 1 A peripheral is a device connected to the computer from outside.

 _____

- 2 A Printer is not a peripheral device.

 _____

Let's learn more about peripheral devices:

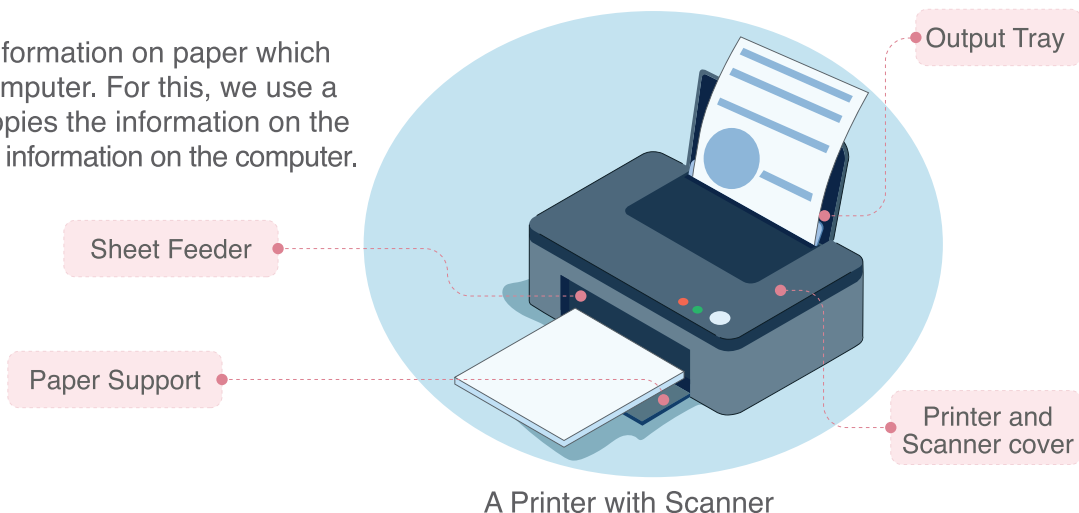

Printer

We create documents on our computers. These can be word documents or images, or both. To put that information on paper, we use a printer. It uses ink to print our chosen document.

4. Computer Peripherals

Scanner

Sometimes, we have information on paper which we must send to the computer. For this, we use a scanner. This device copies the information on the paper. Then it saves this information on the computer.

Healthy Practices:

Printer

- Use a printer only when an adult is around.

- Papers are made of wood from trees. Do not print anything on paper unless it is necessary. As wasting of paper is wasting of trees.
- Do not put anything in the printer **sheet feeder** other than paper.

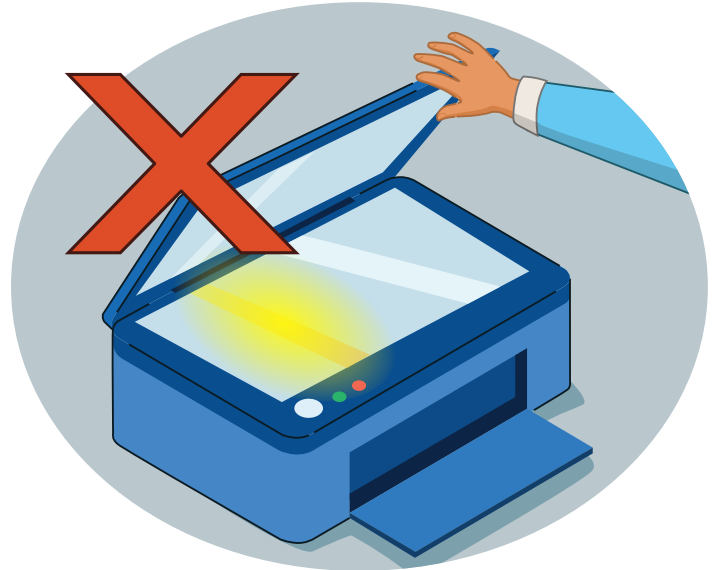

- Do not put pressure on any part of the printer.
- If paper gets stuck in the printer, ask an adult to help.

Bytes

A Scanner and printer can be parts of a single device.

Scanner

- Use a scanner only when an adult is around.
- Do not scan body parts in the scanner.
- Do not look into the scanner light closely. It can be harmful to your eyes.
- Always close the scanner cover when the device is in use.

Headphones

Headphones and speakers are devices we use to listen to sounds and music.

We use headphones to listen to music or sounds without disturbing others. These are used when only one person wants to listen to something. Headphones can be wired or wireless.

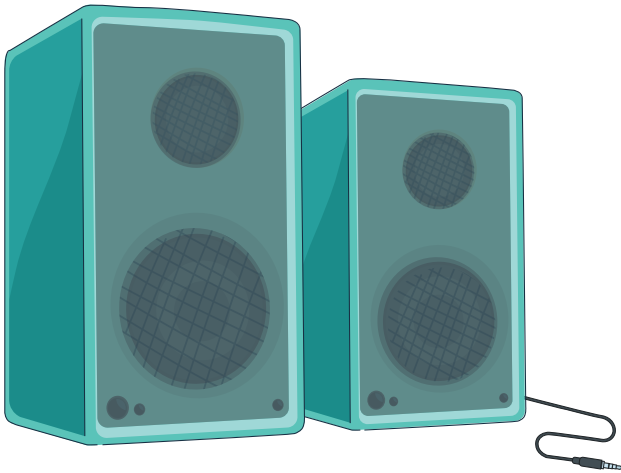

Wired Headphones

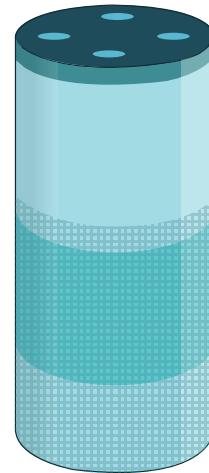

Wireless Headphone

Speakers

Speakers are made to play a sound or music loud enough to fill a room. Speakers can be wired or wireless.

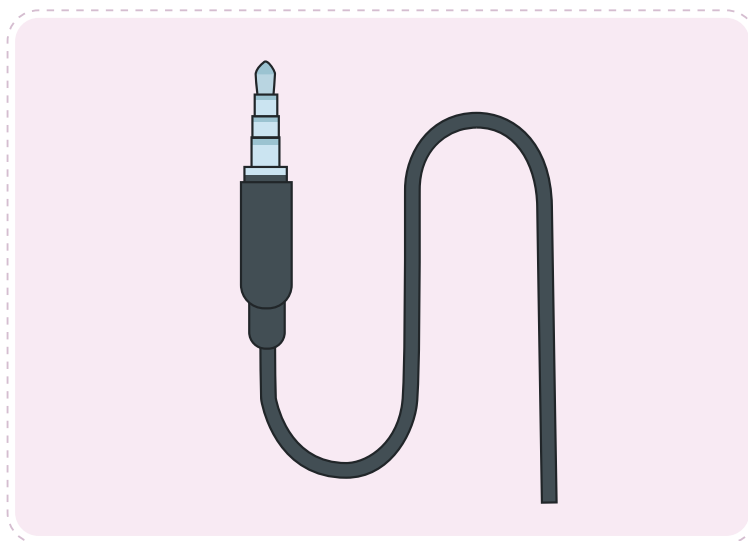

Wired Speaker

Wireless Speaker

Wired speakers are connected to the computer using a cable with audio jack or USB.

Audio Jack

Healthy Practices:

- Do not keep the speaker volume too high.
- Loud noise can be harmful to your ears. Others around you may not like it.
- Do not poke the speakers with any objects. It may damage the speakers.

- Do not use headphones on the street.
- Do not use headphones for long durations. It may result in partial hearing loss and may cause headache.

Exercise

 **Fill in the blanks.**

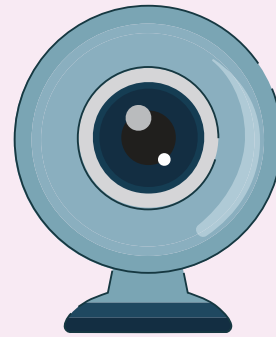

- 3 _____ are used to listen sounds and music without disturbing others.
- 4 Speakers can be _____ or _____.
- 5 _____ copies information from a piece of paper and saves it on the computer.

Bytes

A cable is a wire protected with cover of rubber or plastic.

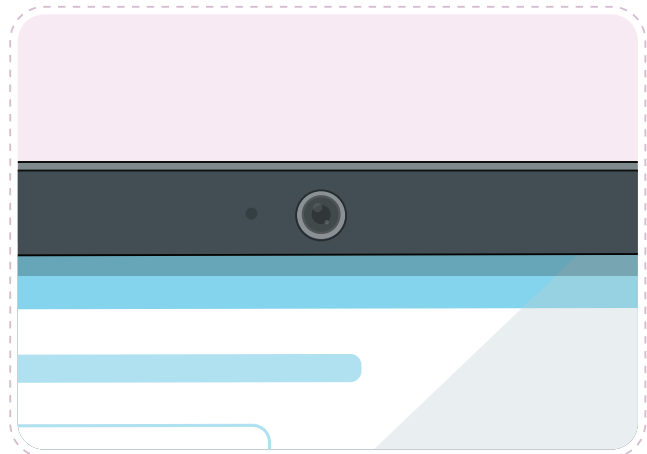

Webcam

The Webcam is a camera connected to a computer. It is used for taking pictures and making videos. We can also use it to video call other people.

Webcam connected to computer

In a laptop, the webcam is part of the screen panel placed above the screen. It is not a separate device.

Webcam of laptop

Healthy Practices:

- Always take permission from a person before taking their picture.
- Do not touch the camera lens.
- Clean the camera lens using a dry cloth only. Do not put water on the camera.

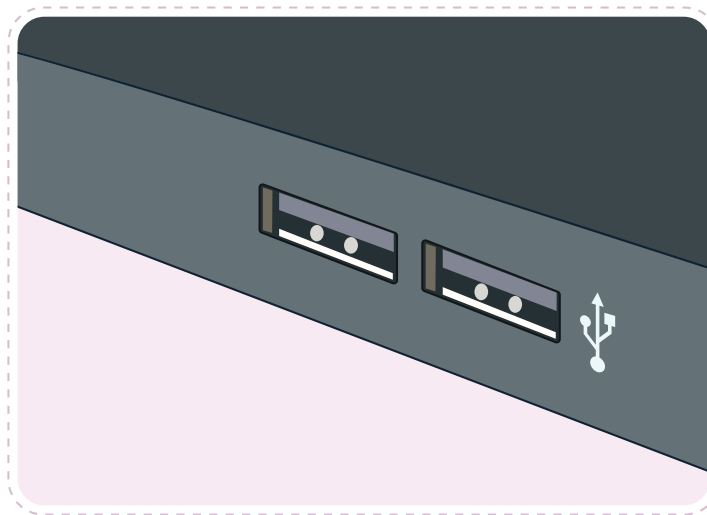

4. Computer Peripherals

USB

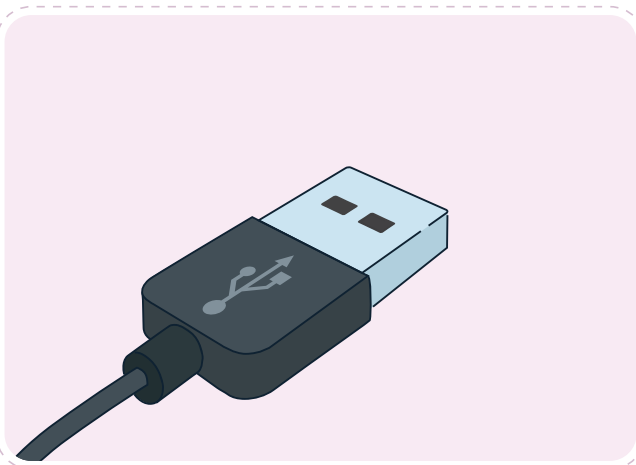

USB Port and Cable

USB stands for Universal Serial Bus. It is a port on the computer used to transfer data between two different devices. We use USB cables to connect two different devices. The symbol of a USB port is .

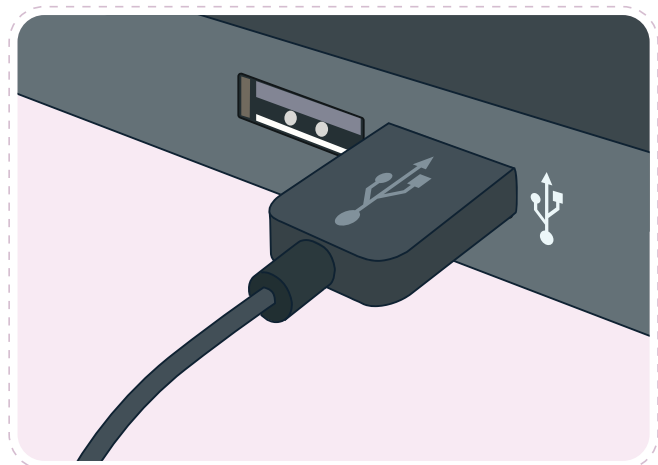

USB cable is also used to charge smartphone batteries.

USB Port

USB Cable

USB port and cable connected

Bytes

The USB was invented by an Indian, named Ajay Bhatt.

4. Computer Peripherals

Flash Drive

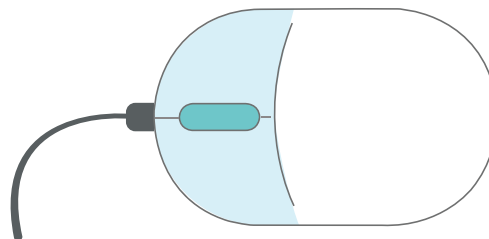

- Flash drive is also called as USB drive.
- It is used to transfer data from one device to another.
- It connects to a USB port on any device.
- Flash drives are small and can be carried anywhere easily.
- They can be used to save information.

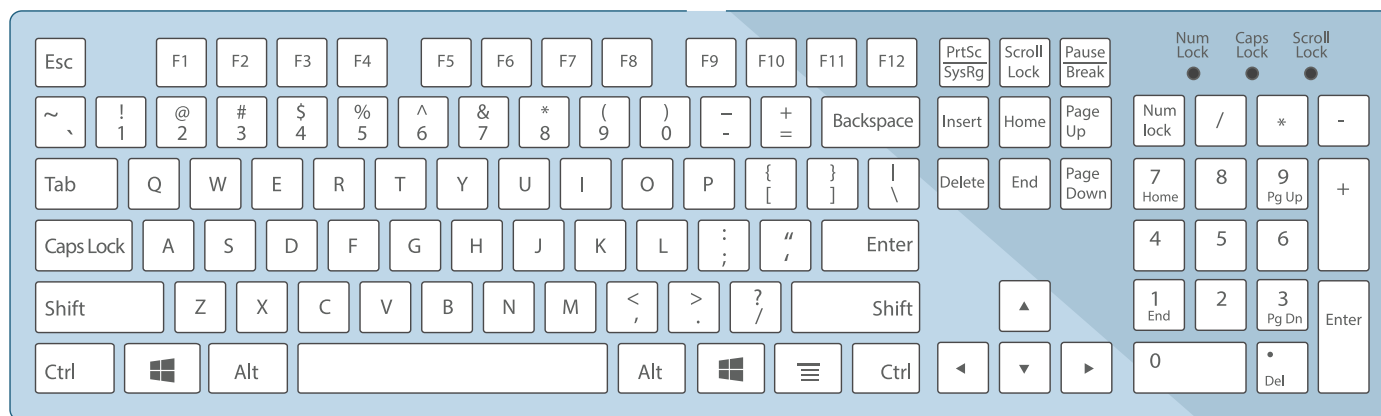

Flash Drive

Mouse and Keyboard

A Mouse and keyboard are also peripheral devices. They can be connected to a computer using a USB cable.

Mouse

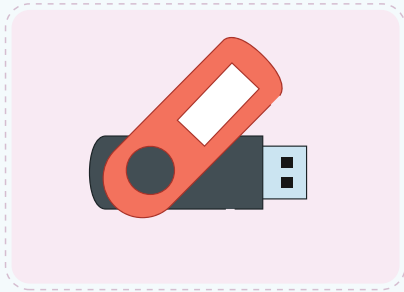

Keyboard

Bytes

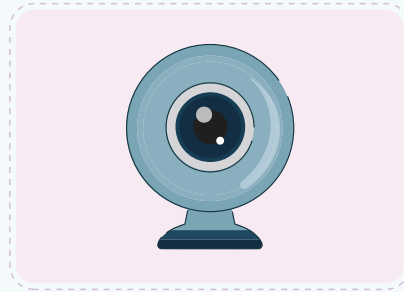

A Keyboard, mouse, flash drive and smartphone can connect to a computer using USB port.

Exercise

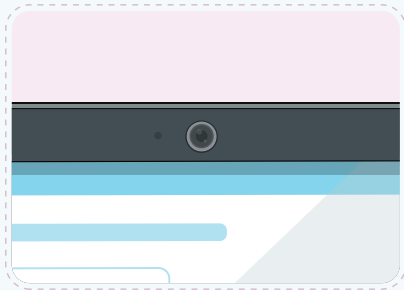

6 Identify and write names of the following:

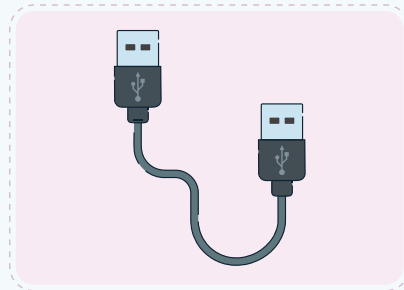

a

b

c

d

Tick mark ☒ the correct answer

7 The symbol of USB port is _____

a. ☐

b. ☐

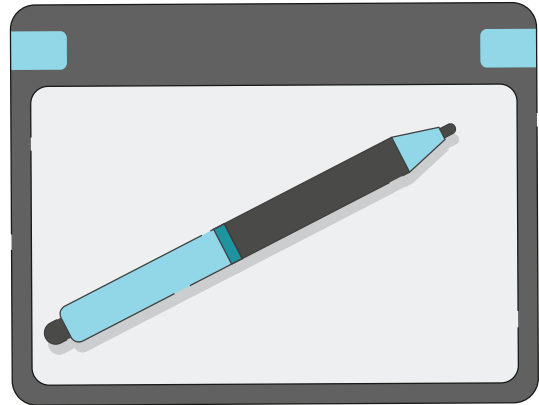

c. ☐

8 The Mouse and Keyboard connect to a computer using a _____

 a. USB Drive ☐ b. USB Cable ☐ c. Audio Jack ☐

Pen Tablet

Just like we draw on paper with a pencil, we use pen tablet to draw on a computer. The tablet connects to the computer using a USB cable.

UPS

- UPS stands for Uninterrupted Power Supply. This is a device used to supply electric power to a computer.
- It is useful when electric power shuts off suddenly.
- When electric power suddenly shuts off, the computer turns off. If this happens, we can lose data from the computer.
- A UPS stops the computer from suddenly turning off. It gives us time to save information and shut down the computer properly.
- A laptop does not require a UPS, as it has runs on battery.

UPS

Exercise

9 Which device will you use to do following tasks

a. Draw a picture of a monkey on computer

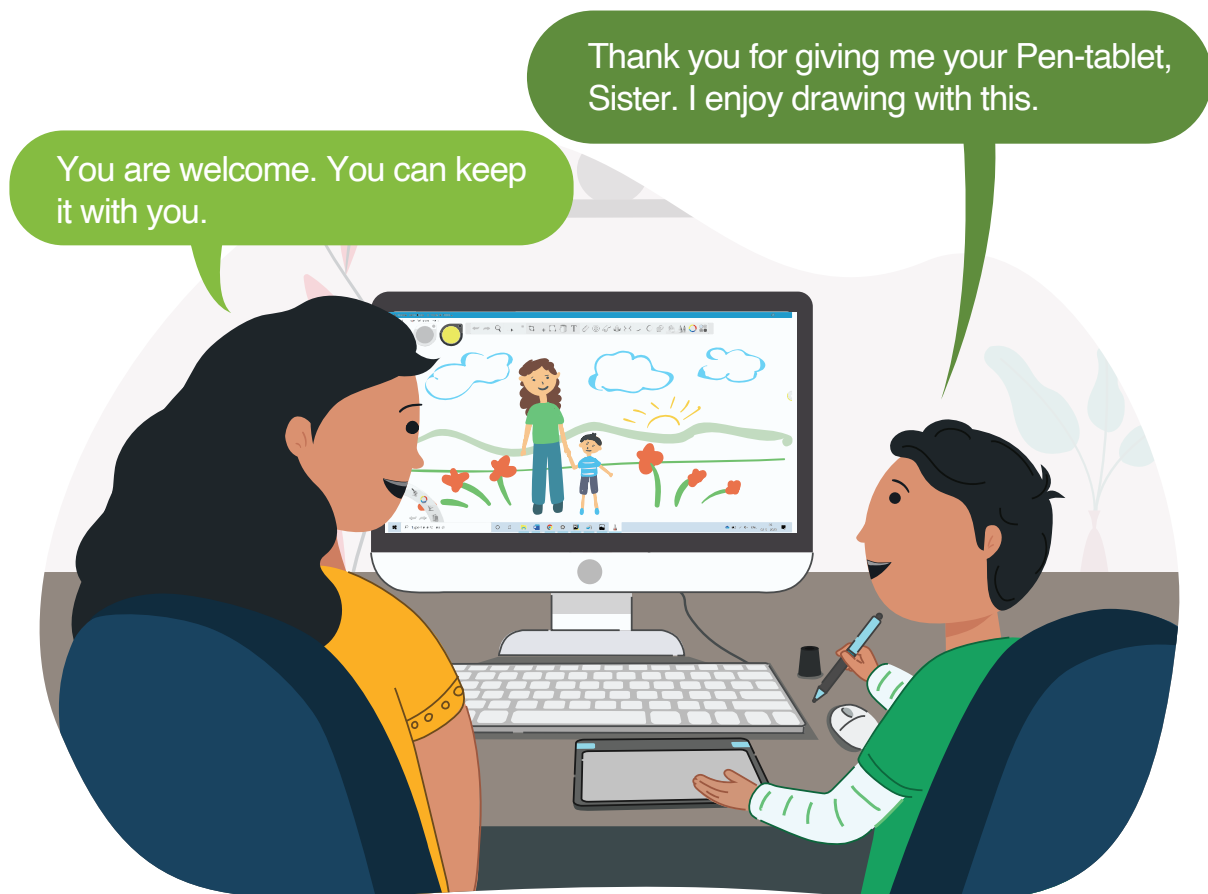

▲ _____

b. To supply electric power during power cut

▲ _____

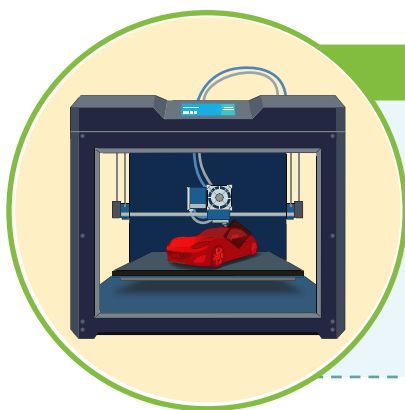

c. To save and carry information from one device to another

▲ _____

Tech Flash

- 1. UPS** : Uninterrupted Power Supply is a device that serves as a backup in case of power outage.
- 2. Printer** : We can print hard copies of files and images using this device.
- 3. Scanner** : We can convert documents and images from paper to digital using scanner.
- 4. Webcam** : Webcam is a device we can use to click pictures and record videos on a computer. We can also use them for video calling.
- 5. USB Port** : This is a port used with a USB cable to transfer information.
- 6. USB Cable** : A USB cable is used to transfer information and connect devices

Future Tech

3D Printer

A printer prints text and image on a paper. A 3D printer prints objects using computer aided design model.

For example: A printer can only print a picture of a car, but a 3D printer can print a model of a car.
